#### Proposal content

- ☑ Project Proposal Checklist: this form; one for each proposal
- ☑ Project Proposal Form: Specific to category/subcategory (10-page limit)
- Appendices: templates, forms, exhibits and supporting/supplemental documentation for scoring.

#### Institutional priority

☑ Institutional Priority Form. Sent separately (not in this packet).

Check the corresponding boxes below if the proposed project meets the minimum threshold or if the item listed is provided in the proposal submittal.

#### Mi

lini	mum thresholds
$\boxtimes$	Project is not an exclusive enterprise function such as a bookstore, dormitory, or contract food service.
$\boxtimes$	Project meets LEED Silver Standard requirements.
$\boxtimes$	Institution has a greenhouse gas emissions reduction policy in place in accordance with RCW 70A.45.050 and vehicle emissions reduction policy in place per RCW 47.01.440 or RCW 43.160.020 as applicable.
	A complete predesign report was submitted to OFM by July 1, 2022 and approved.
	Growth proposals: Based on solid enrollment projections and is more cost-effectively providing enrollment access than alternatives such as university centers and distance learning.
	Renovation proposals: Project should cost between $60-80\%$ of current replacement value and extend the useful life of the facility by at least 25 years.
	Acquisition proposals: Land acquisition is not related to a current facility funding request.
$\boxtimes$	Infrastructure proposals: Project is not a facility repair project.
$\boxtimes$	Stand-alone, infrastructure and acquisition proposals is a single project requesting funds for one

2022 Higher Education Project Proposal Form

INSTITUTION	CAMPUS
Washington State University	Pullman, WA
PROJECT TITLE	
Knott Dairy Infrastructure	

#### SUMMARY NARRATIVE

## **§** Problem statement (short description of the project – the needs and the benefits)

Washington State University requests \$10 million in the 2023-25 capital budget for a standalone infrastructure project at the Knott Dairy Center, located seven miles south of the Pullman campus. This request addresses the most crucial areas required for safety, continuity of operations and program growth.

The Knott Dairy Center is a critical resource utilized for teaching, research, and extension. It is also a key source for milk production for Cougar cheeses and ice cream that provides unique learning opportunities for WSU students and faculty, while showcasing the program to the public. However, the Knott Dairy Center does not meet modern standards to optimally reflect the excellence that WSU represents and expects.

Required infrastructure renewal at the Knott Dairy Center includes (in order of priority):

- Replacement of animal housing facilities that have failing structural components, risking the welfare of the animals along with the students and staff who care for them.
- Replacement of infrastructure components of the dairy, including electrical, telecommunications, water, sewer, and animal fencing to be able to support current and future dairy operations, provide redundancy, and allow for the use of modernized equipment.
- Improvement of low-stress animal handling and student/staff interaction points to ensure safety of individuals and best practices for animal movement.
- Replacement of structures that are now more than 60-years old to allow the program to increase the
  herd size to improve the economics of the facility and the student experience while fostering
  research activities to further the advancement of the dairy industry.

# **§** History of the project or facility

See **Figure 1** – antiquated milking parlor.

The dairy is challenged daily with limitations and interruptions due to aging water, sewer, and electrical infrastructure. There is a greater potential for bacterial contamination of milk, including coliforms. The structural integrity of existing facilities also poses serious risk to safety and operations. There is insufficient electrical capacity to provide for installation and use of modern analytical equipment in most areas. The existing power and water delivery systems also limit the dairy's ability to improve the utilization of the surrounding pastures.

Figure 1 – milking parlor with 40-year-old equipment

The dairy industry in the state of Washington is continually seeking graduates from WSU who are trained in modern techniques, and meeting this need is key to WSU's land-grant mission. The extent of deferred maintenance at the Knott Dairy Center adversely impacts the university's ability to attract the finest undergraduate and graduate students, in that it limits effective hands-on education and experience in best care and production practices. The Knott Dairy Center's lack of capital investment in modern technology and infrastructure imperils its mission to provide value to the students, staff, and dairy industry in the state of Washington.

## **§** University programs addressed or encompassed by the project

University programs encompassed by this project include Animal Sciences, Veterinary Medicine, Campus Veterinary office, Food Sciences, WSU Creamery, and the WSU Office of Research Assurances. Additionally, the Knott Dairy Center facilitates one of only four national dairy cooperatives for students, Cooperative University Dairy Students (CUDS), a program important to alumni and the dairy industry for providing hands-on, real-world training for future dairy managers.

Investment in the dairy will foster and enhance collaboration in agricultural sustainability initiatives including soil, water, crops, air quality, technology, and environmental management. Sustainability in these areas will require interdisciplinary efforts that include economic assessments, animal health, animal welfare, nutrition, and engineering. Capital investment will allow these existing programs access to facilities that are amenable to performing critical research.

#### GENERAL CATEGORY SCORING CRITERIA

## 1. Significant health, safety, and code issues

# A. Identify whether the project is needed to bring the facility within current life safety (including seismic and ADA), energy, utilities, or transportation code requirements.

Yes, this project will address the non-compliant life safety and ADA issues at the facility. The Knott Dairy Center was originally constructed in 1959 for a herd size of 80 lactating head. Since then, the facility has been in continuous operation and has increased the lactating herd size to 180, a significant increase with little change to the original configuration or infrastructure components. With the increased herd size there is a need for greater interaction between humans and livestock within confined and antiquated spaces which creates unacceptable risks for injury where escapement is challenging. The

2022 Higher Education Project Proposal Form

parlor requires exiting livestock to make an unnatural hard turn and share space with KDC/CUDS employees. With the need for twice daily milking of a much larger number of cattle, there is reduced time for animal movement and cleaning. The shortened time-frame for cleaning has led to an unacceptable increase in coliform counts in the milk which requires immediate mitigation.

Knott Dairy Center is regularly inspected by representatives from the state Department of Agriculture, WSU's Institutional Animal Care and Use Committee and Association for Assessment and Accreditation of Laboratory Animal Care, International.

During AAALAC reviews in 2018 and 2021 there were concerns over the condition of the dry cow barn, an essential component at the dairy that provides necessary shelter and protection for the dairy cattle when they are not lactating. Structural decline was noted at the supporting posts at the ground level, which adds to the difficulty in cleaning and re-bedding of the facility, contributing to the decay. Substandard infrastructure puts the facility at risk of a mandated closure. This project will address the structural issues and would allow for improved operations to minimize deterioration in the future.

# B. Clearly identify the applicable standard or code and describe how the project will improve consistency with it. Provide selected supporting documentation in appendix and reference in the body of the proposal.

## Life Safety Requirements

The Knott Dairy Center is classified as a **Group U Occupancy** under the International Building Code (IBC 2021) which encompasses livestock shelters or buildings, shade structures, milking barns, barns, and stables.

Improvements to the facility will include meeting all applicable codes and regulations such as the following:

- IBC C102.2 and C102.3 One-story and Two-story unlimited area. The area of a one-story Group U
  agricultural building shall not be limited if the building is surrounded and adjoined by public ways or
  yards not less than 60 feet in width. In replacing existing structures, the correct placement shall
  meet this requirement or meet the size limitations.
- IBC C104.1 Exiting Facilities shall be provided in accordance with Chapters 10 and 11. Exceptions: 1) the maximum travel distance from any point in the building to an approved exit shall not exceed 300 feet. 2) One exit is required for each 15,000sf of area or fraction thereof. Exiting requirements will be improved with this project including the sections identified below.
- IBC Chapter 10 Means of Egress. Section 1003.2 The means of egress shall have a ceiling height of not less than 7 feet 6 inches above the finished floor.
- · IBC Chapter 10 Means of Egress. Section 1003.3 Protruding Objects. Protruding objects on circulation paths shall comply with the requirements of 1003.3.1 through 1003.3.4
- IBC Chapter 16 Structural Design. Section 1616.2.21 Structural Integrity of steel columns. There is evidence of structural deficiencies within several the barns that will need to be addressed with this project. See **Figure 2** structural column corrosion.

Figure 2 – corroded steel column in Building 402A pens

- IBC Chapter 9 Fire Protection and Life Safety Systems Section 903.2.11 states that in all occupancies other than Group U, an automatic sprinkler system shall be installed for building design or hazards in the locations set forth in Sections 903.2.11.1 6hrough 903.2.11.6.
- Although not required, the dairy has experienced a recent situation where a service vehicle caught fire and the only means to extinguish it was with a fire extinguisher. Fire hydrants are needed to serve the area, which is our highest priority in addressing the water system requirements.
- NFPA 72, Sections 18.4.1 and 18.4.3 Existing visual and audible fire alarm notifications that are found to be non-compliant will be addressed with this project.
- NFPA 72, Sections 17.5.3.1 and 17.5.3.2 Existing "spot" fire alarm coverage will be upgraded to improve the "selective" coverage requirements of the current code.

#### Accessibility Requirements

IBC Chapter 11 Accessibility. Section 1103.2.4 Utility Buildings. Group U occupancies are not required to comply with this chapter other than the following: 1) in agricultural buildings, access required to paved work areas and areas open to the general public. 2) private garages or carports that contain required accessible parking.

Since this project entails a public face, accessibility requirements to allow for observation and activities for students, faculty, and the public will be included.

#### ADA 2010 Standards:

- Section 702 Fire alarm systems will be upgraded to include appropriate ADA audible and visible alarms.
- Section 404 Existing door size, clearance and hardware do not comply with ADA requirements. This project will correct any non-compliant doors and install appropriate ADA hardware.

### 2. Evidence of increased repairs and/or service interruption

Identify prior facility repairs, work order repair history or contractor repair callouts, increased utility and/or maintenance costs, and/or system unreliability. Provide selected supporting documentation in appendix, and reference them in the body of the proposal.

#### History of Repairs and Service Calls

WSU has more than five years' worth of work requests and minor capital repairs for the Knott Dairy Center, see **Table 1**.

Over the past five years, WSU Facilities Services has received an average of nearly 85 reactive maintenance requests per year for Knott Dairy. The Maintenance Log Summary below shows the number of service calls addressed each year over the past five years (and the first half of 2022) and their associated cost (these do not include departmental repair expenditures that did not go through Facilities Services). See **Appendix B** for service requests.

Knott Dairy Maintenance Log Summary						
Year	Year Number of Calls Cost					
2017	61	\$175,907				
<b>2018</b> 56 \$47,706						
2019	\$103,041					
2020	71	\$53,287				
2021	111	\$140,000				
<b>2022 to date</b> 107 \$66,774						
<b>Totals</b> 533 \$586,715						

#### Table 1

As a result of these emergent issues, WSU has invested over \$580,000 into recent repairs at the dairy primarily in infrastructure, plus an additional \$2,500,000 in minor capital repairs for a new water reservoir tank, water system improvements, minor electrical improvements, and concrete flatwork for animal safety. See **Appendix C** for minor capital repair logs.

#### Interruptions of Service

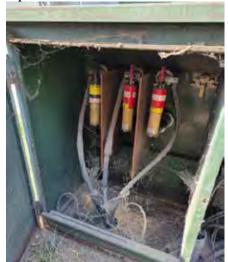

Interruptions of service happens on average two to three times a year and can take some time to respond to, being a remote site from central campus. When power outages occur, sometimes caused by wildlife or weather, the existing generator serves the milking parlor and residence above but not the rest of the facilities. The water holding tank can supply water via gravity for a maximum of three days, although the automatic waterers for cattle would not operate without power, nor does the electric fence for animal containment. Durations can last several hours and occasionally an entire day, threatening the care and well-being of the animals.

## 3. Impact on institutional operations without the infrastructure project

Describe how and the extent to which there would be an impact on existing operations and programs. Describe the potential impact on future, already funded or planned construction projects or program needs should this infrastructure project not occur.

The increasing deferred maintenance at the dairy has a serious impact to the operations of the Knott Dairy Center. Without this investment, the Knott Dairy Center is at risk of a mandated closure by the inspecting agencies. The impact will negatively affect the educational programs, industry research and the popular commodities produced by the creamery which promotes the program and the university's land-grant mission.

Failure of the structural integrity of our buildings poses clear risks to our WSU students, employees, and livestock. The use of the current facility places students and employees at risk of physical injury and the unexpected rise in bacterial contamination in milk poses an unacceptable health risk. Without improvements to the infrastructure at the dairy, the program would not be able to add modernized equipment to reflect the current industry standards. The electrical system is original and in need of replacement. The 12kv distribution is WSU owned and incurs regular reliability issues. **Photos below.** 

Photos of Existing electrical service to Knott Dairy Center

#### 4. Reasonable estimate

Provide as much detailed cost estimate information as possible, including documentation of professional assessment of costs (may contain opinions of external experts or experienced project management staff from the institution).

A detailed cost estimate for the Knott Dairy Center was developed by specialty professionals, Castellaw Kom Architects, Lewiston Idaho (**Appendix D**).

## 5. Engineering study

Identify whether there is a completed comprehensive engineering study, site survey and recommendations or opinion letter. Provide referenced supporting documentation in appendix.

A comprehensive engineering study was completed by Castellaw Kom Architects, the recommendations of this study have informed the basis of this request (**Appendix E**).

## 6. Support by planning

Describe the proposed project's relationship and relative importance to the institution's:

- A. Campus/facilities master plan
- B. Ongoing academic and/or research program need and strategic plan

A. It is necessary to address deferred maintenance issues at the dairy in 2023-25 to avoid catastrophic failures which could create significant risk to the execution of WSU's Facility Development Plan. WSU's capital plan reflects the university's continued commitment to reinvestment in existing facilities and infrastructure while also advancing programmatic priorities. It is focused on identifying and prioritizing capital projects that balance stewardship and renewal within a framework for responsible growth, as informed by WSU's Facility Development Plan (go.wsu.edu/WSUDevelopmentPlan2022).

Both the 10-year capital plan and the development plan recognize the urgent need to address a large and rapidly growing deferred maintenance backlog which has been identified as a significant risk to future operations at all the WSU campuses as they age.

B. The capital investment proposed here will allow Animal Sciences faculty to be competitive for external research funding and perform the essential applied research that the dairy industry, needs. This investment may also be used to leverage donor funding to further program growth and modernization.

Animal Sciences is a critical and high enrollment program within the College of Agricultural, Human and Natural Resource Sciences. It aligns with the university's land-grant mission and supports the dairy industry and economic growth. Animal Sciences aspires to be a leader in dairy production, livestock welfare and care, sustainability, and environmental stewardships. This will include development and use of livestock technology that reduces labor, improves animal care, and leads to advancement in reduction of greenhouse gases, water use, and nutrient use. Improved reproduction and milk production alongside decreased environmental impact and enhanced resource stewardship will be attainable through this investment. The facility investment will improve the safety of staff and students and ensure that there is increased capacity for safe interactions and observations of large livestock.

## 7. Resource efficiency and sustainability

Document project benefits associated with low-impact stormwater management techniques, improvements in energy and resource conservation, and use of renewable energy sources.

#### Stormwater Management

This project will address the manure handling system reliability and capacity to support the dairy operations and to protect surface waters. Commercial dairies can have a serious impact on stormwater quality with the introduction of animal waste and how it is managed. The Knott Dairy Center has seen an increase in the herd size over the years and has made improvements to the waste handling systems. The dairy was issued a Concentrated Animal Feeding Operation Permit (CAFO) in the 2006-2008 period due to contaminated stormwater discharges to surface waters from manure and lagoon holding areas. After improved facilities were constructed and it was demonstrated that there were no longer any discharges to surface waters over several years of operations, WSU was able to terminate the CAFO permit. With the increase in herd size and limited resources it could once again result in contaminated surface waters resulting in fines and requirement to obtain the CAFO permit again.

2022 Higher Education Project Proposal Form

## **Energy Conservation and Renewable Energy**

Improvements to the electrical infrastructure will conserve electrical usage and reduce greenhouse gases. To expand services in the outlying pastures, solar powered and or wind powered waterers will be considered in lieu of running a new electrical service.

POSSIBLE COSTS / BUDGET	20
SCHEDULE EXPECTATIONS	21
ACKNOWLEDGMENTS	22

### **EXECUTIVE SUMMARY**

#### INTRODUCTION

The WSU Animal Sciences Department (AS) has an obligation to train the next generation of livestock producers and industry leaders and conduct research that is relevant to the sustainability and growth of the livestock industry in Washington State, the Pacific Northwest, and the greater US. This study is the culmination of collaborative efforts between stakeholders, faculty, staff, and students to begin the fulfillment of that obligation. Through the process of this study, a strategic investment has been identified, that once executed, will offer better and more relevant hands-on learning opportunities for students and perform essential research for the livestock industry to address efficiency, sustainability and profitability moving forward.

#### **SCOPE OF STUDY**

The premise of this study was to identify a project scope and probable cost for development of the existing Knott Dairy Center (KDC) for the College of Agricultural, Human, and Natural Resource Sciences (CAHNRS) on the Washington State University campus in Pullman, WA. Per the Animal Sciences Department (AS), the KDC is in need of repair and modernization to allow training of conventional and robotic dairy techniques, increase production capacity, improve facilities for the shelter and care of their livestock, and improve utilities including electrical, data, water, and manure handling. Their is a strong desire to make the KDC better reflect the professional image of excellence that AS wishes to portray.

This document has been developed by the study team to be used to guide the planning of the proposed master plan for the dairy center. It is expected to be a living document that will evolve over time. Included is scope of work (program and conceptual design), potential cost, and rough schedule expectations.

#### PROGRAMMED SPACES

The Knott Dairy Center promotes three levels of acadamia which include teaching, research and a student ran club. The current facilities lack the technology needed to support the modern day research needed and prepare students for what they will encounter in the industry. The Cooperative University Dairy Students (CUDS) is a student led program with academic credits that requires independent control from the rest of the KDC herd to be successful.

In order to meet the current and future academic needs of the dairy, the numerous facilities that make up the KDC are in need of an extensive upgrade and modernization. The following is a summary of facilities / spaces expected to be included in the master plan:

- Calving Barn
- Heifer Barn
- Dry Cow Barn
- Lactating Cow Barn
- Close Up Barn / Pens
- Vet Med Space (main and satellite labs)
- Milking Parlor / new robotic milkers.
- Milk storage (redundant safety system).
- Classroom, Offices, and Residence

#### **CONCEPTUAL DESIGN**

The conceptual design of this study has identified several phases to best implement the needed improvements. A future master plan was developed and then overlayed with top priority items to determine the best order for phasing the work. Each phase builds on work from previous phases required to keep the dairy fully operational during construction.

#### POSSIBLE COSTS/BUDGET

Possible construction and project costs have been developed for the conceptual design. The project is expected to be administered by WSU Facility Services following established state and institutional requirements. The following is a summary of identified cost allowances for this project:

	PHASE I	PHASE II	PHASE III	PHASE IV
Programmed Construction Costs (construction costs 75% of project costs)	\$7,352,000	\$10,576,482	\$4,712,753	\$17,455,059
Anticipated Project Costs	\$2,426,160	\$3,490,239	\$1,555,208	\$1,446,176
Total Project Budget Range (range for conceptual design unknowns / 3-5 years inflation)	\$9.7M - \$12.2M	\$14M-\$17.6M	\$6.3M-\$7.8M	\$23M-\$29M

#### **POSSIBLE SCHEDULE**

A possible project schedule by phase was reviewed as part of this analysis. It is anticipated that Phase 1 and Phase 2 would occur within 5 years of this study with Phase 3 & Phase 4 to follow consecutively afterwards as funding becomes available:

Phase I: 2023-2025
 Phase II: 2025-2027
 Phase III: TBD
 Phase IV: TBD

## **EXISTING SITE ANALYSIS**

#### **EXISTING SITE OVERVIEW**

This site analysis portion of the study conducted an in-depth review of the existing site layout and overall proximity of existing structures to one another. A review of the current flow of animals was analyzed to identify areas of concern that need addressed. The team also met with WSU Facilities to review know utilities in the area and potential improvements that need to be considered.

#### **EXISTING FACILITIES**

The KDC consists of 13 separate structures spread across the site, with 7 of the structures specifically used for housing of animals. Currently the herd size exceeds the originally designed capacity for the dairy which has resulted in mixed use between several structures and poor flow of animals across the site. Herding and containment of animals utilizes hot-wire electric fence, posing safety concerns for the staff and students working at the center.

#### **EXISTING UTILITIES**

The following existing utilities have been reviewed with WSU Facilities.

#### **Domestic Water**

- Majority of water piping has been upgraded in the last few years with new HDPE water lines (4" & 2").
- Capacity has been up-sized for additional load including providing water to pasture troughs.
- Holding tank was upgraded from 40 Gallons to 150 gallons in last few years.

#### Storm / Sanitary Sewer

- Cattle waste management consists of a flume system to separate waste and collect solids to transport to WSU's compost facility on the Pullman campus. Liquids are diverted to settling ponds.
- Human waste (Milking Parlor & Residence) is on septic system.
- Little is know about both systems and may require work.

#### **Electrical**

Infrastructure upgrades currently being processed by WSU facilities for future project.

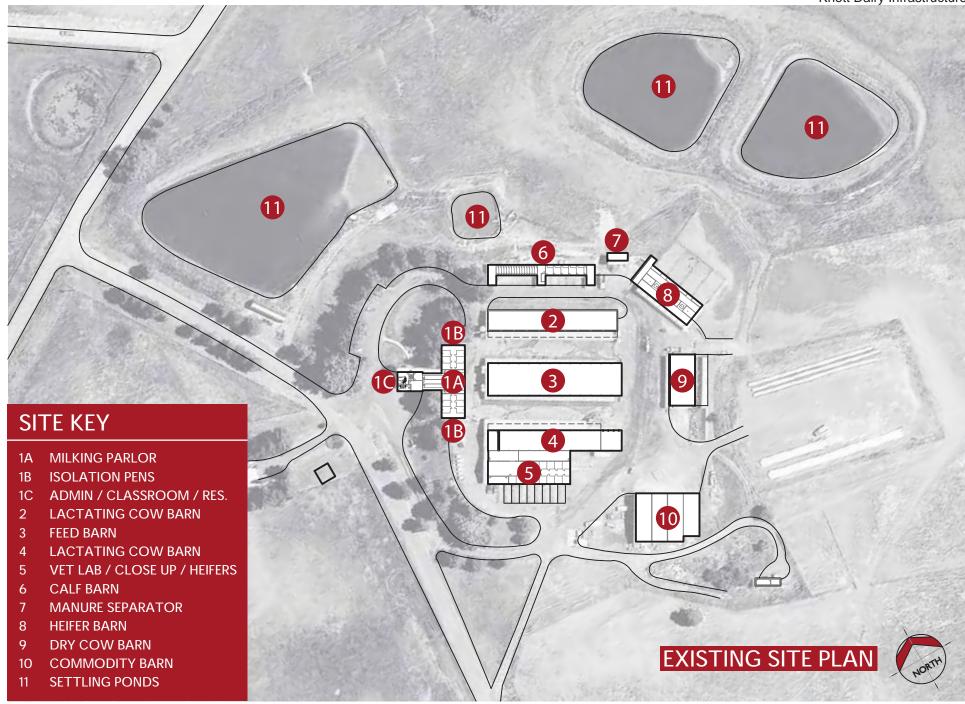

#### <u>Data</u>

- Upgraded data infrastructure is top priority for KDC.
- Current system is all wireless and not reliable.
- Running fiber optic to site or mix of hardwire and wireless system is needed in order to achieve desired modernization of dairy.

#### Gas Service

No gas service available for this area.

### PROGRAM REQUIREMENTS

#### **HERD DISTRIBUTION**

The following herd size distribution has been closely coordinated with WSU Animal Sciences Department administration and staff to identify facility needs based on the desired herd size of the Knott Dairy Center. As basis-of-design, the faculty shared distribution numbers for a 1000 cow dairy that was then converted to meet the current and projected herd sizes. Currently, the KDC herd is approximately 425 head with 180 lactating cows. It is desired to reach a herd size of 220 lactating cows which meets the milk demand of the WSU creamery. Although it may be impractical for the KDC, the industry design standard advises facilities be designed to 140% of the desired herd size to account for variations in the calving rate of the herd. This has been taken into account for the long term master by providing ample space on site for future growth with initial phases aimed at providing closer to the actual desired herd size.

Item	<b>Current Herd Size</b>	<b>Desired Herd Size</b>	140% of Desired Size
Female Calves			
Birth to 2 mo	17	21	30
3-5 mo	26	32	45
Total Calves	43	53	74
Heifers			
6-8 mo	26	32	45
9-12 mo	35	42	59
13-15 mo	26	32	45
16-22 mo	61	74	104
60 -22 d before calving	11	13	19
close-up heifers (21 d before calving)	7	8	11
Total Heifers	165	201	282
Cows			
Dry cows (60-22 d before calving)	23	28	39
Close-up cows (21 d before calving)	14	17	24
Total Dry cows	37	45	63
First-lactation cows	61	74	104
Lactating cows (≥ second lactation)	119	146	204
Total Lactating cows	180	220	308
Total Cows	217	265	371
Total Head	425	520	727

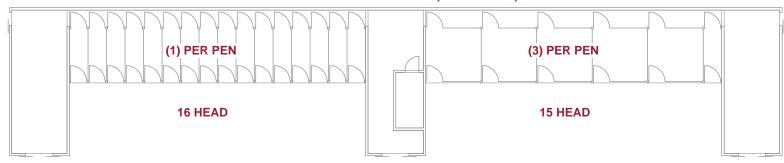

#### **CALF BARN**

**Programmed SF:** 3,360 SF Existing Space SF: 3,328 SF

#### **Notes**

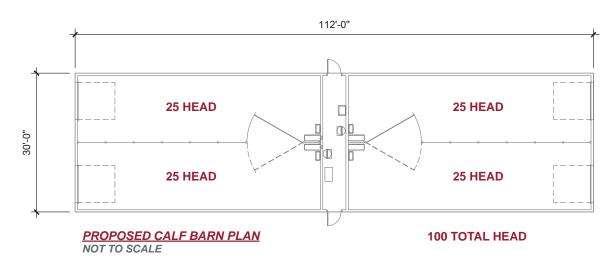

- Current arrangement houses 1-3 calves per pen with individual manual feeding.
- Anticipated design to implement automatic group feeding with 25 head per pen.
- Projected design size to be 30 heifer calves.
- Additional space accounted for separate CUDS pens, potential research trials, and possible bull calves program.

#### 31 TOTAL HEAD + HUTCHES (NOT SHOWN)

#### **EXISTING CALF BARN PLAN**

**NOT TO SCALE** 

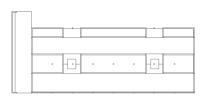

#### **HEIFER / DRY COW BARN**

**Programmed SF:** 38,750 SF Existing Space SF: 7,200 SF

#### **Notes**

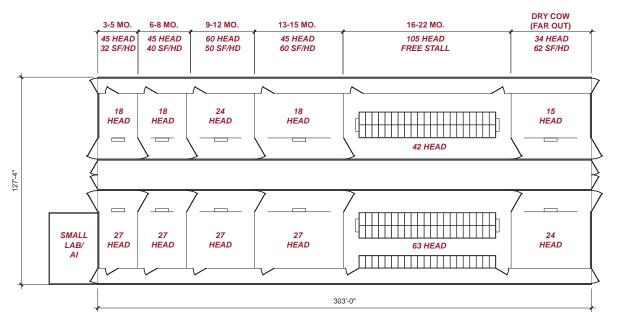

- Heifer barn is undersized for current herd resulting in heifers being housed in other barns across the site.
- Current dry cow barn failed the most recent AALAC inspection and requires repairs to regain compliance.

#### **EXISTING HEIFER BARN** NOT TO SCALE

#### **EXISTING DRY COW BARN NOT TO SCALE**

PROPOSED HEIFER / DRY COW BARN

**NOT TO SCALE** 

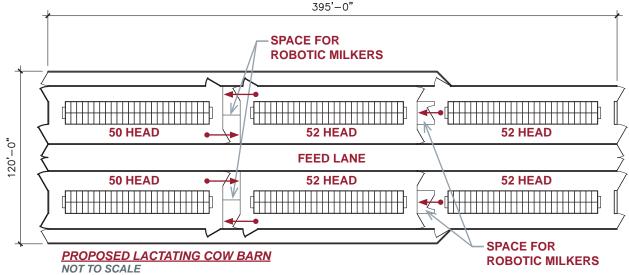

#### **LACTATING COW BARN**

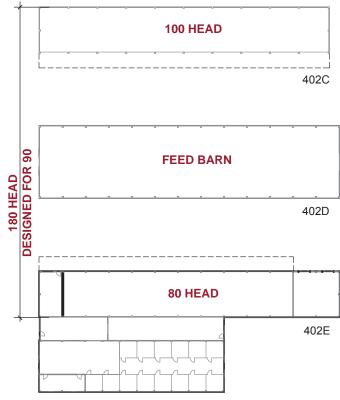

Programmed SF: 44,000 SF

Existing Space SF: 46,200 SF (including exterior open space)

#### **Notes**

- Current complex of barns were designed for 90 lactating cows but currently hold 180 head.
- Existing covered area is undersized and not properly ventilated.
- Current configuration uses hot-wire for containment of animals which poses a safety concern.
- A teaching space is needed with room for students to gather and view opperation.
- Desire to provide robotic milkers in the future does not work with current layout.

EXISTING LACTATING COW BARN NOT TO SCALE

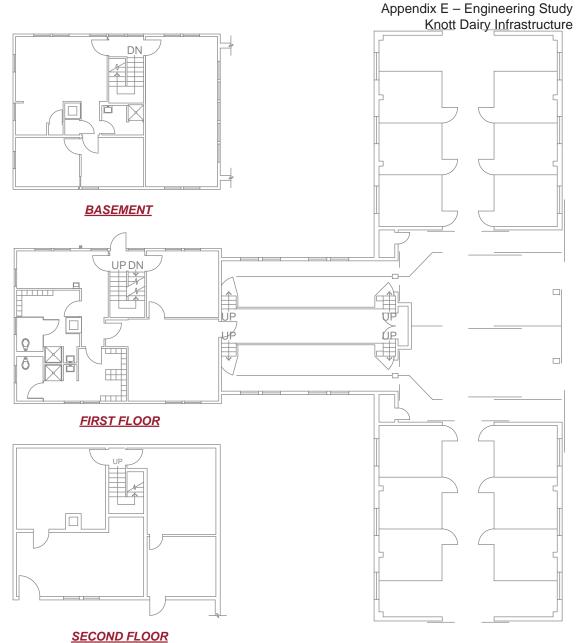

#### OFFICE AND MILK PARLOR

Existing Space SF: 8,500 SF

#### **Notes**

- Existing building consists of milking parlor, milk storage, office / admin space, locker rooms, classroom and residence.
- Parlor only allows for twice a day milking (most dairies are 3x) due to limitations in both space and equipment.
- Parlor access for both people and animals is a concern. Hot wire electric fence is used to guide cows into parlor with no separate space for entering and existing. Staff entrance passes through pens which poses a danger and should be independent.
- Sick pens located adjacent to milking parlor show potential structural issues and programatically should not be located in this close proximity of healthy animals.
- Milk storage is down to a single tank with no redundancy

EXISTING OFFICE AND MILK PARLOR NOT TO SCALE

# CODE CONSIDERATIONS

An initial code analysis of the 2018 International Building Code (IBC) has identified a number of code considerations that should be further examined during project development. Building codes that have been adopted by the State of Washington at the time of building permit review will need to be the basis of project design. Type of construction, allowable building area, adjacent structures separation, fire sprinklers, fire flow, and exiting all appear to be issues that will require close examination as the project design is further developed. Building code requirements for construction change over time. This document provides for master planning considerations making it will be important to provide an updated code analysis prior to each phase of work. The following is a summary of code limitations identified at this time for future consideration:

#### **AUTHORITY HAVING JURISDICTION (AHJ)**

Early coordination with the Authority having Jurisdiction should occur during the design process to fully identify building classifications and code requirements that will be required on the project (each phase & final completion).

#### OCCUPANCY CLASSIFICATION

The obvious classification of the buildings at the WSU Knott Dairy would be a U Occupancy (barns, livestock shelters, stables). Often an AHJ will classify university ag research buildings as a B Occupancy due to the higher education activities provided by the facility. Additionally, the International Building Code includes 'Appendix C, Group U Agriculture Buildings'. Use of an appendix to the IBC is not mandatory unless specifically adopted by the AHJ. It appears that Washington State has currently not adopted Appendix C. Some AHJ officials will still consult an appendix to the code that has not been adopted to provide direction.

#### TYPE OF CONSTRUCTION

It appears that a number of Types of Construction could be used for the facility depending on the AHJ occupancy classification and use of Appendix C. Type VB (combustible construction) might be considered if Appendix C is used for direction due to the possibility of 'unlimited building area'. Other construction types to consider per the IBC are Type IB and IIB (non-combustible construction).

#### **BUILDING SEPARATION**

Building placement on site is required to follow the code minimum distance between buildings based on occupancy and construction classification. The required building separation also could vary considerably depending on AHJ determinations. This could vary between no required separation to 30 or 60 feet of separation being required. It appears that there are a number of code gymnastics that can be considered by the designer to meet building code limitations.

#### **AUTOMATIC FIRE SPRINKLERS**

The use of an automatic fire sprinkler system (AFSS) has the advantage of allowing the basic allowable area per floor to be increased significantly over 300% in a single-story building.

Large area non-fire sprinklered building(s) appear to be allowed by the IBC depending on roof height selected, building classification, type of construction, fire protection and whether or not Appendix C is used for code determination direction.

If automatic fire sprinklers are to be considered as a part of the project design, well pressures and water storage options will need to be considered as an effective system is designed.

#### NFPA CONSIDERATIONS

In addition to the International Code Council family of building codes, National Fire Protection Association (NFPA) requirements will need to be considered. Based on the contents of the buildings the NFPA should classify these buildings as a moderate hazard. Additionally, the NPFA does not have a corresponding classification to the IBC U Occupancy which indicates close coordination with the fire marshal will be critical to project success.

#### **ALLOWABLE BUILDING AREA**

Based on building classification, type of construction, roof height, fire protection and whether Appendix C is used, the allowable area will be identified. There appear to be a number of alternative code paths for the designer to pursue.

#### **EGRESS**

Due to the low egress occupant load of agricultural buildings (300 sf per occupant), it appears that only 2 exits would be required from any building. The conceptual design has taken this into account and has also provided for the required remoteness of exits.

#### **ACCESSIBILITY**

IBC Chapter 11 and the Americans with Disabilities Accessible Guidelines (ADA-AG) require that the facility includes accessible features. It should be noted that U Occupancies require accessibility as follows: 1) In ag buildings, access is required to paved work areas and areas open to the public, and 2) areas that contain required accessible parking. The conceptual design included in the study has taken into account specific accessible requirements.

#### **FUTURE ADDITION(S)**

Master planning, phasing and future improvements anticipated should be considered when initial improvements are made so that future needs can be easily met. This approach would provide the college with future growth opportunities with little redesign of improvements previously completed.

# CONCEPTUAL DESIGN

#### CONCEPT DEVELOPMENT

The conceptual design has been developed to be responsive to the Washington State livestock agricultural community. The Animal Sciences Department (AS) is committed to building their reputation for excellence by modernizing the Knott Dairy Center to meet the research and educational needs of the industry. It is desired to reconfigure the current layout to create a more efficient flow of animals and provide a safer environment for the staff, researchers, and students running the center.

The future vision of the KDC includes modernized barns with robotic feeders and milkers that will provide the precision required for collecting research data. In order to accomplish the much needed improvements, a long term master plan has been established with a phased approach guided by the priorities identified during this study. The enclosed concept includes a mixture of new and remodeled buildings that will be sequenced in a manner that allows the KDC to remain operational during the construction phases.

#### PHASING INFORMATION

#### PHASE 1

- Construct a new heifer and dry cow barn at the northeast side of the site. Barn is to be positioned in a manner that allows for the construction of future addition(s) under later phases. New barn to house overflow of heifers located elsewhere on site (not in current heifer barn) and relocation of dry cows from current barn. The existing dry cow barn is to be abandoned due to non-compliance with current AALAC regulations. Barn design to follow a freestall and compost bedded pack housing module.
- Construct system of corral fencing at current lactating cow barn to replace hot-wire used for herding animals to milking parlor.
- Expand parlor by constructing corrals outside of building to increase holding pen size and provide safer human access.
- Upgrade data infrastructure to provide more reliable internet on site. Upgrades may include installing fiber optic to site or a mix of improved exterior wireless access points and hardline cabling from tower to site.

#### PHASE 2

- Demo existing feed barn and dry cow barn.
- Construct new lactating cow barn after demolition of buildings indicated above. Barn to be designed following the freestall housing module. Included shall be space for robotic milking stations (for future install or during this phase pending available funding sources). New underground stainless steel piping show be installed running towards milk storage tanks in existing parlor and also plumbed to the north for future relocation of tanks. An elevated observation walkway is desired above the pens to allow for a safe teaching environment.
- Construct new feed storage on east side of site. Location of new feed storage should be positioned to allow for future growth of the lactating cow barn.
- Temporary feed aisle for existing lactating cow barns to be constructed for use during Phase 2 construction.

#### PHASE 3

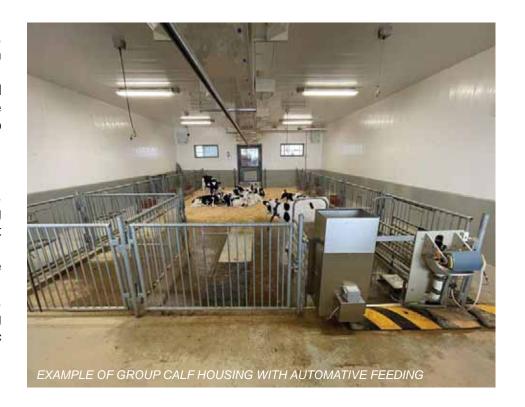

- Remodel / reconstruct existing lactating cow barns.
- South barn location to become new updated veterinary medical lab, pens for up close heifers and cows, storage, and teaching classroom lab.
- North barn location to become new ambulatory care (relocated from milking parlor building) and new calf barn. A small lab is to be constructed as separation between the two functions. Calf barn to provide group feeding with automative feeding.

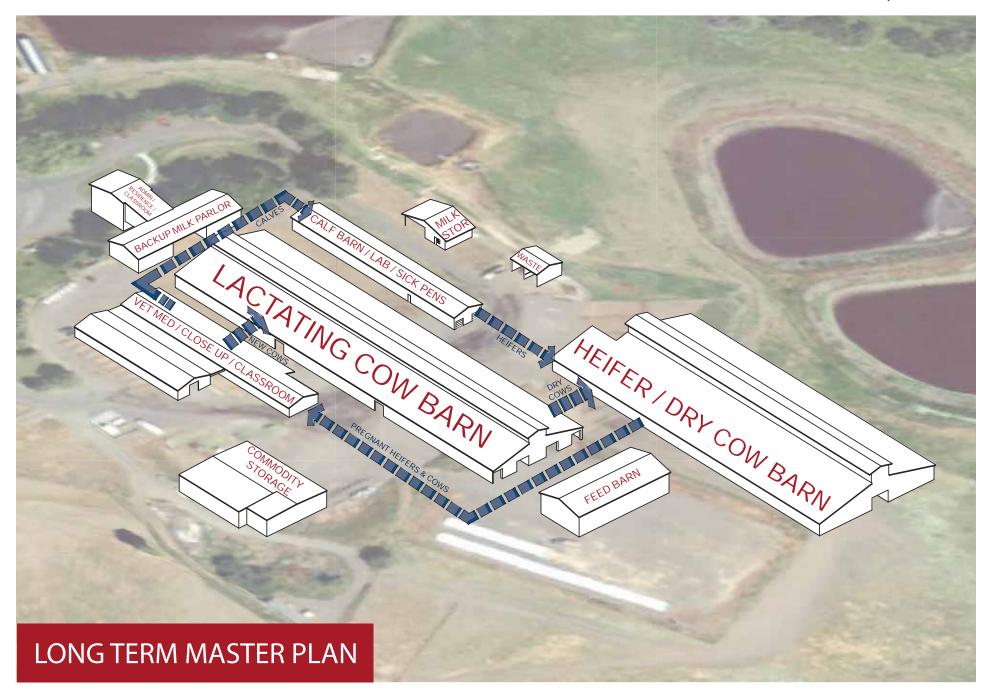

#### PHASE 4

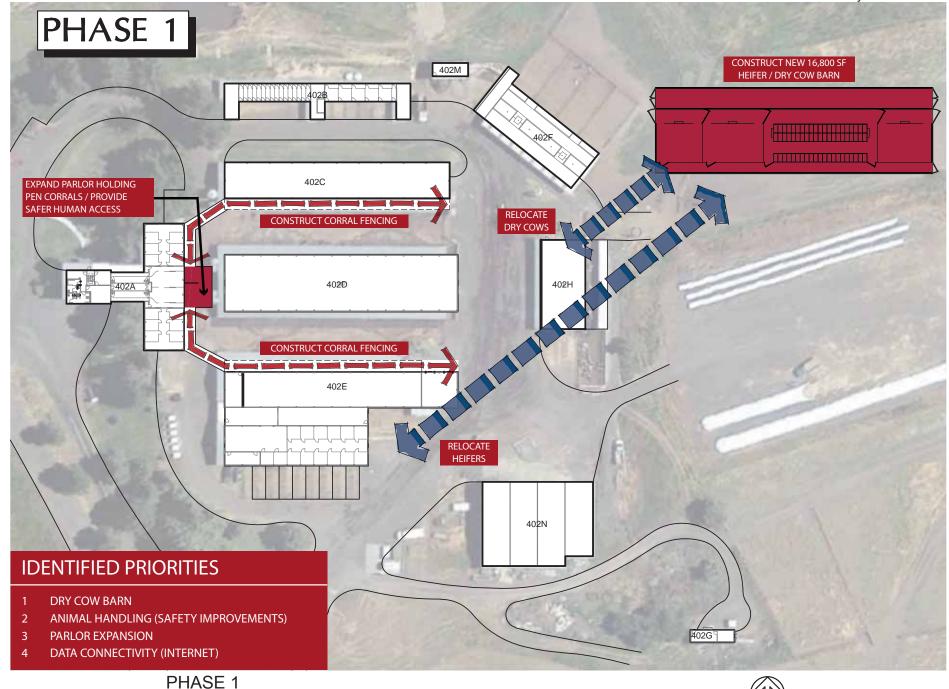

- Demo existing heifer barn and expand new heifer / dry cow barn.
   Expansion to follow a freestall and compost bedded pack housing module. A small lab shall be constructed including set up to conduct artificial insemination (AI).
- Expand lactating cow barn to the east following the same freestyle housing module.
- Remodel existing parlor, residence, and administrative building.
  Milking parlor to remain as teaching tool and emergency milking
  with anticipation that majority of milking to take place by new robotic
  milkers located in lactating cow barn.
- Demo existing calf barn for new milk storage building.

#### ADDITIONAL SITE DEVELOPMENT CONSIDERATIONS

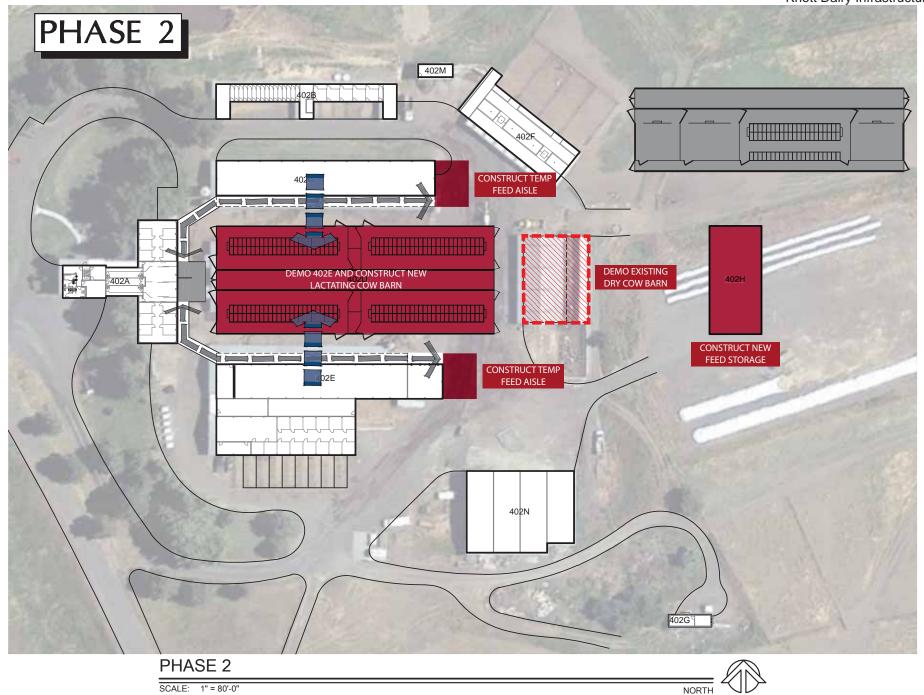

It is expected that the existing site directly related to each phase will be developed for the needs under that phase. In addition, other site improvements which may be independent of the above listed phases include road and parking lot improvements, pasture watering system, and improvements / modifications to the current waste management system. There are many decisions left to be made regarding the direction of the waste management system which may include improvements to waste flume and settlement ponds, addition of on-site composting, or implementation of a dairy digester system.

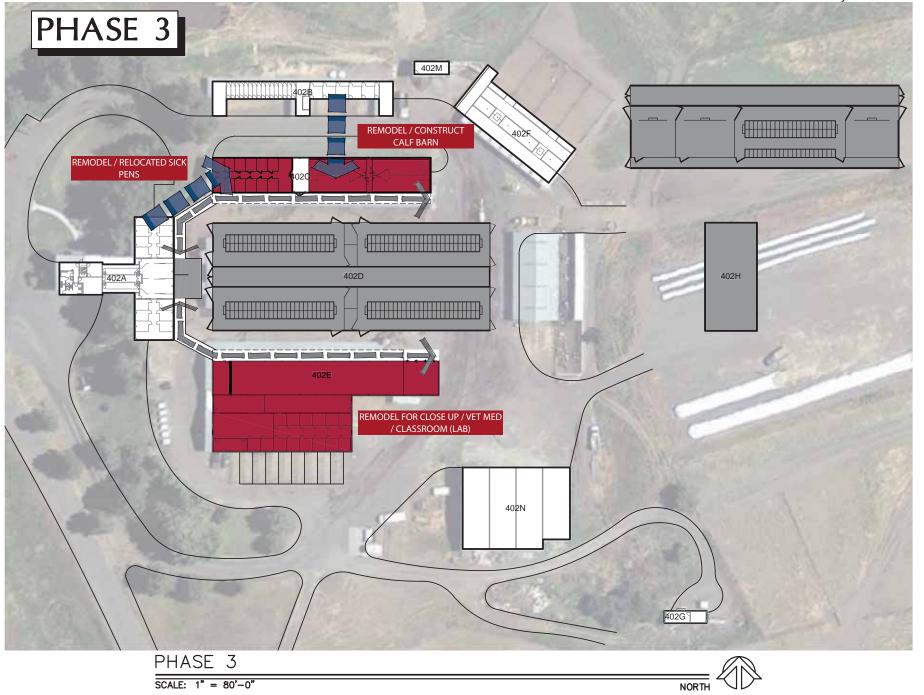

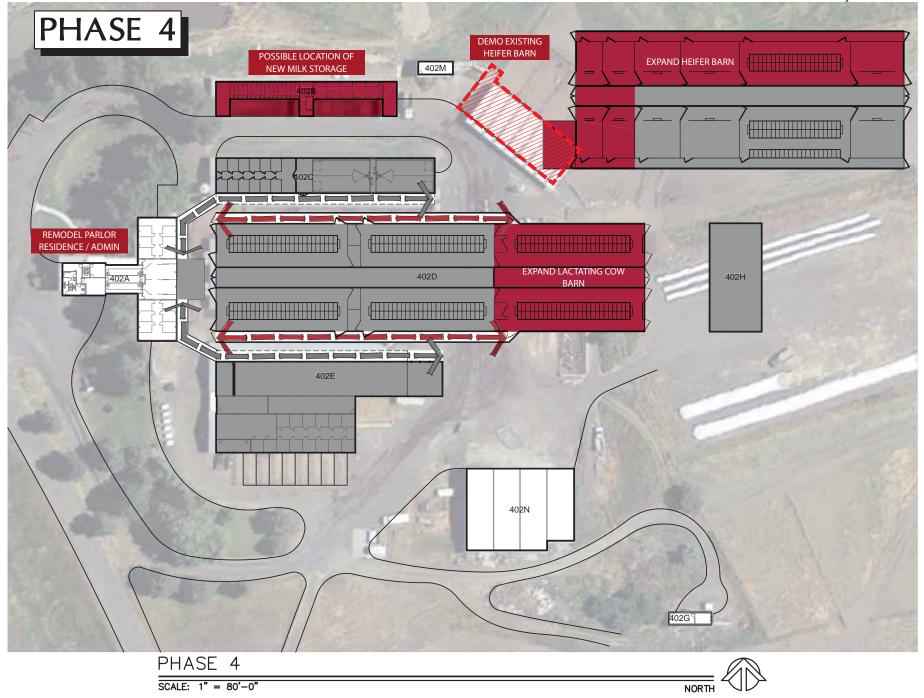

SCALE: 1" = 80'-0"

### POSSIBLE COSTS / BUDGET

The success of any project is founded on quality research and investigation to fully understand applicable issues. This facility study and conceptual design is a step forward in identifying these issues. It is fully expected that adjustments in cost assumptions will need to be coordinated and refined as the design is further developed and actual financing is finalized. The project will be administered by WSU Facility Services and state requirements will need to be followed. Costs will need to be continually updated as more information is obtained, scope is refined, and the design is adjusted.

#### **CONSTRUCTION COSTS ANTICIPATED**

The construction costs included for this facility study are a summary of an itemized cost model that was developed for the conceptual design. Anticipated construction costs have been identified per each phase outlined in this document. Included are building construction costs as well as site improvement costs directly related to the development of that stucture. Seperate from the identified phased work may be additional site improvement costs for road and parking lot improvements, a pasture watering system, and improvements / modifications to the current waste management system. As mentioned previously, the construction cost model will need to be updated at each design phase to monitor whether assumptions made are still valid with changing market conditions.

#### TOTAL PROJECT COSTS ANTICIPATED

Total project costs include allowances for costs that will be required for the entire project in addition to the assumed construction costs. Included are additional expenditures beyond construction costs such as allowances for administrative, support, FFE (fixtures, furnishings, & equipment), moving, A/E fees, inflation, testing & commissioning, abatement, change orders, and project contingencies. These project costs should be closely examined, identified, amended, and budgeted as required. WSU Facility Services will provide project cost budgeting and administration.

OPINION OF PROBABLE COSTS	PHASE 1	PHASE II	PHASE III	PHASE IV
General Conditions	\$1,393,683	\$1,655,449	\$893,374	\$3,308,872
Calf Barn / Sick Pens Heifer Barn / Dry Cows Close Up / Vet Med	\$4,452,000		\$572,358 \$2,632,314	\$5,563,400
Lactating Barn Feed Barn Milking Parlor	\$47,360	\$6,190,291 \$1,351,200		\$3,811,000 \$442,880
Admin / Classroom / Residence Milk Storage Facility Other Infrastructure	(Data) \$500,000			\$1,592,000 \$460,160 (Other) TBD
Design Contingency (15%)	\$958,957	\$1,379,541	\$614,707	\$2,276,747
Probable Consruction Costs Anticipated Project Costs (33% of construction costs)	\$7,352,000 \$2,426,160	\$10,576,482 \$3,490,239	\$4,712,753 \$1,555,208	\$17,455,059 \$5,760,169
Probable Total Budget Cost (range for conceptual design unknowns / 3-5 years inflation)	\$9,778,160 \$9.7M - \$12.2M	\$14,066,721 \$14M-\$17.6M	\$6,267,961 \$6.3M-\$7.8M	\$23,215,228 \$23M-\$29M

## SCHEDULE EXPECTATIONS

The following anticipated project schedule expectations have been processed with the WSU College of Agricultural, Human, and Natural Resource Sciences administration identifying possible milestone expectations for funding of the individual phases. It is anticipated that Phase 1 and Phase 2 will occur within 5 years of this study with Phase 3 & Phase 4 following consecutively afterwards as funding becomes available.

Phase I: 2023-2025 Phase II: 2025-2027 Phase III: TBD Phase IV: TBD

#### PROJECT SCHEDULE MILESTONES ANTICIPATED

A possible project schedule per phase has been approximated below based on a 24 month schedule for design, approval, and construction. Applicable milestones should also include funding finalization, Washington State University Board of Regents approval (planning & design) and WSU Facility Services assignment and set up. A possible schedule of milestones may look like the following:

> Finalized Project Design 4 months **Construction Documents** 5 months Plan Review 1 month Bidding and Contracts 2 months Construction 12 months Total Design/Construction 24 months

The following individuals have provided active participation, input, or feedback as a part of this facility study. With much gratitude their efforts have provided for the development of this comprehensive study for the proposed WSU Knott Dairy Center Master Planning.
