

# CAPITAL BUDGET REQUEST

**2025-2027 BIENNIUM**

**Eastern Washington University**

September 10, 2024

Governor Jay Inslee  
Office of the Governor  
PO Box 40002  
Olympia, WA 98504

Dear Governor Inslee:

This letter transmits the 2025-27 biennial capital budget request for Eastern Washington University (EWU). Developed within the guidelines set by the Office of Financial Management, this request represents Eastern's efforts to focus on its mission to provide an inclusive, equitable, and transformative learning experience, driving the pursuit of knowledge with affordable academic excellence.

These prioritized capital budget requests support university priorities and strategies currently in place to serve the higher education needs of our region. Eastern places a high distinction on protecting the state's investment in our physical facilities. Funding for projects such as classroom renewal and infrastructure preservation are essential to the success of the university.

**Priority #1 – Martin-Williamson Hall**

Eastern Washington University is requesting funding for Phase 1 improvements to Martin-Williamson Hall. The facility houses the Psychology and Education departments along with Counseling and Wellness services and Student Accommodations and Support Services. While the building no longer supports an effective learning environment, it does represent an important place in EWU's history, and a prominent location on the campus. This major renovation will ensure that the building continues to serve students for many years into the future, and it will usher a new era of building performance and sustainability by complying with state and federal mandates for energy use and carbon emissions. Combined with priority #2 below, this project will significantly reduce the building energy use and help to lower the total campus energy use intensity.

**Priority #2 – Geothermal Plant – Node 1**

With the adoption of HB 1390, public facilities are required to develop a plan to reduce energy use, reduce carbon emissions, and to comply with state and federal energy performance standards. After multiple years of study and numerous technical reports, Eastern Washington University requests funding to meet these standards in the most effective way possible - by incorporating ground source heat pump technology to create a Geothermal Plant (Node 1) on the Cheney campus. Completing this facility would enable EWU to meet current standards, future proof our campus energy system, and to use the best current technology to reduce carbon emissions. The facility will be designed to support up to 11 buildings (over 500,000 sf), existing and new, on the campus and to dramatically reduce overall demand of natural gas consumption at the existing steam plant.

**Priority #3 – Dental Therapy Lab and Clinic**

Eastern Washington University requests funding to relocate the EWU Dental Hygiene Clinic to a new facility adjacent to the University of Washington/EWU Regional Initiatives in Dental Education (RIDE) program. EWU is planning to launch a new graduate-level Dental Therapy program which will require expanded use of the existing Dental Hygiene Clinic. Relocating EWU's Dental Hygiene Clinic to available space in a building adjacent to the UW/EWU RIDE program will strengthen natural programmatic and collaborative opportunities

---

and result in shared infrastructure and operational support. With the planned addition of Dental Therapy, this proposal presents a unique opportunity to create the only dental education cluster in the state that brings together baccalaureate, masters, and doctoral-level dental training in shared facilities.

Eastern Washington University is committed to ensuring that our facilities remain well-maintained and responsive to the long-term needs of the region. These proposal support expansion and renewal of campus infrastructure and are essential to providing access to higher education for the residents of Eastern Washington. We respectfully request your thoughtful consideration of this capital funding request, which is critical to supporting the university's mission.

Thank you for your continued support.

Sincerely,

Shari McMahan, PhD  
President

# 370 – Eastern Washington University

Property: Eastern Washington University (EWU) - Martin/Williamson Hall Predesign  
Re:

Dear Kris:

Thank you for contacting the Washington State Department of Archaeology and Historic Preservation (DAHP) regarding the above referenced proposal. This action has been reviewed on behalf of the State Historic Preservation Officer (SHPO) under provisions of Governor's Executive Order 21-02 and the Office of Financial Management's requirement for DAHP predesign review on capital funded projects. Our review is based upon documentation contained in your communication.

It is our opinion that Property ID: 157306, Martin/Williamson Hall is eligible for listing in the National Register of Historic Places for its association with Eastern Washington University history and representing a significant and distinct architectural style. So, the project will likely result in an adverse impact if heavily altered in the implementation of the suggested predesign scope. We recommend keeping DAHP involved in the predesign phase as much as possible to minimize this impact as much as possible.

Also, we appreciate receiving any correspondence or comments from concerned tribes or other parties that you receive as you consult for this project. Thank you for the opportunity to review and comment. If you have any questions, please feel free to contact me.

Sincerely,

Maddie Levesque, M.A  
Architectural Historian

Re: More Information Needed, Survey Requested

Dear Troy:

Thank you for contacting the Department of Archaeology and Historic Preservation (DAHP) regarding the above referenced proposal. This action has been reviewed on behalf of the State Historic Preservation Office (SHPO) under provisions of Governor's Executive Order 21-02. Our review is based upon documentation provided in your submittal. We understand this request is only regarding the predesign of the project, and appreciate you consulting with DAHP early on in project development.

In order to complete our review, we request an intensive level survey of Cadet Hall. Cadet Hall is proposed to be demolished as part of the project scope and has not been surveyed for eligibility to the National Register of Historic Places. Cadet Hall was built in 1956 and may be significant for its association with the successful ROTC program at EWU.

Before we can assess project impact on historic resources, we need to know what historic resources are present in the project area. An [intensive-level survey](#) and updated Historic Property Inventory Form completed by a [Secretary of the Interior Qualified Architectural Historian](#) will assist us in making this determination.

These comments are based on the information available at the time of this review and on behalf of the State Historic Preservation Officer in conformance with Executive Order 21-02. Thank you for the opportunity to review and comment. If you have any questions, please feel free to contact me.

Sincerely,

Maddie Levesque, M.A  
Architectural Historian  
(360) 819-7203  
Maddie.Levesque@dahp.wa.gov

Re: No Historic Resources Impacted

Dear Troy:

Thank you for contacting the Washington State Department of Archaeology and Historic Preservation (DAHP) regarding the above referenced proposal. This action has been reviewed on behalf of the State Historic Preservation Officer (SHPO) under provisions of Governor's Executive Order 21-02. Our review is based upon documentation provided in your submittal. Please note this review is for the predesign phase of the project only.

It is our opinion that no historic resources will be impacted by the current project as proposed.

As a result of our opinion, further contact with DAHP on this proposal is not necessary. However, if new information about affected resources becomes available and/or the project scope of work changes significantly, please resume consultation as our assessment may be revised. Also, if any archaeological resources are uncovered during construction, please halt work immediately in the area of discovery and contact the appropriate Native American Tribes and DAHP for further consultation.

Thank you for the opportunity to review and comment. If you have any questions, please feel free to contact me.

Sincerely,

Maddie Levesque, M.A  
Architectural Historian

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:09PM

Project Number: 40000113

Project Title: Martin - Williamson Hall

## Description

Starting Fiscal Year: 2024

Project Class: Preservation

Agency Priority: 1

### Project Summary

Martin/Williamson Hall houses the Psychology department, the Education department, Counseling and Wellness Services, and Student and Support Services. The building has an aggregate age of over fifty-years-old with major systems that are well past their expected lifecycle. The renovation of this building is the first priority for facilities preservation on the Eastern Cheney campus.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

**Problem Statement:** The sustainability of growth for Eastern Washington University's professional program's degree production is limited by the lack of quality and quantity of appropriate space for the programs in Martin/Williamson.

The Martin/Williamson facility houses two of five programs within the College of Professional Programs; the School of Education and the School Psychology. Also located within Martin Hall and closely tied to the departments and academic success is the Counseling and Wellness Services and Student Accommodations and Support Services.

Martin/Williamson condition and configuration continue to be an obstacle for all departments housed within the facility, inhibiting effective quality program instruction, administration, and student services. Many changing factors, internal and external to the university, have created the need for the Martin/Williamson facility to respond for EWU's future student population. The renovation of Martin/Williamson is currently the highest priority for Eastern.

**Martin/Williamson (the building complex):** The Martin/Williamson facility is one of Eastern's largest academic buildings, with over 89,000 gross square feet. With an important location on the main quad, Martin/Williamson also provides a strong backdrop for the pedestrian "mall" that connects the heart of campus. The 2014 Comprehensive Campus Master Plan (CCMP) notes Martin/Williamson's prominent location and approach to increase the density of the existing campus to maximize the use of the current land holdings.

The renovation of Martin Hall in 1980 (originally constructed in 1935) created a number of highly specialized laboratory and clinical research spaces. These spaces were tailored to a teaching pedagogy that has since changed and therefore are now a hindrance to modern teaching practices. Williamson Hall, built in 1966, has never been fully renovated and needs significant upgrades to the systems to make the building meet today's performance standards. Overall, the combined buildings have undergone many additions and renovations over the years and lack programmatic cohesion.

**Condition assessment:** From Eastern's 2022 Facility Condition Assessment (follow-up to the 2005 Meng Analysis), Martin and Williams's overall facility condition score is 3.0 (Fair). Preventive maintenance and minor improvements have kept the facility in a stable state for academic use.

**Operating Budget:** The replacement of the many different outdated and aged building systems into a single integrated facility will reduce overall operating and maintenance costs to the campus. The existing Williamson Hall is a highly inefficient single glazed building and is a major energy user for the complex. Integrated daylighting and electric lighting controls will greatly improve the efficiency of the facility. Any increase in square footage to support the programs will be offset by new efficient systems and an improved building envelope.

**Public Safety:** Campus security is a continuously evolving aspect for existing and future campus development. The existing

## Description

building has many dead end interior corridors and back halls presenting a significant security problem. Exterior back courtyards are hidden and lack overview from major circulation/public spaces. The predesign has developed guidelines and standards for the design phase to implement; both passive and active. The project will improve Martin/Williamson safety, but also adjacent facilities which inevitably effect campus-wide safety and security.

**The School of Education:** The mission of the School of Education is to prepare student-centered educators to be professionals, leaders, scholars, and practitioners. Teachers play extraordinary roles in the lives of their students. Teachers interact and connect with children in all stages of development and from all different backgrounds and ways of life. Over the course of their careers, teachers have the opportunity to affect the lives and futures of countless children, beginning with their student teaching experience. The students our candidates reach will go on to do amazing things; knowing the influence on their success is a deeply rewarding experience.

According to RCW 28B.10.033.1.b.i, field placement of student teachers should be targeted to high-need subject areas, including special education and English language learner, and high-need geographic areas, including Title I and rural schools. This includes devoted space for a Rural Education Lab as a center for rural education as well as the technology to reach remote districts. Eastern is in the planning stages to become a rural education hub and develop a Center for Rural Education Effectiveness. The renovated facility will help Eastern reach that goal for this Center. In order to attract teaching candidates in these high-need areas, the school must fulfill PESB's (Professional Educator Standards Board) Domain 7: where "Providers ensure that programs have adequate resources, facilities, and governance structures to enable effective administration and fiscal sustainability." Specifically, 7.c addresses three components of adequate facilities that are needed as the School of Education continues to grow and serve those in our community, region, state, and beyond. These include having necessary classrooms, lab and office spaces, up-to-date technology as well as the facilities needed to support faculty and candidate use of said technology, and current curricular resources. The space can also be used by the community for things such as the Lands Council as well as hosting a variety of conferences for which the space does not exist. Over the past several years the program has enjoyed substantial growth. Approximately 635 declared undergraduate majors and 1205 graduate students. Without the necessary classroom space and equipment for labs, etc., it is difficult to adequately prepare Washington state educators.

**School of Psychology:** The Psychology programs are important and necessary for the region, serving to address shortages in mental health and school service provision, and provide important applied research. For example, even before the pandemic there was a shortage in mental health service providers in the state of Washington. Eastern's MS Counseling, MS Psychometry, and Behavioral Health Support Specialist programs directly address these needs. Furthermore, the three undergraduate majors provide a pipeline into graduate education in these areas. Related, the EdS School Psychology program addresses the nationwide shortage of School Psychologists, especially in rural areas. Additionally, our faculty support EWU service missions. For example, one faculty member hosts a drop-in center for students identified with autism spectrum disorder. Another faculty member is providing sports psychology services to the athletic programs.

Over the next several years there are several curricular initiatives that the School of Psychology is considering, including a post-master's certificate in school counseling that is already approved through the catalog and a Doctor of Psychology (PsyD). In addition to academic offerings, there are plans regarding: 1) a teaching clinic; 2) an assessment program to support the evaluation needs of students with suspected specific learning disability, neurocognitive disorder, and ADHD requiring identification and documentation of disorder for academic accommodations; and 3) a Center for Safety.

**Counseling and Psychological Services:** The issues facing students pursuing higher education are numerous. Student Affairs and student services functions at Eastern Washington University strive to create a community of care to address the overall wellbeing and needs of students through direct services and prevention activities. Services offered include individual and small group counseling, biofeedback, wellbeing coaching, peer health education, a campus food pantry network, basic needs support, faculty/staff outreach and training, accommodation support, alternative testing for accommodations, former

Project Number: 40000113

Project Title: Martin - Williamson Hall

## Description

foster youth support, partnerships with area agencies to meet student crisis needs, Title IX support and education, and general case management for students in crisis.

Washington State has invested in significant student success initiatives at Eastern Washington University to help ensure that students achieve degree completion. Over the last several years, and with the support of the legislature, Eastern has implemented a total intake model for academic advising and developed a coordinated care network that is designed to:

1. maximize collaboration of various student support services
2. create wraparound care that helps students navigate and overcome social, financial, and/or health obstacles that delay or prevent the successful completion of their degree
3. provide holistic care that helps meet the challenge of increasing mental health concerns on college campuses.

In the coming year, Eastern will launch several positions and initiatives supported by the state to help shift from engaging with students in distress after their social, financial or health challenges have impacted their academic progress to a preemptive and proactive model of support that identifies risks and provides support before student's grades and academic progress are impacted. Our staff to meet student needs and increase holistic support is, roughly, increasing in the next year by 30% in Student Affairs. One of the on-going challenges to meeting student needs effectively and efficiently is tied to space on-campus that supports the addition of positions, training/intervention work, and allows student services to be housed to reduce barriers for student access, increase visibility, and foster sustainable collaboration. The goal is to continue to work towards effectively meeting the needs of all students and, to do this, it is known that space and location of resources matter. Through co-locating student services functions (ex. counseling and wellness, student accommodations, student support services etc.), Eastern believes that we will be able to increase our ability to innovatively meet the needs of students and ensure responsiveness to the changing needs/demographics of our student population.

***What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.***

The primary goal of the renovation is to better integrate the school of Education, the School of Psychology, Counseling, and SASS into a collaborative teaching and learning facility that takes advantage of the interdependent and synergistic nature of the programs. This will allow for structured growth and the synthesis of pedagogy between the two schools and programs. Another goal is to address the state and federal building performance standards such as HB 1390, and Martin/Williamson is the ideal project to maximize the impact in two distinctive ways, 1) to greatly reduce the building energy consumption through envelope improvements and performance, and 2) by connecting to the proposed Geothermal Plant – Node 1. Martin/Williamson is a pivotal component in the campus decarbonization plan as well as the Geothermal Plant – Node 1. These two projects represent the largest possible impact to campus energy use and carbon emissions in the most expedient way.

The intent is to progress this project into the design phase for the 2025-27 biennium and eventually renovate the facility (construction) in the 2027-29 and 2029-31 biennia.

***How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?*** This request would provide programmatic cohesion for all housed within the Martin/Williamson facility and would address reductions in energy use and greenhouse gas emissions on a campus level. Lack of action at this point will result in the continued stagnation of program development and growth, lessen the ability to decarbonize the campus, and ultimately result in higher future costs to achieve the same result.

**School of Education & Psychology:** One of the limitations for the growth described in this request and the focus on the high-need areas is the shortage of space. The schools cannot expand on the EWU plan to transform the region (Strategic Plan) based on the current state of Martin/Williamson. It also hinders the ability to expand opportunities for underrepresented

## Description

populations. The classrooms are outdated in layout, consistent accessibility access, furnishings, equipment, lighting, and climate control. The environment is not conducive to learning or teaching. Additionally, the lack of any type of lab classrooms limits the scope of programs offered. When preparing future educators, it is essential to model the environment and equipment teachers and others would have in their schools so they can generalize the skills into their careers.

***What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.***

Multiple alternatives were explored and are fully documented in the predesign, including cost information. These cover a range of options such as; 1) taking no action, 2) a less extensive renovation that would result in continued teaching challenges due to outdated floor plates and structural grids, and 3) a major renovation that demolishes significant portions of the building in order to create the most efficient and flexible teaching environment while also realizing the most energy efficient and sustainable building shell. The third and preferred option also maintains the historic building facades that play a prominent role in the campus identity and connections to the history of the University.

***Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.***

**School of Education:** The School of Education houses a multitude of degree offerings, certification, and program options. Eight Undergraduate BAE degrees: Blended: Early Childhood and Special Education, Dual Endorsement: Special Education and Elementary Education, Early Childhood Education/PK-3, Educational Studies, Elementary Education, Literacy, Reading & Writing/Elementary, Secondary Education, and Transition to Teaching. Additionally there are cross-campus partnerships in 16 Secondary major certifications: Art (P-12), Biology (5-12), Bilingual (P-12), Business and Marketing (5-12), Chemistry (5-12), Earth and Space Science (5-12), English(5-12), Health and Fitness (P-12), Literacy, Reading, and Writing (P-12), Mathematics (5-12), Middle Level Math ((4-9), Middle Natural Science (4-9), Music-BME (P-12), Physics (5-12), Social Studies (5-12), and Spanish (P-12). The School of Education offers 4 add-on endorsements: Early Childhood Special Education, Elementary Education, Environmental & Sustainability Education, and Special Education. At the graduate level, there are 4 different paths: Education Leadership (EdD), Master in Teaching (MIT): Elementary, Master in Teaching (MIT): Secondary, and Master of Education (MEd). In the MEd program, there are an additional 17 endorsements available through on-campus and/or online courses. There are 9 graduate certificate programs offered: College Teaching, Early Childhood Education, English Language Learners, Health & Physical Education, Library Media, Literacy, Principal, Special Education, and Teaching English to Speakers of Other Languages. Finally, there are eight undergraduate and graduate degrees in Business & Marketing Education (CTE).

In addition to academic offerings, the majority of faculty in the School of Psychology are actively engaged in research and include undergraduate and graduate students in those research endeavors. Current faculty research labs include the following areas of focus: Environmental education, Science Methods and Effective Practices, Social emotional AI learning, Trauma informed practices, Grow your own - educator prep, Literacy - specifically around school shooting and school violence, foundations, Special education - specifically early childhood, transition, behavior, inclusive practices (High leverage practices), Mastery-based learning, Cultural Competence Diversity and Inclusion.

**School of Psychology:** The School of Psychology support the following programs.

Three Graduate Programs. 1) EdS School Psychology: The Education Specialist in School Psychology has two tracks, hybrid and online. Candidates completing the program are prepared to receive a Residency Educational Staff Associate (ESA) Certificate in School Psychology from Washington's Office of Superintendent of Public Instruction (OSPI). Graduates are eligible to become Nationally Certified School Psychologists. This program addresses national shortages and is specifically designed to increase representation of School Psychologists in rural and underserved areas. 2) MS Clinical Mental Health Counseling: Clinical Mental Health Counseling for students preparing as counselors or therapists in settings such as: mental health centers, hospitals, residential treatment centers, employment services and vocational rehabilitation services. Clinical mental health counselors are also frequently found in the juvenile correction facilities, community colleges, pastoral

## Description

services and business and industry. Counseling is one of the most sought-after graduate degrees. 3) MS Psychometry: The Master of Science in Psychometry is designed for individuals to achieve a position as a psychometrist; working in either a school or clinical setting. Under the direction of a licensed psychologist or certified school psychologist, a psychometrist is responsible for the administration and scoring of psychological, social/behavioral/personality, and neuropsychological measures and may aid in collection of background and social/developmental history information and test interpretation. This program is designed to provide the necessary coursework, training, and supervision to administer and score psychometric measures.

One graduate certificate (in collaboration with the School of Education): Social Emotional Learning for Equity Education: A multidisciplinary certificate for Social Emotional Learning (SEL) that helps to meet workforce needs for teachers to deliver SEL in accordance to Washington State's newly adopted SEL standards for K-12 students (k12.wa.us). Courses and workshops provide for in-service needs for teachers through continuing education and/or a graduate certificate.

Three undergraduate Majors. 1) BA Psychology: The Bachelor of Arts program offers a solid background in research methods and statistics, a central set of core theory courses, and opportunities for focused, hands-on experiences in research and in the field. The program is shaped to meet unique interests through a broad set of electives. Key opportunities include active research lab groups for students and field. 2) BS Applied Developmental Psychology: The Bachelor of Science program prepares students for entry-level work and graduate study in a variety of developmental and human service careers. The program covers basic areas of human developmental psychology across the life span with a special focus on processes and principles of developmental change. Key opportunities include involvement in field study placements. 3) BS Health Psychology: The Health Psychology Bachelor of Science Program provides curriculum to support students in understanding ways that psychological, behavioral, and sociocultural factors relate to physical health. Students explore how patients interact with healthcare providers and the healthcare system in general. Key opportunities include field study at medical agencies and active preparation for work in the health care system.

Two undergraduate certificates: 1) Social Emotional Learning for Equity Education (in collaboration with the School of Education): A multidisciplinary certificate for Social Emotional Learning (SEL) that helps to meet workforce needs for teachers to deliver SEL in accordance to Washington State's newly adopted SEL standards for K-12 students. 2) Behavioral Health Support Specialist: The Behavioral Health Support Specialist Certificate offers students advanced training for work involving low-intensity psychological interventions with patients/clients who are managing low to moderate levels of psychological disorders such as depression and anxiety in healthcare settings. It is crafted to be an add-on credential for individuals majoring in the BS Health Psychology or the BA Psychology majors, and is open to other disciplines such as social work, nursing, or addiction studies. This is the first certificate of this model in the state and has been a focus of attention in the community.

Three undergraduate minors.: 1) Applied Developmental Psychology: Minors focus on courses in applied psychology, with particular emphasis on developmental considerations. 2) Industrial Organizational Psychology: Industrial and Organizational Psychology is an advancing area in psychology and offers great opportunity for collaboration with other majors (e.g., Business). 3) Psychology: Minors in psychology complete a course in introductory psychology along with 15 credits of coursework from concentration areas in psychology.

In addition to academic offerings, the majority of faculty in the School of Psychology are actively engaged in research and include undergraduate and graduate students in those research endeavors. Current faculty research labs include the following areas of focus: Autism and families, Training of school psychologists, Social emotional learning, MTSS for mental health in schools, Psychometrics, Cognitive psychology, Work-life balance, Distraction, Homeschool socialization, Practice effects, Perceptions of safety, Adjustment to Incarceration, Domestic abuse trauma and recovery, Psychology of stress, Psychosocial adjustment to physical and mental chronic health conditions, Internalized stigma, Facilitating student learning with physical and mental chronic health conditions, Perceived loneliness and social isolation with chronic health conditions,

## 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:09PM

Project Number: 40000113

Project Title: Martin - Williamson Hall

### Description

Successful aging, Life extension, Older adult well-being, DNA and maladaptive personality characteristics, COVID-19 and resilience, International difference in COVID response, Social cognition, Stereotypes, Health resource utilization, First impression biases, Self-perception biases, Compassion processes and impacts, Compassion Focused Therapy, Anger, Memory, Aging, Psychopathy, Correcting misconceptions and errors in knowledge, Sexual assault survivorship, Relational cultural theory, Trauma in counselor education contexts, Simultaneous supervision, Suicide prevention, Sports psychology, Gratitude and happiness, Cognitive assessment, Field supervision, and Developmental psychology.

**Counseling and Wellness Services:** Counseling activity in the 2021-22 academic year:

1. our Counseling and Wellness staff averaged 507 counseling appointments per term (Quarters)
2. our Counseling and Wellness staff served 863 faculty/staff/students through outreach and training programs
3. our Accommodations staff averaged serving 731 students' per term (Quarters)
4. our Student Support Services team engaged in outreach to 92 eligible Passport (former foster-youth) students
5. our Student Support Services team managed 882 student care cases requiring wrap-around support services

**Non-state funds are not currently being considered for this project.**

***Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.***

#### ***Facilities Master Plan - Objectives***

1. Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
2. Be flexible—able to respond to changes in technology, pedagogy, and student demographics
3. Align facilities with academic purpose and need
4. Promote a campus environment that "feels like home" for EWU student
5. Coordinate with funding—"the plan must make sense"

The University has just embarked on an updated Comprehensive Campus Master Plan which will further inform the design as the plan is finalized in 2025. EWU is also in the midst of several other planning efforts and initiatives, including: Decarbonization Plan, Strategic Planning, Strategic Resource Allocation, Gender Inclusive Study, and multiple plans and initiatives to address sustainability on the campus.

#### ***Facilities Planning Principles***

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

1. Carefully evaluate each project regarding renovation vs. replacement opportunities.
2. Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
3. All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
4. Improve the overall character of the campus with the implementation of each project.
5. Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
6. Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

***Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.***

IT related cost development will be detailed and quantified in the design phase. The project will involve costs associated to updated data distribution, classroom and lab instruction technology, life safety and environmental controls.

***If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including***

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:09PM

Project Number: 40000113

Project Title: Martin - Williamson Hall

## Description

*expenditure and FTE detail. See Chapter 12Puget Sound Recovery) in the 2021-23 Operating Budget Instructions.*

This project is not linked to the Puget Sound Action Agenda.

***How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clear Buildings performance standards in RCW19.27A.210, or other statewide goals to reduce carbon pollution and/or improve energy efficiency? Please elaborate.***

All requirements of established RCW's, statewide goals and codes relating to renovation of Washington State Higher Education facilities will be met or exceeded. Sustainability and conservation are of the highest priority for the University. The programming and design of the renovated Martin/Williamson will reflect the highest standards and dedication to these university strategic goals. As outlined in the predesign for Martin Williamson and the Request for the Geothermal Plant–Node 1, this facility will be a key contributor to the larger plan of decarbonizing and reducing the EUI of the campus.

***How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?***

**School of Education:** The new Professional Educator Standards Board(PESB)'s CCDEI (Cultural competency, diversity, equity, and inclusion)standards initiative include three that pertain directly to how this capital request for the School of Education supports a host of needs. An enhanced and updated School of Education would support the programs abilities to “include students, families, and communities as valued members of and contributors to the education community . . . create conditions that support partnerships and shared responsibility for learning [and] remove barriers to ensue each and every student experiences the full benefit of public education.”

**School of Psychology:** The schools undergraduate and graduate programs are specifically crafted to support the needs of learners coming from diverse backgrounds. There are offerings for those considered traditional college students and individuals with other life factors that make the traditional full-time, day-time residential academic programs logistically difficult. This has been accomplished by having condensed meeting visits to campus for students while supplementing content through both synchronous and asynchronous virtual delivery modalities. For this reason, we require adequate and appropriate space to support that face-to-face teaching while also having classrooms and meeting spaces that support the most up-to-date technology and pedagogical practices.

**Counseling and Wellness Services:** Presently, student service offices are spread throughout campus and several of them have low visibility. With examination of student service space needs on campus, in an effort to reduce access barriers and meet student needs, it has become clear that a number of our facilities pose accessibility concerns, lack of confidentiality/privacy in the spaces that they occupy is significant, and the International Association of Counseling has highlighted that our desk space and group space are insufficient for our counseling efforts.

Seek to address the above and help ensure that our facilities/space:

- 1.address student frustration of having to navigate multiple buildings to complete one process
- 2.are student centered
- 3.allow us to effectively and efficiently cross-train capable staff
- 4.identifying and addressing outdated processes and approaches through collaboration of like function
- 5.are accessible for all

***Is there additional information you would like decision makers to know when evaluating this request?***

***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high

**Description**

quality, student-centered education to a diverse population students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and promoting student success by supporting student engagement and timely degree completion.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay and has been included on the attached Direct Pay Form

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

## Availability of Space/Campus Utilization Template

Project name:

CBS/OFM Project #:

Institution:

Category:

Campus/Location:

### Enrollment

|   |  |  |
|---|--|--|
| 2023 fall on-campus student FTE: <input type="text" value="8,680"/> | Expected 2024 fall on-campus student FTE: <input type="text" value="8,246"/> |  |
|   |  | % increase budgeted: <input type="text" value="-5.00%"/> |

Enter the average number of hours per week each for (a) classroom seat and (b) classroom lab is expected to be utilized in Fall 2024 for the campus where the project is located.

| (a) General University Classroom Utilization |            | (b) General University Lab Utilization     |             |
|--|------------|--|-------------|
| Fall 2023 Weekly Contact Hours               | 60,425     | Fall 2023 Weekly Contact Hours             | 11,565      |
| Multiply by % FTE Increase Budgeted          | -5.00%     | Multiply by % FTE Increase Budgeted        | -5.00%      |
| Expected Fall 2024 Contact Hours             | 57,404     | Expected Fall 2024 Contact Hours           | 10,987      |
| Expected Fall 2024 Classroom Seats           | 6,415      | Expected Fall 2024 Class Lab Seats         | 996         |
| <b>Expected Hours per Week Utilization</b>   | <b>8.9</b> | <b>Expected Hours per Week Utilization</b> | <b>11.0</b> |
| HECB utilization standard (hours/GUC seat)   | 22.0       | HECB utilization standard (hour/GUL seat)  | 16.0        |
| Difference in utilization standard           | -59.3%     | Difference in utilization standard         | -31.1%      |

If the campus does not meet the 22 hours per classroom seat and/or the 16 hours per class lab HECB utilization standards, describe any institutional plans for achieving the utilization standard.

Eastern Washinton University finds itself in a similar situation as so many other Universities around the nation in a post-pandemic environment. During this time while the focus needs to remain on increasing enrollment, it is vitally important to invest in current facilities so that they continue to serve students, do not fall into disrepair, and are designed to meet future demands, technologies, and teaching pedagogies. In order to achieve this, EWU has embarked on a number of studies to best determine future actions which may range from strategic investment in facilities and/or contracting in others. Some of that work is summarized below.

**SRA** - In 2022, the University began a Strategic Resource Allocation (SRA) process which entailed a systematic, collaborative, and transparent process to examine the ways resources are being invested. As a regional comprehensive university, it is EWU’s goal to ensure that academic programs are best aligned to meet regional workforce needs, and university services aligned in such a manner as to ensure the student experience is meaningful and campus resources are efficient, effective, and sustainable. The process culminated in 2024 and measures are being put into place to make the University as efficient as possible, including physical improvements, consolidation, and/or reductions where facilities are no longer effectively serving the University.

**Strategic Planning** – Eastern Washington University is in the process of a Strategic Planning effort to guide the direction and growth of Eastern Washington University. By systematically assessing strengths, weaknesses, opportunities, and threats, EWU will articulate a clear vision for the future and establish well-defined goals. This process enables the University to align its resources, expertise, research endeavors, and educational programs effectively.

**CCMP** – EWU has just started the process to develop a Comprehensive Campus Master Plan (CCMP) to replace the previous plan that was completed in 2014. Recognizing the unique character, current physical and financial conditions, program and space needs, and growth during the past 10 years and projected into the future, the CCMP will be a guiding document to inform decisions for the next 10 years regarding development, growth, consolidation, etc. This document will include and be informed by numerous other studies that are recently completed or underway: SRA, Strategic Plan, Decarbonization Plan, Climate Resiliency and Sustainability, CCMP, Geothermal Studies, Housing Plan, Currently Planned Construction and Renovation Projects, and Predesign Studies.

C-100 to expected MACC variance: 109%

NOTE: The above information reflects total project build out and schedule of the proposed Phase 1 and Phase 2 of this predesign report.

**Efficiency of space allocation.** For each major function in the proposed facility (classroom, instructional labs, offices), identify whether space allocations will be consistent with the Facility Evaluation and Planning Guide (FEPG) assignable square feet standards. If any proposed allocations exceed FEPG standards, explain the alternative standard that has been used and why.

**Example: efficiency of space allocation – FEPG standard**

| FEPG room classification number | FEPG room classification type | Project ASF per station | FEPG standard  | Meets standard (Y/N) | Comments   |
|---------------------------------|-------------------------------|-------------------------|----------------|----------------------|--|
| 110                             | Classroom                     | 34                      | 16-26          | N                    | Exceeds standards due to programmatic need for demonstration space & flexibility   |
| 110                             | Classroom                     | 44                      | 16-26          | N                    | Exceeds standards due to programmatic need for flexibility of room configuration   |
| 110                             | Classroom                     | 30                      | 16-26          | N                    | Exceeds standards due to programmatic need for flexibility of room configuration   |
| 210                             | Class Lab – Natural Sciences  | 50                      | 25-70          | Y                    |  |
| 210                             | Class Lab – Library Science   | 48                      | 30-40          | N                    | Exceeds standards due to programmatic need for demonstration space   |
| 215                             | Class Lab – Services          | -                       |                | N/A                  | Sized appropriately to serve two labs.   |

| 680                             | Meeting Room                  | 39                      |                | N/A                  | Sized to appropriately to serve programmatic need and flexibility.   |
| 800                             | Health Care Facilities        |                         |                | N/A                  | Sized appropriately for program needs  |

Identify the (a) assignable square feet in the proposed facility; (b) the gross square feet; and (c) the net building efficiency (“a” divided by “b”).

|   |
|---|
| 72,805 ASF / 124,375 GSF = 58.5% Net Efficiency |
|---|

**Instructions:**

Provide the facility's condition score (1 superior – 5 marginal functionality) from the 2016 Comparable Framework study, and summarize the major structural and systems conditions that resulted in that score. Provide selected supporting documentation in appendix, and reference them in the body of the proposal.

**Narrative Response:**

The existing facility condition score is 3.0. The current deficiencies include: Poor energy performance and building envelope, failing mechanical systems that are at the end of their useful life, inadequate lighting to meet educational standards, IT and AV infrastructure no longer supports current teaching or learning styles, the existing concrete structure no longer meets basic seismic requirements and requires significant upgrades, the structural layout/grid is not conducive to current classroom sizes or teaching environments, toilet facilities do not meet current accessibility standards, stair handrails do not meet code requirements, and most of the building finishes are in need of replacement.

**Instructions:**

Identify the estimated number of additional FTE students the project is expected to enable the institution to serve when the space is fully occupied. Describe the method by which additional FTEs are calculated, including an analysis of probable student enrollment demand from project completion to full occupancy. Also provide an estimate of the number of additional FTE enrollments in high-demand fields and the fields in which such growth is expected to occur.

Per RCW 43.88D.010(1)(a), growth projects must also demonstrate that they can more cost- effectively provide enrollment access than alternatives such as university centers and distance learning.

**Narrative Response:**

EWU's psychology and education departments have historically been two of the most robust programs on campus. As noted in the chart below, the demand for psychology majors in Spokane County is the highest of the majors listed, and both psychology and teaching are in the top 15 majors for demand. The newly renovated facility will accommodate more FTE students, primarily due to efficiency and the effective layout of space. In addition to FTE students in academic fields, the facility will also accommodate Counseling and Wellness as well as the Student Accommodations and Support Services (who are not currently located in the building). The demand for mental health services and access to mental health providers has increased exponentially post-covid. Creating new, efficient, and welcoming spaces to meet students where their needs are is more important than ever and one of the goals of this facility. While it is difficult to project the number of students who will be served in the building, it is certain that the programs will grow as the local demand continues to increase.

Blue Bar – Correlates to a top 15 in-demand major, or Healthcare field, in Spokane County

Green Bar – 50% mark

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:20PM

Project Number: 40000159

Project Title: Computer Engineering Building - Decarbonization

## Description

Project Phase Title: Design &amp; Construction

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 6

### Project Summary

The Computer Engineering Building is a preservation project that is one component of EWU's overall strategy to decarbonize the campus and comply with House Bill 1390. HB 1390 dictates that the campus must achieve a combined EUI of 112 kBtu/sf/yr. This individual project would replace an inefficient mechanical system, connect to a future Geothermal Plant, and repair or replace building controls and lighting components to improve energy efficiency.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campus wide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – This is a high priority project that is integrally linked and dependent on the Geothermal Node Plant that is being submitted as a separate capital budget request. Supported and justified by multiple studies noted below, this project along with the Geothermal Plant was found to be the most effective approach in addressing decarbonization and energy use for the University while also extending the life of existing, aging facilities. Other supporting studies, attached to this request or submitted separately in EWU's 25/27 budget request, include: Ground Source Heat Pump Feasibility Study, EWU Hydrogeologic Evaluation, Martin-Williamson Predesign, Civil Engineering Building – Applied Engineering Predesign, Lucy Covington Center Predesign, Geothermal Plant – Node 1 report, EWU Decarbonization Plan, and Energy Audits for existing buildings proposed to be connected to the Geothermal Plant (study underway).

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This individual project will help to reduce operating costs by lowering energy consumption and by replacing aging equipment with newer systems. See attached studies for more in-depth analysis and how this project is related to other proposed projects on campus.

Public safety improvements – It will serve to improve the safety and longevity of the existing building, and more importantly help to reduce the long-term impacts of climate change. This region is experiencing records setting temperatures and more intense wildfires year after year, including an evacuation notice due to local fires in 2023. If meaningful steps aren't taken to curb the impacts of climate change, conditions will continue to worsen for future generations.

Clarifying details – In summary, this project is part of a larger initiative to reduce energy use and carbon emissions on the campus by transitioning from burning fossil fuels (natural gas) to ground source heat pump technology (electric). As the new

Report Number: CBS002

Date Run: 9/10/2024 12:20PM

Project Number: 40000159

Project Title: Computer Engineering Building - Decarbonization

## Description

Geothermal Plant – Node 1 comes on-line, this existing building would then be connected to that system along with other energy efficient measures.

Current condition of the facility/ system – The current building was constructed in 2005 and has been well maintained.

Simply due to age, the mechanical systems are nearing the end of their useful life and will require ever increasing maintenance and eventual replacement.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will entail design and construction to replace aging and obsolete mechanical equipment within the existing Computer Engineering Building that was constructed in 2005, changing the primary heating source from steam (natural gas fired boilers) to ground source heat pumps (electric), and will tie to the proposed Geothermal Plant –Node 1.

Design is anticipated to begin in Sept. 2025, construction would begin in Nov. 2026, and substantial completion would be anticipated for the Summer of 2027.

While design and construction of this individual building cannot be phased, this project is one component of a larger campus decarbonization plan related to the completion of the Geothermal Plant – Node 1. Once Geothermal Plant –Node 1 is operational, individual buildings could be added in a staggered approach.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued use of a less efficient heating & cooling system that is nearing its useful end of life, higher operating and maintenance costs of an aging system, not complying with state legislation that requires public institutions to reduce energy use and carbon emissions, potential fines for not complying with the state and federal energy performance standards (anticipated by 2027), requiring increased future costs due to construction escalation, and contributing to continuing and increasing impacts of climate change – both locally and globally.

If approved, this request would directly contribute to the requirement of meeting increasing energy efficiency performance standards and reducing greenhouse gas emissions to levels established by the State of WA, Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-term planning and sustainability goals.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

In the attached and related reports, systems other than geothermal ground source heat pumps were explored. Alternate systems evaluated include 1) existing system - gas fired boilers to produce steam, 2) using renewable natural gas to fuel existing boilers, and 3) VRF – Variable Refrigerant Flow systems that use air to air heat pump technology. More detail can be found in the reports, but to summarize the findings for each system:

- 1) Existing gas fired boilers –This system would result in no changes, no added upfront costs, and it would not address any of the problems or meet state energy use requirements.
- 2) Using renewable natural gas instead of more commonly available utility provided natural gas – While possible in theory, this resource is not feasible or affordable in the quantity required to heat the campus. If the renewable gas were available, current pricing would be approximately (10) times the current utility rate costs.
- 3) Switching individual buildings to VRF systems – This system could be used to heat and cool buildings, however it increases maintenance and operations costs substantially, components would be completely decentralized and less energy efficient, it would require area increases in each of the buildings to house additional equipment, air to air heat pumps can be problematic during the colder months in the eastern Washington climate, and mechanical equipment has a much shorter lifespan.

The recommendation of geothermal ground source heat pumps was chosen because it was the most effective system to address the problems on a long-term basis, it would allow the most reuse of existing campus infrastructure, it is the most energy efficient and would result in the largest decrease of carbon emissions, it would require the least amount of ongoing maintenance, and it would provide the most opportunity to incorporate into academic programs (Mechanical Engineering,

Date Run: 9/10/2024 12:20PM

Project Number: 40000159

Project Title: Computer Engineering Building - Decarbonization

## Description

Electrical Engineering, Sustainability, etc.) to leverage student learning opportunities and increase public awareness and acceptance of sustainability.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

The largest impact would be on the University maintenance staff. Replacing aging equipment would lessen initial maintenance costs at each of the individual buildings, however these savings would be traded for related effort to operate the Geothermal Plant – Node 1. Overall, there would be a need to add some maintenance and operation staff for the new central plant (outside of this individual project).

Students and faculty would be served by this project through the incorporation of the facility and technology into academic programs.

The community would be served on an individual level by the awareness raised from the project and on a larger scale by the reduction in energy use and climate related impacts.

### Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.

There may be opportunities to apply available federal energy incentives to this project, however that will not be fully known until the system has been designed and communicated to those potential sources of funding.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

This project will support the University's strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and predesigns that have been mentioned above or are attached for reference. Ultimately, this will reduce the University's energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

### Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.

This project does not include IT specific costs, however there are tangential costs associated with energy management systems and building controls that will be coordinated with the IT department and are incorporated into the current estimate. See attached EWU decarbonization report for more detail. Final, updated costs will be refined further in design.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.

NA

### How does this project contribute to meeting the greenhouse gas emissions limits established in RCW70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?

As mentioned, this project is a result of and directly contributes to the statewide goals mentioned above with the sole purpose of reducing greenhouse gas emissions, energy use, and to improve building energy performance. See attached studies and reports for specific details and anticipated results. Final results will be determined when the project is fully designed and incrementally introduced to the campus system.

### How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?

Being a state-owned facility, this project would help my modernizing the building inventory and by reducing costs related to

Date Run: 9/10/2024 12:20PM

Project Number: 40000159

Project Title: Computer Engineering Building - Decarbonization

## Description

energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an example of responsible use of state funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally.

The project directly serves the EWU campus and students and will be leveraged to support current academic programs and learning opportunities.

Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of jobs and the growth of technologies related to sustainability and energy efficiency.

**Is there additional information you would like decision makers to know when evaluating this request?**

This project is the result and one component of a comprehensive effort to research, plan, and implement options for the most effective, economically viable, and technologically feasible way to achieve the energy performance goals of the state while meeting the mission and values of Eastern Washington University. It is directly linked to the Geothermal Plant – Node 1, which would need to be constructed prior to the recommended improvements requested within this project.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay and has been included on the attached Direct Pay Form

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:21PM

Project Number: 40000161

Project Title: Art Complex - Decarbonization

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 7

### Project Summary

The Art Complex is a preservation project that is one component of EWU's overall strategy to decarbonize the campus and comply with House Bill 1390. HB 1390 dictates that the campus must achieve a combined EUI of 112 kBtu/sf/yr. This individual project would replace an inefficient mechanical system, connect to a future Geothermal Plant, and repair or replace building controls and lighting components to improve energy efficiency.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campuswide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – This is a high priority project that is integrally linked and dependent on the Geothermal Node Plant that is being submitted as a separate capital budget request. Supported and justified by multiple studies noted below, this project along with the Geothermal Plant was found to be the most effective approach in addressing decarbonization and energy use for the University while also extending the life of existing, aging facilities. Other supporting studies, attached to this request or submitted separately in EWU's 25/27 budget request, include: Ground Source Heat Pump Feasibility Study, EWU Hydrogeologic Evaluation, Martin-Williamson Predesign, Civil Engineering Building – Applied Engineering Predesign, Lucy Covington Center Predesign, Geothermal Plant – Node 1 report, EWU Decarbonization Plan, and Energy Audits for existing buildings proposed to be connected to the Geothermal Plant (study underway).

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This individual project will help to reduce operating costs by lowering energy consumption and by replacing aging equipment with newer systems. See attached studies for more in-depth analysis and how this project is related to other proposed projects on campus.

Public safety improvements – It will serve to improve the safety and longevity of the existing building, and more importantly help to reduce the long-term impacts of climate change. This region is experiencing records setting temperatures and more intense wildfires year after year, including an evacuation notice due to local fires in 2023. If meaningful steps aren't taken to curb the impacts of climate change, conditions will continue to worsen for future generations.

Clarifying details – In summary, this project is part of a larger initiative to reduce energy use and carbon emissions on the campus by transitioning from burning fossil fuels (natural gas) to ground source heat pump technology (electric). As the new Geothermal Plant – Node 1 comes on-line, this existing building would then be connected to that system along with other

# 370 - Eastern Washington University Capital Project Request

Project Number: 40000161

Project Title: Art Complex - Decarbonization

## Description

energy efficient measures.

Current condition of the facility/ system – The current building was constructed in the 1960s and has been well maintained. Simply due to age, the mechanical systems are nearing the end of their useful life and will require ever increasing maintenance and eventual replacement.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will entail design and construction to replace aging and obsolete mechanical equipment within the existing Art Complex, changing the primary heating source from steam (natural gas fired boilers) to ground source heat pumps (electric), and will tie to the proposed Geothermal Plant – Node 1.

Design is anticipated to begin in Sept. 2025, construction would begin in Nov. 2026, and substantial completion would be anticipated for the Summer of 2027.

While design and construction of this individual building cannot be phased, this project is one component of a larger campus decarbonization plan related to the completion of the Geothermal Plant – Node 1. Once Geothermal Plant –Node 1 is operational, individual buildings could be added in a staggered approach.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued use of a less efficient heating & cooling system that is nearing its useful end of life, higher operating and maintenance costs of an aging system, not complying with state legislation that requires public institutions to reduce energy use and carbon emissions, potential fines for not complying with the state and federal energy performance standards (anticipated by 2027), requiring increased future costs due to construction escalation, and contributing to continuing and increasing impacts of climate change – both locally and globally.

If approved, this request would directly contribute to the requirement of meeting increasing energy efficiency performance standards and reducing greenhouse gas emissions to levels established by the State of WA, Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-term planning and sustainability goals.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

In the attached and related reports, systems other than geothermal ground source heat pumps were explored. Alternate systems evaluated include 1) existing system - gas fired boilers to produce steam, 2) using renewable natural gas to fuel existing boilers, and 3) VRF – Variable Refrigerant Flow systems that use air to air heat pump technology. More detail can be found in the reports, but to summarize the findings for each system:

- 1) Existing gas fired boilers –This system would result in no changes, no added upfront costs, and it would not address any of the problems or meet state energy use requirements.
- 2) Using renewable natural gas instead of more commonly available utility provided natural gas – While possible in theory, this resource is not feasible or affordable in the quantity required to heat the campus. If the renewable gas were available, current pricing would be approximately (10) times the current utility rate costs.
- 3) Switching individual buildings to VRF systems – This system could be used to heat and cool buildings, however it increases maintenance and operations costs substantially, components would be completely decentralized and less energy efficient, it would require area increases in each of the buildings to house additional equipment, air to air heat pumps can be problematic during the colder months in the eastern Washington climate, and mechanical equipment has a much shorter lifespan.

The recommendation of geothermal ground source heat pumps was chosen because it was the most effective system to address the problems on a long-term basis, it would allow the most reuse of existing campus infrastructure, it is the most energy efficient and would result in the largest decrease of carbon emissions, it would require the least amount of ongoing maintenance, and it would provide the most opportunity to incorporate into academic programs (Mechanical Engineering, Electrical Engineering, Sustainability, etc.) to leverage student learning opportunities and increase public awareness and

370 - Eastern Washington University  
Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:21PM

Project Number: 40000161

Project Title: Art Complex - Decarbonization

**Description**

acceptance of sustainability.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

The largest impact would be on the University maintenance staff. Replacing aging equipment would lessen initial maintenance costs at each of the individual buildings, however these savings would be traded for related effort to operate the Geothermal Plant – Node 1. Overall, there would be a need to add some maintenance and operation staff for the new central plant (outside of this individual project).

Students and faculty would be served by this project through the incorporation of the facility and technology into academic programs.

The community would be served on an individual level by the awareness raised from the project and on a larger scale by the reduction in energy use and climate related impacts.

**Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

There may be opportunities to apply available federal energy incentives to this project, however that will not be fully known until the system has been designed and communicated to those potential sources of funding.

**Describe how this project supports the agency’s strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

This project will support the University’s strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and predesigns that have been mentioned above or are attached for reference. Ultimately, this will reduce the University’s energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

**Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not include IT specific costs, however there are tangential costs associated with energy management systems and building controls that will be coordinated with the IT department and are incorporated into the current estimate. See attached EWU decarbonization report for more detail. Final, updated costs will be refined further in design.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:23PM

Project Number: 40000163

Project Title: John F Kennedy Library - Decarbonization

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 8

### Project Summary

The John F Kennedy Library is a preservation project that is one component of EWU's overall strategy to decarbonize the campus and comply with House Bill 1390. HB 1390 dictates that the campus must achieve a combined EUI of 112 kBtu/sf/yr. This individual project would replace an inefficient mechanical system, connect to a future Geothermal Plant, and repair or replace building controls and lighting components to improve energy efficiency.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campuswide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – This is a high priority project that is integrally linked and dependent on the Geothermal Node Plant that is being submitted as a separate capital budget request. Supported and justified by multiple studies noted below, this project along with the Geothermal Plant was found to be the most effective approach in addressing decarbonization and energy use for the University while also extending the life of existing, aging facilities. Other supporting studies, attached to this request or submitted separately in EWU's 25/27 budget request, include: Ground Source Heat Pump Feasibility Study, EWU Hydrogeologic Evaluation, Martin-Williamson Predesign, Civil Engineering Building – Applied Engineering Predesign, Lucy Covington Center Predesign, Geothermal Plant – Node 1 report, EWU Decarbonization Plan, and Energy Audits for existing buildings proposed to be connected to the Geothermal Plant (study underway).

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This individual project will help to reduce operating costs by lowering energy consumption and by replacing aging equipment with newer systems. See attached studies for more in-depth analysis and how this project is related to other proposed projects on campus.

Public safety improvements – It will serve to improve the safety and longevity of the existing building, and more importantly help to reduce the long-term impacts of climate change. This region is experiencing records setting temperatures and more intense wildfires year after year, including an evacuation notice due to local fires in 2023. If meaningful steps aren't taken to curb the impacts of climate change, conditions will continue to worsen for future generations.

Clarifying details – In summary, this project is part of a larger initiative to reduce energy use and carbon emissions on the campus by transitioning from burning fossil fuels (natural gas) to ground source heat pump technology (electric). As the new Geothermal Plant – Node 1 comes on-line, this existing building would then be connected to that system along with other

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:23PM

Project Number: 40000163

Project Title: John F Kennedy Library - Decarbonization

## Description

energy efficient measures.

Current condition of the facility/ system – The current building was originally constructed in 1968 and the last remodel was in finished in 1995. Although it has been well maintained, due to age, the mechanical systems are nearing the end of their useful life and will require ever increasing maintenance and eventual replacement.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will entail design and construction to replace aging and obsolete mechanical equipment within the John F Kennedy Library, changing the primary heating source from steam (natural gas fired boilers) to ground source heat pumps (electric), and will tie to the proposed Geothermal Plant – Node 1.

Design is anticipated to begin in Sept. 2025, construction would begin in Nov. 2026, and substantial completion would be anticipated for the Summer of 2027.

While design and construction of this individual building cannot be phased, this project is one component of a larger campus decarbonization plan related to the completion of the Geothermal Plant – Node 1. Once Geothermal Plant –Node 1 is operational, individual buildings could be added in a staggered approach.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued use of a less efficient heating & cooling system that is nearing its useful end of life, higher operating and maintenance costs of an aging system, not complying with state legislation that requires public institutions to reduce energy use and carbon emissions, potential fines for not complying with the state and federal energy performance standards (anticipated by 2027), requiring increased future costs due to construction escalation, and contributing to continuing and increasing impacts of climate change – both locally and globally.

If approved, this request would directly contribute to the requirement of meeting increasing energy efficiency performance standards and reducing greenhouse gas emissions to levels established by the State of WA, Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-term planning and sustainability goals.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

In the attached and related reports, systems other than geothermal ground source heat pumps were explored. Alternate systems evaluated include 1) existing system - gas fired boilers to produce steam, 2) using renewable natural gas to fuel existing boilers, and 3) VRF – Variable Refrigerant Flow systems that use air to air heat pump technology. More detail can be found in the reports, but to summarize the findings for each system:

- 1) Existing gas fired boilers –This system would result in no changes, no added upfront costs, and it would not address any of the problems or meet state energy use requirements.
- 2) Using renewable natural gas instead of more commonly available utility provided natural gas – While possible in theory, this resource is not feasible or affordable in the quantity required to heat the campus. If the renewable gas were available, current pricing would be approximately (10) times the current utility rate costs.
- 3) Switching individual buildings to VRF systems – This system could be used to heat and cool buildings, however it increases maintenance and operations costs substantially, components would be completely decentralized and less energy efficient, it would require area increases in each of the buildings to house additional equipment, air to air heat pumps can be problematic during the colder months in the eastern Washington climate, and mechanical equipment has a much shorter lifespan.

The recommendation of geothermal ground source heat pumps was chosen because it was the most effective system to address the problems on a long-term basis, it would allow the most reuse of existing campus infrastructure, it is the most energy efficient and would result in the largest decrease of carbon emissions, it would require the least amount of ongoing maintenance, and it would provide the most opportunity to incorporate into academic programs (Mechanical Engineering, Electrical Engineering, Sustainability, etc.) to leverage student learning opportunities and increase public awareness and

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:23PM

Project Number: 40000163

Project Title: John F Kennedy Library - Decarbonization

## Description

acceptance of sustainability.

### **Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

The largest impact would be on the University maintenance staff. Replacing aging equipment would lessen initial maintenance costs at each of the individual buildings, however these savings would be traded for related effort to operate the Geothermal Plant – Node 1. Overall, there would be a need to add some maintenance and operation staff for the new central plant (outside of this individual project).

Students and faculty would be served by this project through the incorporation of the facility and technology into academic programs.

The community would be served on an individual level by the awareness raised from the project and on a larger scale by the reduction in energy use and climate related impacts.

### **Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

There may be opportunities to apply available federal energy incentives to this project, however that will not be fully known until the system has been designed and communicated to those potential sources of funding.

### **Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

This project will support the University's strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and predesigns that have been mentioned above or are attached for reference. Ultimately, this will reduce the University's energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

### **Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not include IT specific costs, however there are tangential costs associated with energy management systems and building controls that will be coordinated with the IT department and are incorporated into the current estimate. See attached EWU decarbonization report for more detail. Final, updated costs will be refined further in design.

### **If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

NA

### **How does this project contribute to meeting the greenhouse gas emissions limits established in RCW70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

As mentioned, this project is a result of and directly contributes to the statewide goals mentioned above with the sole purpose of reducing greenhouse gas emissions, energy use, and to improve building energy performance. See attached studies and reports for specific details and anticipated results. Final results will be determined when the project is fully designed and incrementally introduced to the campus system.

### **How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

Being a state-owned facility, this project would help modernizing the building inventory and by reducing costs related to energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:23PM

Project Number: 40000163

Project Title: John F Kennedy Library - Decarbonization

## Description

example of responsible use of state funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally. The project directly serves the EWU campus and students and will be leveraged to support current academic programs and learning opportunities. Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of jobs and the growth of technologies related to sustainability and energy efficiency.

**Is there additional information you would like decision makers to know when evaluating this request?**

This project is the result and one component of a comprehensive effort to research, plan, and implement options for the most effective, economically viable, and technologically feasible way to achieve the energy performance goals of the state while meeting the mission and values of Eastern Washington University. It is directly linked to the Geothermal Plant – Node 1, which would need to be constructed prior to the recommended improvements requested within this project.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay and has been included on the attached Direct Pay Form

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

NA

**Location**

City: Cheney

County: Spokane

Legislative District: 009

**Project Type**

Facility Preservation (Minor Works)

**Growth Management impacts**

There are no growth management impacts, the project is located on the existing Eastern Washington University Campus.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:29PM

Project Number: 40000165

Project Title: Sutton Hall - Decarbonization

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 9

### Project Summary

Sutton Hall is a preservation project that is one component of EWU's overall strategy to decarbonize the campus and comply with House Bill 1390. HB 1390 dictates that the campus must achieve a combined EUI of 112 kBtu/sf/yr. This individual project would replace an inefficient mechanical system, connect to a future Geothermal Plant, and repair or replace building controls and lighting components to improve energy efficiency.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campuswide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – This is a high priority project that is integrally linked and dependent on the Geothermal Node Plant that is being submitted as a separate capital budget request. Supported and justified by multiple studies noted below, this project along with the Geothermal Plant was found to be the most effective approach in addressing decarbonization and energy use for the University while also extending the life of existing, aging facilities. Other supporting studies, attached to this request or submitted separately in EWU's 25/27 budget request, include: Ground Source Heat Pump Feasibility Study, EWU Hydrogeologic Evaluation, Martin-Williamson Predesign, Civil Engineering Building – Applied Engineering Predesign, Lucy Covington Center Predesign, Geothermal Plant – Node 1 report, EWU Decarbonization Plan, and Energy Audits for existing buildings proposed to be connected to the Geothermal Plant (study underway).

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This individual project will help to reduce operating costs by lowering energy consumption and by replacing aging equipment with newer systems. See attached studies for more in-depth analysis and how this project is related to other proposed projects on campus.

Public safety improvements – It will serve to improve the safety and longevity of the existing building, and more importantly help to reduce the long-term impacts of climate change. This region is experiencing records setting temperatures and more intense wildfires year after year, including an evacuation notice due to local fires in 2023. If meaningful steps aren't taken to curb the impacts of climate change, conditions will continue to worsen for future generations.

Clarifying details – In summary, this project is part of a larger initiative to reduce energy use and carbon emissions on the campus by transitioning from burning fossil fuels (natural gas) to ground source heat pump technology (electric). As the new Geothermal Plant – Node 1 comes on-line, this existing building would then be connected to that system along with other

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:29PM

Project Number: 40000165

Project Title: Sutton Hall - Decarbonization

## Description

energy efficient measures.

Current condition of the facility/ system – The current building was originally constructed in 1923 and the last remodel was finished in 1996. Although it has been well maintained, due to age, the mechanical systems are nearing the end of their useful life and will require ever increasing maintenance and eventual replacement.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will entail design and construction to replace aging and obsolete mechanical equipment within Sutton Hall, changing the primary heating source from steam (natural gas fired boilers) to ground source heat pumps (electric), and will tie to the proposed Geothermal Plant – Node 1.

Design is anticipated to begin in Sept. 2025, construction would begin in Nov. 2026, and substantial completion would be anticipated for the Summer of 2027.

While design and construction of this individual building cannot be phased, this project is one component of a larger campus decarbonization plan related to the completion of the Geothermal Plant – Node 1. Once Geothermal Plant – Node 1 is operational, individual buildings could be added in a staggered approach.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued use of a less efficient heating & cooling system that is nearing its useful end of life, higher operating and maintenance costs of an aging system, not complying with state legislation that requires public institutions to reduce energy use and carbon emissions, potential fines for not complying with the state and federal energy performance standards (anticipated by 2027), requiring increased future costs due to construction escalation, and contributing to continuing and increasing impacts of climate change – both locally and globally.

If approved, this request would directly contribute to the requirement of meeting increasing energy efficiency performance standards and reducing greenhouse gas emissions to levels established by the State of WA, Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-term planning and sustainability goals.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

In the attached and related reports, systems other than geothermal ground source heat pumps were explored. Alternate systems evaluated include 1) existing system - gas fired boilers to produce steam, 2) using renewable natural gas to fuel existing boilers, and 3) VRF – Variable Refrigerant Flow systems that use air to air heat pump technology. More detail can be found in the reports, but to summarize the findings for each system:

1) Existing gas fired boilers – This system would result in no changes, no added upfront costs, and it would not address any of the problems or meet state energy use requirements.

2) Using renewable natural gas instead of more commonly available utility provided natural gas – While possible in theory, this resource is not feasible or affordable in the quantity required to heat the campus. If the renewable gas were available, current pricing would be approximately (10) times the current utility rate costs.

3) Switching individual buildings to VRF systems – This system could be used to heat and cool buildings, however it increases maintenance and operations costs substantially, components would be completely decentralized and less energy efficient, it would require area increases in each of the buildings to house additional equipment, air to air heat pumps can be problematic during the colder months in the eastern Washington climate, and mechanical equipment has a much shorter lifespan.

The recommendation of geothermal ground source heat pumps was chosen because it was the most effective system to address the problems on a long-term basis, it would allow the most reuse of existing campus infrastructure, it is the most energy efficient and would result in the largest decrease of carbon emissions, it would require the least amount of ongoing maintenance, and it would provide the most opportunity to incorporate into academic programs (Mechanical Engineering, Electrical Engineering, Sustainability, etc.) to leverage student learning opportunities and increase public awareness and

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:29PM

Project Number: 40000165

Project Title: Sutton Hall - Decarbonization

## Description

acceptance of sustainability.

### **Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

The largest impact would be on the University maintenance staff. Replacing aging equipment would lessen initial maintenance costs at each of the individual buildings, however these savings would be traded for related effort to operate the Geothermal Plant – Node 1. Overall, there would be a need to add some maintenance and operation staff for the new central plant (outside of this individual project).

Students and faculty would be served by this project through the incorporation of the facility and technology into academic programs.

The community would be served on an individual level by the awareness raised from the project and on a larger scale by the reduction in energy use and climate related impacts.

### **Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

There may be opportunities to apply available federal energy incentives to this project, however that will not be fully known until the system has been designed and communicated to those potential sources of funding.

### **Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

This project will support the University's strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and predesigns that have been mentioned above or are attached for reference. Ultimately, this will reduce the University's energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

### **Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not include IT specific costs, however there are tangential costs associated with energy management systems and building controls that will be coordinated with the IT department and are incorporated into the current estimate. See attached EWU decarbonization report for more detail. Final, updated costs will be refined further in design.

### **If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

NA

### **How does this project contribute to meeting the greenhouse gas emissions limits established in RCW70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

As mentioned, this project is a result of and directly contributes to the statewide goals mentioned above with the sole purpose of reducing greenhouse gas emissions, energy use, and to improve building energy performance. See attached studies and reports for specific details and anticipated results. Final results will be determined when the project is fully designed and incrementally introduced to the campus system.

### **How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

Being a state-owned facility, this project would help modernizing the building inventory and by reducing costs related to energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an

Date Run: 9/10/2024 12:29PM

Project Number: 40000165

Project Title: Sutton Hall - Decarbonization

## Description

example of responsible use of state funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally. The project directly serves the EWU campus and students and will be leveraged to support current academic programs and learning opportunities.

Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of jobs and the growth of technologies related to sustainability and energy efficiency.

**Is there additional information you would like decision makers to know when evaluating this request?**

This project is the result and one component of a comprehensive effort to research, plan, and implement options for the most effective, economically viable, and technologically feasible way to achieve the energy performance goals of the state while meeting the mission and values of Eastern Washington University. It is directly linked to the Geothermal Plant – Node 1, which would need to be constructed prior to the recommended improvements requested within this project.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay and has been included on the attached Direct Pay Form

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

NA

**Location**

City: Cheney

County: Spokane

Legislative District: 009

**Project Type**

Facility Preservation (Minor Works)

**Growth Management impacts**

There are no growth management impacts, the project is located on the existing Eastern Washington University Campus.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:30PM

Project Number: 40000167

Project Title: Huston Hall - Decarbonization

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 10

### Project Summary

Huston Hall is a preservation project that is one component of EWU's overall strategy to decarbonize the campus and comply with House Bill 1390. HB 1390 dictates that the campus must achieve a combined EUI of 112 kBtu/sf/yr. This individual project would replace an inefficient mechanical system, connect to a future Geothermal Plant, and repair or replace building controls and lighting components to improve energy efficiency.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campuswide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – This is a high priority project that is integrally linked and dependent on the Geothermal Node Plant that is being submitted as a separate capital budget request. Supported and justified by multiple studies noted below, this project along with the Geothermal Plant was found to be the most effective approach in addressing decarbonization and energy use for the University while also extending the life of existing, aging facilities. Other supporting studies, attached to this request or submitted separately in EWU's 25/27 budget request, include: Ground Source Heat Pump Feasibility Study, EWU Hydrogeologic Evaluation, Martin-Williamson Predesign, Civil Engineering Building – Applied Engineering Predesign, Lucy Covington Center Predesign, Geothermal Plant – Node 1 report, EWU Decarbonization Plan, and Energy Audits for existing buildings proposed to be connected to the Geothermal Plant (study underway).

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This individual project will help to reduce operating costs by lowering energy consumption and by replacing aging equipment with newer systems. See attached studies for more in-depth analysis and how this project is related to other proposed projects on campus.

Public safety improvements – It will serve to improve the safety and longevity of the existing building, and more importantly help to reduce the long-term impacts of climate change. This region is experiencing records setting temperatures and more intense wildfires year after year, including an evacuation notice due to local fires in 2023. If meaningful steps aren't taken to curb the impacts of climate change, conditions will continue to worsen for future generations.

Clarifying details – In summary, this project is part of a larger initiative to reduce energy use and carbon emissions on the campus by transitioning from burning fossil fuels (natural gas) to ground source heat pump technology (electric). As the new Geothermal Plant – Node 1 comes on-line, this existing building would then be connected to that system along with other

Date Run: 9/10/2024 12:30PM

Project Number: 40000167

Project Title: Huston Hall - Decarbonization

## Description

energy efficient measures.

Current condition of the facility/ system – The current building was originally constructed in 1915 and the last remodel was finished in 1984. Although it has been well maintained, due to age, the mechanical systems are nearing the end of their useful life and will require ever increasing maintenance and eventual replacement.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will entail design and construction to replace aging and obsolete mechanical equipment within Huston Hall, changing the primary heating source from steam (natural gas fired boilers) to ground source heat pumps (electric), and will tie to the proposed Geothermal Plant – Node 1.

Design is anticipated to begin in Sept. 2025, construction would begin in Nov. 2026, and substantial completion would be anticipated for the Summer of 2027.

While design and construction of this individual building cannot be phased, this project is one component of a larger campus decarbonization plan related to the completion of the Geothermal Plant – Node 1. Once Geothermal Plant – Node 1 is operational, individual buildings could be added in a staggered approach.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued use of a less efficient heating & cooling system that is nearing its useful end of life, higher operating and maintenance costs of an aging system, not complying with state legislation that requires public institutions to reduce energy use and carbon emissions, potential fines for not complying with the state and federal energy performance standards (anticipated by 2027), requiring increased future costs due to construction escalation, and contributing to continuing and increasing impacts of climate change – both locally and globally.

If approved, this request would directly contribute to the requirement of meeting increasing energy efficiency performance standards and reducing greenhouse gas emissions to levels established by the State of WA, Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-term planning and sustainability goals.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

In the attached and related reports, systems other than geothermal ground source heat pumps were explored. Alternate systems evaluated include 1) existing system - gas fired boilers to produce steam, 2) using renewable natural gas to fuel existing boilers, and 3) VRF – Variable Refrigerant Flow systems that use air to air heat pump technology. More detail can be found in the reports, but to summarize the findings for each system:

1) Existing gas fired boilers – This system would result in no changes, no added upfront costs, and it would not address any of the problems or meet state energy use requirements.

2) Using renewable natural gas instead of more commonly available utility provided natural gas – While possible in theory, this resource is not feasible or affordable in the quantity required to heat the campus. If the renewable gas were available, current pricing would be approximately (10) times the current utility rate costs.

3) Switching individual buildings to VRF systems – This system could be used to heat and cool buildings, however it increases maintenance and operations costs substantially, components would be completely decentralized and less energy efficient, it would require area increases in each of the buildings to house additional equipment, air to air heat pumps can be problematic during the colder months in the eastern Washington climate, and mechanical equipment has a much shorter lifespan.

The recommendation of geothermal ground source heat pumps was chosen because it was the most effective system to address the problems on a long-term basis, it would allow the most reuse of existing campus infrastructure, it is the most energy efficient and would result in the largest decrease of carbon emissions, it would require the least amount of ongoing maintenance, and it would provide the most opportunity to incorporate into academic programs (Mechanical Engineering, Electrical Engineering, Sustainability, etc.) to leverage student learning opportunities and increase public awareness and

Project Number: 40000167

Project Title: Huston Hall - Decarbonization

## Description

acceptance of sustainability.

### **Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

The largest impact would be on the University maintenance staff. Replacing aging equipment would lessen initial maintenance costs at each of the individual buildings, however these savings would be traded for related effort to operate the Geothermal Plant – Node 1. Overall, there would be a need to add some maintenance and operation staff for the new central plant (outside of this individual project).

Students and faculty would be served by this project through the incorporation of the facility and technology into academic programs.

The community would be served on an individual level by the awareness raised from the project and on a larger scale by the reduction in energy use and climate related impacts.

### **Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

There may be opportunities to apply available federal energy incentives to this project, however that will not be fully known until the system has been designed and communicated to those potential sources of funding.

### **Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

This project will support the University's strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and predesigns that have been mentioned above or are attached for reference. Ultimately, this will reduce the University's energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

### **Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not include IT specific costs, however there are tangential costs associated with energy management systems and building controls that will be coordinated with the IT department and are incorporated into the current estimate. See attached EWU decarbonization report for more detail. Final, updated costs will be refined further in design.

### **If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

NA

### **How does this project contribute to meeting the greenhouse gas emissions limits established in RCW70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

As mentioned, this project is a result of and directly contributes to the statewide goals mentioned above with the sole purpose of reducing greenhouse gas emissions, energy use, and to improve building energy performance. See attached studies and reports for specific details and anticipated results. Final results will be determined when the project is fully designed and incrementally introduced to the campus system.

### **How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

Being a state-owned facility, this project would help modernizing the building inventory and by reducing costs related to energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an

Project Title: Huston Hall - Decarbonization

## Description

example of responsible use of state funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally. The project directly serves the EWU campus and students and will be leveraged to support current academic programs and learning opportunities. Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of jobs and the growth of technologies related to sustainability and energy efficiency.

**Is there additional information you would like decision makers to know when evaluating this request?**

This project is the result and one component of a comprehensive effort to research, plan, and implement options for the most effective, economically viable, and technologically feasible way to achieve the energy performance goals of the state while meeting the mission and values of Eastern Washington University. It is directly linked to the Geothermal Plant – Node 1, which would need to be constructed prior to the recommended improvements requested within this project.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay and has been included on the attached Direct Pay Form

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

NA

**Location**

City: Cheney

County: Spokane

Legislative District: 006

**Project Type**

Facility Preservation (Minor Works)

**Growth Management impacts**

There are no growth management impacts, the project is located on the existing Eastern Washington University Campus.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:31PM

Project Number: 40000169

Project Title: Building Demo for Decarbonization - Morrison, Streeter, &amp; Isle

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 11

### Project Summary

The demolition of Morrison, Streeter, and Isle Hall is a request and one component of EWU's overall strategy to decarbonize the campus and comply with House Bill 1390. HB 1390 dictates that the campus must achieve a combined EUI of 112 kBtu/sf/yr. This demolition project would remove three existing buildings that are either vacant or underutilized and continue to consume a disproportionate amount of energy and resources.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campus wide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – This is a project that would immediately decrease the carbon footprint of the University by demolishing unused and underutilized structures.

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This individual project will help to reduce operating costs by lowering energy consumption by removing unused space from the campus inventory. Currently, energy and fiscal resources are being wasted on a small number of facilities that are beyond their useful life and are currently vacant or severely underutilized.

Public safety improvements – Removing buildings that are vacant will have an immediate impact on campus safety and security. As they stand, these structures create an attractive nuisance for vandalism and other forms of mischief. Campus police receive a disproportionate number of reports of vandalism, trespassing, and other security concerns related to these buildings.

Clarifying details – By removing these buildings from the campus, EWU will realize significant energy savings, greenhouse gas emissions, and decreased safety concerns. This will also help to align campus space utilization with current standards.

Current condition of the facility / system – The current facilities were constructed in the 1960s or earlier and are in significant disrepair. Their value to the campus does not equate to the amount of resources that would be required to maintain them, let alone make improvements so that they were functionally and programmatically appropriate for their use.

**What will the request produce or construct (pre-design/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will produce design and demolition documents that will ultimately be followed to demolish the existing buildings.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:31PM

Project Number: 40000169

Project Title: Building Demo for Decarbonization - Morrison, Streeter, &amp; Isle

## Description

### **How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued existence and challenges that the structures create for campus. Wasted resources, safety concerns, higher carbon emissions, and continued degradation of the structures would result. If approved, this request would directly contribute to the requirement of meeting increasing energy efficiency performance standards and reducing greenhouse gas emissions to levels established by the State of WA, Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-term planning and sustainability goals.

### **What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Three options were considered, including; 1) no action, seen noted outcomes above, 2) Remodeling and improving the existing structures would require a financial commitment that is not supported by the building's use, condition, or value, and 3) Demolish the structures for all of the benefits mentioned above.

### **Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

The largest impact would be on the University maintenance and operation staff. Removing the structures would result in lower operation and maintenance costs for campus trades. This would free up precious resources that could be used elsewhere to maintain and improve other areas and to reduce the preventative maintenance backlog.

Students would be served by improving campus safety.

The community would be served through the reduction in energy use and climate related impacts.

### **Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

None are anticipated at this time.

### **Describe how this project supports the agency's strategic master plan or would improve agency performance.**

#### **Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

This project will support the University's strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and predesigns that have been mentioned above or are attached for reference. Ultimately, this will reduce the University's energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

### **Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

NA

### **If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

NA

### **How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

As mentioned, this project is a result of and directly contributes to the statewide goals mentioned above with the sole purpose of reducing greenhouse gas emissions, energy use, and to improve campus energy performance.

### **How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

Being a state-owned facility, this project would help by reducing costs related to energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an example of responsible use of state funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally.

Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of local jobs.

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:31PM

Project Number: 40000169

Project Title: Building Demo for Decarbonization - Morrison, Streeter, & Isle

**Description**

Is there additional information you would like decisionmakers to know when evaluating this request?

This project is the result and one component of a comprehensive effort to research, plan, and implement options for the most effective, economically viable, and technologically feasible way to achieve the energy performance goals of the state while meeting the mission and values of Eastern Washington University.

Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).

Not anticipated at this time.

REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.

NA

**Location**

City: Cheney

County: Spokane

Legislative District: 009

**Project Type**

Facility Preservation (Minor Works)

**Growth Management impacts**

There are no growth management impacts, the project is located on the existing Eastern Washington University Campus.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 12

### Project Summary

2025 - 2027 Minor Works, Facilities Preservation projects are intended to preserve, protect and extend the lifecycles of specific buildings and building system on the Eastern Washington University Cheney campus. These projects promote quality stewardship of state assets and represent a positive return on investment for the university and the state of Washington.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

Preservation projects maintain, preserve, and extend the life of existing state facilities and assets and do not significantly change the facility or building footprint to address current or anticipated program changes. Examples of the projects are included in each subcategory and include: CEB Renewal (standalone), Decarbonization Projects, Building Envelope Improvements, HVAC improvements, and Roof Replacements.

Eastern Washington University is requesting \$9,850,000 in this category to address the areas that will increase the life of building systems and invest in state facilities.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This request will focus on scope, design, and the construction of many projects that will improve campus systems and buildings. There are no predesign studies required for this level of minor works projects. This project reflects the need for upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of if not the entire facility. In most cases the only new area would be determined by local AHJs who may require additional space.

The project(s) will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase, so if the approved funding is less than requested, a portion or smaller scope can be accomplished with the approved resources. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detailed budget for each area or project will be developed when design is undertaken. That information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

This request addresses specific upgrades and improvements to increase effective student learning, improve efficiency, extend system's lifecycles, and reduce operating costs overall.

Not taking action would result in the continued degradation of buildings systems, conditions, and operations. The costs for operations, including energy costs will continue to increase. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university students and staff. Catastrophic failures are more costly than planned upgrades and improvements. Strategic planning for upgrades, improvements, and replacements can avoid many problems that would otherwise negatively impact university offerings and increase operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Alternative 1) Renovation of the entire facility becomes a major project renovation. The goal of minor works projects is to extend building and systems lifecycles so that major projects with much larger costs are not necessary. Also, if systems in the

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## Description

facilities have lifecycle left it is more cost effective to preserve the system rather than having to demolish or replace completely. EWU strives to practice good stewardship of state assets and resources.

Alternative 2) Defer the work – Deferring the work can mitigate capital costs, inferior or less efficient systems cost more to operate and maintain. There is also the risk of catastrophic breakdowns or failures that could cause much more costly damage.

Alternative 3) Taking the space or system off-line until funding is available. – The spaces/systems listed in this request are high priority in nature for the safety, security, and operations of this institution. In most cases shutting down systems or structures is not a viable alternative.

Alternative 4) Do nothing – This alternative is the worst scenario because it combines the downsides of items 2 and 3 and is the most costly in the long-term.

Alternative 5) Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short-term needs of the students and the university, it will increase the life expectancy of systems and equipment, reduce cost of maintenance, and lower the energy usage by replacing equipment with higher efficiency components.

Alternative 5 is the best case scenario to balance high costs, potential reduction in instructional delivery, reduce the risk of catastrophic failure, and increase the value and lifecycle of university facilities.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the entire university community. Customers, students, faculty and staff, and the local community all benefit from a high performing institution. As stated under the problem/opportunity to be addressed, the university's core themes are realized when the facility is performing well. Since these projects are improvements, replacements, and upgrades there would be no new units added but rather the opportunities for growth and potential to increase access.

**Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

No other funding is anticipated.

**Describe how this project supports the agency's strategic master plan or would improve agency performance.**

**Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Flexibility — able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make fiscal sense"

### Facility Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond

## Description

existing boundaries.

6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

NA

**How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

EWU is in the final stages of completing a Decarbonization Plan that will inform Minor Works and serve to keep energy efficiency at the forefront of all of EWU's decisions. Preserving and upgrading existing systems to make them function better, perform better, and last longer all contribute to the State's and EWU's goals.

**How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

Being a state-owned facility, this project would help modernize the building systems and by reducing costs related to energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an example of responsible use of state funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally.

The project directly serves the EWU campus and students and will be leveraged to support current academic programs and learning opportunities.

Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of jobs and the growth of technologies related to sustainability and energy efficiency.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

NA

**Is there additional information you would like decisionmakers to know when evaluating this request?**

Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the values of EWU:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all.

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## Description

EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's facilities are an integral part of our education mission and the quality of these spaces directly enhance the student experience and subsequently their personal and professional success. Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rates and building community.

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

SubProject Title: Computer Engineering Building Renewal (standalone)

Project Phase Title: Design &amp; Construction

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 12

### Project Summary

Interior renovations to enable another department to utilize the building while increasing collaboration and communication between departments.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

Preservation projects maintain, preserve, and extend the life of existing state facilities and assets and do not significantly change the facility or building footprint to address current or anticipated program changes. Examples of the projects are included in each subcategory and include: CEB Renewal (standalone), Decarbonization Projects, Building Envelope Improvements, HVAC improvements, and Roof Replacements.

Eastern Washington University is requesting \$2,000,000 to address interior improvements needed at the Computer Engineering Building.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This request will focus on design and construction of interior departmental improvements at CEB to allow another engineering department to utilize a portion of the third floor. This will free up space elsewhere on campus but more importantly allow the two engineering divisions to collaborate.

The project(s) will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase, so if the approved funding is less than requested, a portion or smaller scope can be accomplished with the approved resources. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detailed budget for each area or project will be developed when design is undertaken. That information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

This request addresses specific upgrades and improvements to increase effective student learning, improve efficiency, extend system's lifecycles, and improve collaboration between departments.

Not taking action would result in a continued teaching and learning environment that does not fully support faculty or students to achieve to their potential.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Alternative - Do nothing – In this case, the only other alternative is to do nothing and thereby lessen the impact of both divisions.

**Is there additional information you would like decisionmakers to know when evaluating this request?**

Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the values of EWU:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are redesigned strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's facilities are an integral part of our education mission and the quality of these spaces directly enhance the student experience and subsequently their personal and professional success. Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rates and building community.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000172

SubProject Title: Facilities Preservation - Clean Building Compliance

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 12

### Project Summary

Facilities Preservation - Clean Building Act and Campus Decarbonization - Eastern Washington University in compliance with House Bill 1257 and 1390 is requesting funding to improve the efficiency and reduce the university's carbon footprint of campus buildings.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Art, Communications, Digital Media (RTV), Theatre and Music's buildings systems are at the end of their functional lifecycle and need major upgrades and renewals. These systems, due to their age and original design are not as energy efficient as they once were and certainly do not come close to the efficiencies available through current technologies. These systems include but are not limited to: Heating and Ventilation equipment and distribution systems, Temperature controls and Building Automation Systems (BAS), lighting upgrades and lighting controls. These systems are 1970s generation which are costly to operate primarily as a result to their lack of energy efficient equipment and methods of operation.

On May 7, 2019, the Clean Buildings bill, House Bill 1257, was signed into law. The objective is to lower costs and pollution from fossil fuel consumption in the state's existing buildings, especially large commercial buildings. The law requires the Washington State Department of Commerce to develop and implement an energy performance standard for these buildings and provide incentives to encourage efficiency improvements.

**Eastern Washington University requests \$2,000,000 in this category to address building issues related to the House Bill 1257 and 1390. This will increase building efficiency and reduce utility operating costs.**

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000172

SubProject Title: Facilities Preservation - Clean Building Compliance

**Current Facilities Condition Assessment (FCA) for Art, Communications, Digital Media (RTV), Theatre, and Music.**

- 1 - Superior
- 2 - Adequate
- 3 - Fair; System approaching end of expected lifecycle
- 4 - Needs Improvement, Limited Functionality
- 5 -Needs Improvement, Marginal Functionality

The Art Building was constructed in 1972 and has a total FCA of 3.5 with Services FCA of 3.5. HVAC/Controls FCA of 4; Fire Protection FCA of 5; and Electrical FCA of 4.

The Communications Building was constructed in 1970 and has a total FCA of 2.6. Services FCA is 3.4; with HVAC/Controls FCA of 4; and Electrical of 4.

The Theatre Building was constructed in 1970 and has a total FCA of 3.2 with Service FCA of 4. HVAC/Controls FCA of 4; Fire Protection FCA of 4; and Electrical FCA of 3.

Digital Media Building (RTV) was constructed in 1972 and has total FCE of 2.1 with Services FCA of 2.8. HVAC/Controls FCA is 3; Fire Protection FCA is 5; and Electrical FCA is 3.

Music Building was constructed in 1970 and has a total FCA of 2.7 with Service FCA of 3.5. HVAC/Controls FCA is 4; Fire Protection FCA is 4; and Electrical FCA is 3.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will address the facilities at the top of the list Eastern prioritized for compliance with HB1257. The facilities at the top of that list are the Art Building, Communications Building, Music Building, Theater Building and Radio/Television (now call Digital Media) Making this improvement will reduce the cost of utilities to operation these facilities.

This project, once funded would develop, design and construct improvements to heating, ventilation, air conditioning and electric equipment as well as improve systems thus increase efficiency and reduce the carbon footprint of these buildings. This project reflects the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or even the entire facility. In most cases the only new square feet added would be determined by local jurisdiction that have the authority to require addition space be added.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with the approved resources. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action? Retrofitting HVAC systems and equipment provides several other benefits:**

1. **Energy Savings** - Retrofitting HVAC equipment is one of the quickest ways to solve chronic problems with high energy consumption. On average, small offices and retail establishments reduce energy consumption by 35% when retrofitting HVAC systems and equipment. In cold weather climates, this number can jump to as high as 40%.
2. **Increased HVAC Lifespan** - Replacing defective parts gives the HVAC equipment new life. In fact, sometimes this can even extend the life of a system by several years, spending far less money than a whole system replacement.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000172

SubProject Title: Facilities Preservation - Clean Building Compliance

3. **Flexibility** - Commercial spaces are constantly changing interiors are rearranged, occupants move in and out, and infrastructure requirements change. Retrofitting HVAC systems allows for continued adaption of the needs of occupants without huge investments.
4. **Improved Comfort** - A retrofitted HVAC system will operate with more consistency than an older or poorly maintained system. This consistency leads to more control over temperature in humidity, resulting in improved comfort for occupants.
5. **New Technology** - Not only do retrofitted systems operate more consistently, but they also operate more efficiently and independently. This adds to energy savings, as mentioned, but it also decreases to costs of maintenance and service because the new part will be more dependable.
6. **Faster Return on Investment (ROI)** - Retrofitting equipment is much cheaper than investing in a whole commercial HVAC system replacement. Given the energy and service savings of retrofitted equipment, return on investment is achieved quicker than a full replacement.

### Benefits of Lighting Control Systems

1. **Increased Energy Efficiency** - Smart lamps can be 80% more efficient than standard lighting lamps, only use lighting when space is in use and if programmed properly lighting is turned off when space does not have a programmed activity scheduled.
2. **Better programming of lighting needs to align with space usage** - Lighting can be scheduled to align with space use. Spaces that are used less will be "asleep" saving on electricity and wear on lamps.
3. **Enhanced Convenience** - Users can make on the spot changes when needed and after that need is fulfilled system returns to standard programming processes.
4. **Improved Safety** - Allows for lighting to activate when needed for personal safety and property protection.

### Improvement of the Building Envelop

The envelope serves to protect the interior while facilitating climate control. Building envelope arguably encompasses the entire exterior building system of the structure. This includes windows, doors, roof, floor, foundations, and insulation.

### Improving Indoor Air Quality (IAQ)

Washington State Department of Health states indoor air quality can have a significant effect on your health. Studies show that people spend 65 to 90 percent of their time indoors, and indoor air can be two to five times more polluted than outdoor air. The young, elderly, chronically ill, and those with respiratory or cardiovascular disease are often the most impacted by poor indoor air quality.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

**Alternative 1)** Renovation of the entire facility is a major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major projects with major costs are not necessary. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This again is a good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also a risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not a viable alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000172

SubProject Title: Facilities Preservation - Clean Building Compliance

Space is not available, can become unusable, may be a safety and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected since it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best case scenario to balance high costs, potential reduction in instructional delivery, reducing the risk of catastrophic failure and increasing the value and lifecycle of university facilities.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the entire university community. That includes our customers, students, as well as the faculty and staff that serve the student on their scholastic journey. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university's core themes are improved when we improve our facilities. Since these projects are improvements, replacements, and upgrades there would be no new units added but rather the opportunities for growth and potential to increase access for people.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are no matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance.**

**Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan – core themes listed above.**

### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000172

SubProject Title: Facilities Preservation - Clean Building Compliance

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1390
- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan
- > Americans with Disabilities Act - 2010 Design Standards

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### Is there additional information you would like decision makers to know when evaluating this request?

Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

SubProject Number: 40000173

SubProject Title: Facilities Preservation - Exterior Building Envelope

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 12

### Project Summary

Facilities Preservation - Exterior Building Envelope - Eastern Washington University in a effort provide quality stewardship of state and university facilities is requested funding to upgrade and repair building envelopes on Cheney campus buildings.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

The Cheney campus of Eastern Washington University has approximately seventy (70) buildings with the average year of construction being 1970. While some of our facilities were constructed after that date, the majority were constructed in the 1950's and 1960's. The effects of time and weather have resulted in many of the buildings requiring more attention in the areas of: Increased energy consumption required to maintain a temperate interior climate; stop leaks mainly due to the age of existing masonry repairs systems on a case-by-case basis where structural settlement or other shifting has occurred. The effects of compromised building envelopes also present indoor air quality issues that have affected students, faculty, and staff in various buildings at various times. Most of our buildings have masonry exterior perimeters that have not been address for many years, in some case since the buildings were originally constructed.

***This request is for the improvements and upgrades of Exterior Building Envelopes on buildings on Eastern's Cheney Campus. The request is for \$2,000,000. Huston Hall, John F. Kennedy Library, Performing Arts Pavilion, Physical Education Activities, and Cheney Hall.***

Technologies related to building construction have advanced considerably since these facilities were originally constructed. New window and door systems provide much better insulating properties than similar systems designed in the last century and will go far toward mitigating energy loss. Building envelope materials and techniques for application have eliminated many time-dependent leak issues that are present in these older buildings. All buildings require exterior surface maintenance/upgrades on occasion to maintain the qualities of the building envelope, and it is time for a number of our buildings to receive such attention.

These requests are priority based upon on-going assessment, review and prioritization of campus facilities operations and the needs to support effective operation management. These projects were identified through evaluation of our current systems by architectural engineering consultants, regulatory agencies and plant staff. We captured the costs to maintain and operate the existing structures through our computerized maintenance management system (CMMS) and identified the properties and systems that are generating high operation costs and concerns. Once the maintenance items are captured, we then prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

SubProject Number: 40000173

SubProject Title: Facilities Preservation - Exterior Building Envelope

and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

**Building Shell Current Facilities Condition Assessment (FCA) for Huston Hall, Isle Hall, JFK Library, Martin Hall, Perform Arts Pavilion, Physical Education Activities, Cheney and Cadet Halls.**

- 1 - Superior
- 2 - Adequate
- 3 - Fair; System approaching end of expected lifecycle
- 4 - Needs Improvement, Limited Functionality
- 5 -Needs Improvement, Marginal Functionality

Huston - Built 1915 remodeled 1984, Shell - 2.7 FCA

Isle Hall - Built 1956, Shell 3.9 FCA

JFK Library - Built 1968 remodeled 1995, Shell 2.5 FCA

Martin Hall - Built 1937 remodeled 1982, Shell 3.3 FCA

Performing Art Pavilion - Built 1975, Shell 2.7 FCA

Physical Education Activities - Built 1972, Shell 2.7 FCA

Cheney Hall - Built 1966, Shell - 2.8 FCA

Cadet Hall - Built 1956, Shell - 3.0 FCA

Facilities preservation projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Eastern building maintenance staff together with architectural and engineering consultants have identified and prioritized a condition report for our numerous campus structures. From this list building specific projects will be executed for the highest priority facilities based on certain criteria. These projects will install new windows and doors, upgrade exterior masonry, and minor structural and weatherization repairs based on the priority list.

Once funding is approved, we will design and construct projects that will replace or improve the systems or equipment indicated in the proposal. Design on these project will start as soon as funding is approved in July of 2025. Construction will follow as soon as the design and bid for the project are completed. These projects will be scheduled for construction

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000173

SubProject Title: Facilities Preservation - Exterior Building Envelope

throughout the biennium in coordination with other departments to minimize disruptions, to work around seasonal weather conditions that are related to the scope of work, and finally depending upon the current workload of university staff, implement the projects or manage the contractor that installs the projects.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phased, so if the approved funding is less than requested, a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

Requests contained in Minor Works Preservation are already developed to be phased once funding is approved. The university understands that funding will not always be available at the level of the request, therefore we plan our projects to be dynamic and flexible with the funding that is made available. We will either reduce the scope of specific projects or reduce the facilities being addressed in this request.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

This project will decrease energy consumption related to each facility. The project will also reduce damage to various types of equipment due to leaks within the buildings. By not taking action to replace leaky windows, doors, and masonry the university will not be making the most efficient use of our allocated funds. Instead, we will continue to spend more on energy consumption which results in spending less on energy conservation. Unfortunately, the result of taking no action will increase the potential for systems not to perform as needed in all situations. Without addressing the critical and key facilities issues, operation costs will continue to rise. This includes regular preventative actions, demand maintenance, and utility costs associated with lower performing equipment and systems. This impacts the ability to provide a safe, comfortable and accessible campus for all that use it.

As is the case with reduction of approved funding, the university will prioritize the highest needed projects and defer other as required. In many cases there will be an additional burden on our operation budgets. Currently, our estimates for this project are based upon cost per square foot or budgetary estimate provide by paid consultants or internal staff generated estimates. Once funding is approved, and design is underway, more detailed cost estimate will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures is not an alternative to the university.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000173

SubProject Title: Facilities Preservation - Exterior Building Envelope

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the students on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University strategic core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

**SubProject Number: 40000173**

**SubProject Title: Facilities Preservation - Exterior Building Envelope**

- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

SubProject Title: Facilities Preservation - Exterior Building Envelope

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### **Is there additional information you would like decision makers to know when evaluating this request?**

Eastern's facilities are in integral part of our education mission and the quality of these spaces directly enhance the student experience and subsequently their personal and professional success. Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rates and building community.

SubProject Number: 40000174

SubProject Title: Facilities Preservation - HVAC Improvements

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 12

### Project Summary

Facilities Preservation - HVAC Improvements - Eastern Washington University's planning process includes projects that will upgrade, renew and replace Heating, Ventilation and Air Conditioning Systems and temperature controls on various academic buildings. The intent is to improve quality of spaces, reduce energy and operating costs and provide a safe, healthy and quality spaces for the university students and staff.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

The Eastern campus consist of approximately 3,000,000 gross square feet of facilities of which approximately 75% are state funded facilities. There are many older buildings that are in current need of Heating, Ventilation and Air Conditioning equipment renewal and upgrades to keep the buildings operating and providing quality spaces for student instruction and other activities related to campus. These projects were selected through evaluation of our current systems by engineering consultants, regulatory agencies and operating staff.

***This request is to upgrade, improve and replace Heating Ventilation and Air Conditioning equipment on Kingston Hall and Cheney Hall. This request is for \$2,000,000 to improve the heating and cooling operations on these academic buildings.***

These requests are priority based upon on-going assessment, review and prioritization of campus facilities operations and the needs to support effective operation management. These projects were identified through evaluation of our current systems by architectural engineering consultants, regulatory agencies and plant staff. We captured the costs to maintain and operate the existing structures through our computerized maintenance management systems (CMMS) and identified the properties and systems that are generating high operation costs and concerns. Once the maintenance items are captured, we then prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

### Current Facilities Condition Assessment (FCA)

- 1 - Superior
- 2 - Adequate
- 3 - Fair; System approaching end of expected lifecycle
- 4 - Needs Improvement, Limited Functionality
- 5 - Needs Improvement, Marginal Functionality

### Buildings under consideration

Cheney Hall – Overall 2.6; Services 3.0; HVAC/controls 3.5 ;Fire Protection 5; Electrical 3

Kingston Hall – Overall 2.5; Services 3.1; HVAC/controls 3.75; Fire Protection 4; Electrical 3

Showalter Hall – Overall 2.6; Services 3.6; HVAC/controls 4; Fire Protection 3; Electrical 4

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students

from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Facilities preservation projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Eastern building maintenance staff together with architectural and engineering consultants have identified and prioritized a condition report for our numerous campus structures. From this list building specific projects will be executed for the highest priority facilities based on certain criteria.

These projects will improve, renew, and upgrade HVAC and temperature controls systems for the buildings listed. Once funding is approved, we will design and construct projects that will replace or improve the systems or equipment indicated in the proposal. Requests contained in Minor Works Preservation are already developed to be phased once funding is approved. The university understands that funding will not always be available at the level of the request, therefore we plan our projects to be dynamic and flexible with the funding that is made available. We will either reduce the scope of specific projects or reduce the facilities being addressed in this request.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phased, so if the approved funding is less than requested, a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?** These updates are focused on improving heating and cooling within these academic building. This will improve performance, energy efficiency and indoor air quality (IAQ). These improvements will also increase the lifecycle of the building at a lower cost than a full building remodel.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities. Project costs are currently estimate at rough order of magnitude until our design consultants can program and develop the improvements. If funding is approved a full detailed cost estimate would be available for review, if requested.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the students on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University strategic core themes are listed above.

### Facilities Master Plan - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including**

expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

Eastern's facilities are in integral part of our education mission and the quality of these spaces directly enhance the student experience and subsequently their personal and professional success. Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state’s premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rates and building community.

## SubProjects

SubProject Number: 40000175

SubProject Title: Facilites Preservation - Roof Replacements

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 12

### Project Summary

Facilites Preservation - Roof Replacements - Renewal, replacement and major roofing repairs on Eastern Washington University's Cheney campus allow for high quality instructional and student activity spaces, as well as reduce campus maintenance costs and increase the life span of campus buildings.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about th current condition of the facility or system.**

Eastern Washington University operates and maintains approximately (70) buildings on Cheney's campus with roof construction of varied age, condition, and assembly. The largest percentage of EWU buildings have flat roofs, with a small percentage having folded plate, or traditional style sloped roofs. EWU continues to spend an exceeding amount of time and capital to repair and maintain building interiors that are damaged or ruined due to roof leaks caused by ongoing deteriorating of roof assemblies and roof details. Wet ceilings and floors in public spaces, mechanical spaces, and maintenance areas become a safety concern for obvious reasons. As well, roof assemblies with wet "polyiso" roof insulation, common to most roof assemblies on this campus, have lost thermal properties that keep buildings cooler in the summer and warmer in the winter. This condition results in higher energy costs while trying to maintain a range of temperature that is conducive to instruction and learning.

The goal of EWU through long term planning, maintenance, and prioritization is to optimize the performance of our roof systems over time. It is imperative that roofs ranked in poor condition according to our Condition Facility Assessment, and identified with ongoing roof survey work, be repaired or replaced. In support of this approach in 2018 EWU enlisted Northwest Roof Consultants, Inc. to perform a campus wide roof assessment of (17) buildings. The consulting teamwork and analysis had the support of historical maintenance data, building assembly details, and previous roof project data compiled by EWU. The survey includes assessment of overall roof condition through observation, moisture scanning, roof coring, and includes a summary of potential cost for repair or replacement of existing roof systems. The assessment is to serve as support for implementing both current and future repair and replacement projects.

***EWU is requesting \$2,000,000 to support our ongoing efforts to improve campus wide roofing with the following buildings being our focus moving forward: Showalter Hall, Monroe Hall, Physical Education Classrooms, The Art Building, and Sutton Hall. A phased approach for roofs currently identified for replacement is not under consideration. However, a phased approach will be considered for repair type projects. Overall roof condition, cost, and warranty renewal or extension are determining factors in how the project will be phased, and how funds will be allocated.***

These requests are priority based upon on-going assessment, review and prioritization of campus facilities operations and the needs to support effective operation management. These projects were identified through evaluation of our current systems by architectural engineering consultants, regulatory agencies and plant staff. We captured the costs to maintain and operate the existing structures/systems through our computerized maintenance management systems (CMMS) and identified the properties and systems that are generating high operation costs and concerns. Once the maintenance items are captured, we then prioritized these projects to improve and extend the lifecycle of our systems, equipment and to reduce the maintenance and operating cost for the university.

Monroe Hall – Roof FCA 3.0

Physical Education Classroom – Roof FCA 3.0

Art Building – Roof FCA 3.0

Sutton Hall – 2.5

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Facilities preservation projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issues, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Eastern building maintenance staff together with architectural and engineering consultants have identified and prioritized a condition report for our numerous campus structures/systems. From this list building specific projects will be executed for the highest priority facilities based on certain criteria.

Ongoing maintenance and repair within our academic classrooms, common spaces, and faculty and staff offices cause interruption to instruction and effect overall program inefficiency, building performance, and overall operations. Addressing

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000175

SubProject Title: Facilities Preservation - Roof Replacements

the health of the roof with a "from the top down" policy is key to eliminating these types of issues in advance of their arrival. Additionally, this approach benefits the performance and longevity of the roof system for the short and long term. In order to achieve the expected lifecycle of a roof system, continual capital support should be allocated to this important but often overlooked element of infrastructure to ensure that small roof issues do not become larger operational or public safety problems.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phased, so if the approved funding is less than requested, a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

These updates are focused on improving roofing on academic and student activity buildings. Upgrades and replacement of roofs and roofing specialties improves the quality of the interior spaces and prevents damage to other systems in the buildings. Roofs have predetermined lifecycles and university maintenance staff and maintenance programs support longevity of roofing and other systems.

Unfortunately, the result of taking no action will increase the potential for systems not to perform as needed in all situations. Without addressing the critical and key facilities issues, operation costs will continue to rise. This includes regular preventative actions, demand maintenance, and utility costs associated with lower performing equipment and systems. This impacts the ability to provide a safe, comfortable, and accessible campus for all that use it. As is the case with reduction of approved funding, the university will prioritize the highest needed project and defer other as required. In many cases there will be an additional burden on our operation budgets.

Currently, our estimates for this project are based upon cost per square foot or budgetary estimate provide by paid consultants or internal staff generated estimates. Once funding is approved, and design is underway, more detailed cost estimate will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:32PM

Project Number: 40000171

Project Title: Minor Works: Preservation 2025-27

## SubProjects

SubProject Number: 40000175

SubProject Title: Facilities Preservation - Roof Replacements

Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the students on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase. These projects do not add any new units but provide the ability for the university to use all of its capacity as needed for student instruction and reduce the risk that portion of the these building will not be affective due to roof leaks and other maintenance issues.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance.**

**Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University strategic core themes are listed above.

### Facilities Master Plan - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates and building community.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 13

### Project Summary

2025 - 2027 Minor Works, Health, Safety and Code Compliance projects are targeted to improve health and safety in and around campus facilities. Compliance with local and regional regulatory agencies is also addressed within this category to update and improve responses to codes and other compliance requirements around safety and health of campus users.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Preservation projects maintain, preserve, and extend the life of existing state facilities and assets and do not significantly change the facility and building footprint to address current or anticipated program changes. Health, Code and Compliance projects are preservation projects that directly address those system and area that either do not meet the university standards for provide as safe or healthy environment or need upgrades and improvement to meet changing code and compliance agency requirements for the public. Together preservation and health and safety projects provide safer and high quality work spaces for university students and staff. Examples of the projects are included in each subcategory and include Fire detection, suppression and reporting; Exterior lightning improvements; Access controls system improvements; Elevators improvement and upgrades; and Emergency Generator replacement.

***Eastern Washington University is requesting \$9,850,000 in this category to address projects that will provide for higher levels of safety and improve the health environment of the campus while aligning with current upgrades to building code and other regulatory requirements.***

#### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issues, and improve the operation conditions of the systems and therefore provide high quality instructional, research and student engagement areas on the university campus.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## Description

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This will request will scope design and construction implementation for many subprojects that will improve campus systems and buildings with regard to fire detection, suppression and reporting; exterior lighting; access controls systems; elevators and emergency generators. There are no predesign studies required for this level of minor works projects. This project reflects the need of upgrading existing equipment, or systems to increase safety, health, security, regulatory compliance and extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction have authority requiring addition space.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Improving health, safety and compliance are the highest priorities for Eastern's Facilities and Planning unit. Upgrading, improving and replacement of systems components or systems will improve and resolve a variety of safety and compliance issues if high priority. As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Minor works projects this size do not require a predesign study.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## Description

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associate with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

Strategic Plan – core themes listed above.

Facilities Master Plan - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

# 370 - Eastern Washington University Capital Project Request

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## Description

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > Americans with Disabilities Act - 2010 Design Standards
- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > National Fire Protection Codes
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023/2024.

**Is there additional information you would like decision makers to know when evaluating this request?**

Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we

SubProject Number: 40000193

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

Starting Fiscal Year: 2024

Project Class: Preservation

Agency Priority: 13

### Project Summary

Facility Preservation - HSCC - Fire Detection/Reporting Systems - Providing a safe and secure environment for students and staff is the highest priority for Eastern Washington University. These systems upgrades, renewal and replacement are critical in providing the best possible outcomes for campus safety.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern Washington University has a state-of-the-art fire detection/reporting system (Fireworks). The system is a centrally monitored and supervised fire detection and reporting system. This system monitors all the university's building for supervisory and fire alarms within the building. The Fireworks system is connected to Edwards's fire alarm panels in many of the campus buildings.

The Fireworks system is considered critical infrastructure since it processes the signals that summon emergency services to campus buildings. This system needs replacement with a new version compatible with the latest updates, manufacture, and vendor support. Regularly the local jurisdiction having authority and the NFPA will require equipment and system upgrade when they have met or exceed their operational lifecycle.

***This request is for the replacement of Fireworks reporting system, updating other out of date fire alarm systems on EWU's Cheney campus. This request is for \$2,000,000.***

### ***Current Facilities Condition Assessment (FCA) for Fire Systems for buildings below.***

- 1 - Superior
- 2 - Adequate
- 3 - Fair; System approaching end of expected lifecycle
- 4 - Needs Improvement, Limited Functionality
- 5 - Needs Improvement, Marginal Functionality

Showalter Hall Built - 1915 partial remodel 2004, Fire protection and specialties FCA 4.0

Cadet Hall Built - 1956 partial remodel 1978, Fire protection and specialties FCA 4.5

Press box Suite - Built 2004, Fire protection and specialties FCA 3.0

Surbeck Services - Built 1971, Fire protection and specialties FCA 4.0

Grounds Storage Building - Built 1987, Fire protection and specialties FCA 3.5

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will consist of Replacing the Fireworks reporting system and the design and installation of fire alarm system in the highest priority building on campus including but not limited to Showalter Hall; Industrial area Complex; Cadet Hall; Press box Suites. New control panels, communication wiring and devices will be added to specific building on the priority list. The master panels are linked to the campus network back to the centrally monitored and dispatched alarms. This project will install new panels, pathway and end-field devices as required by the local jurisdiction and the NFPA. Projects will commence design as soon as funds are approved. Once the design is complete the project will be advertised and bid and scheduled to be completed during a time of the academic that least impacts the student and instruction on the campus. Since these projects are a building-by-building installation they can be phased, but this request is for the most critical facilities on our system currently.

Our estimates for this project are based upon cost per square foot or budgetary estimate provided by paid consultants or internal staff generated estimates. Once funding is approved, and the design is underway, more detailed cost estimates will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

The project will start as soon as the appropriations are approved (approximately July 2023) with the intent of completing the project prior to the end of the biennium (June 2025). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Improving health, safety and compliance are the highest priorities for Eastern's Facilities and Planning unit. Upgrading, improving and replacement of systems components or systems will improve and resolve a variety of safety and compliance issues. As is objectively the case, to not take actions will continue the degradation system and building conditions and

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000193

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

Also, since these are life safety issues, not addressing the issues put facility users at risk if the current systems are not working correctly or have component failures. If the local jurisdiction does not see the system in appropriate working order, they will require fire watches when the building is being used and could, if necessary, not allow academic classes to be held if there is potential for injury or loss of life.

As is the case with reduction of approved funding for the university, we will prioritize the highest demand project and defer others as required. In many cases, there will be an additional burden on our operation budgets.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Preservation, safety, and code compliance projects main goal is to maintain, preserve and extend the lifecycle of existing state facilities and assets. In most cases the systems and equipment addressed in these requests are at the end or past then end of their lifecycle and need upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goals of our strategic plan.

### Alternatives Considered are:

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best case scenario to balance high costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000193

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

Minor works projects this size do not require a predesign study.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associate with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance.

#### Reference feasibility studies, master plans, space programming and other analyses as appropriate.

Strategic Plan – core themes listed above.

Facilities Master Plan - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

#### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

## SubProjects

SubProject Number: 40000193

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > National Fire Protection Codes
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023/2024.

**Is there additional information you would like decision makers to know when evaluating this request?**

Priorities for the facilities' projects are focused on our base goals which are: First, the safety for our customers/clientele; Second, the protection of university assets; Third, to provide a comfortable and attractive place for our clients to work, learn,

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

play, and visit; Fourth, to extend the lifecycle of state assets, reducing the maintenance backlog and operating costs; Fifth, sustainable design and energy conservation; and lastly, reduction of waste and promoting reusable and recyclable products.

Good planning, system renewal and minor capital improvements allow for long term reduction of regulatory violations, operating costs, reduction of emergency or catastrophic failures and extension of the lifecycle of mission critical systems for the university.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic, and costly failures. Minor Projects reduce the frequency of emergencies and cost less on a long-term basis.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates, and building community.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000193

SubProject Title: Minor Works - HSCC - Fire Detection/Reporting Systems

Starting Fiscal Year: 2024

Project Class: Preservation

Agency Priority: 13

### Project Summary

Minor Works - HCC - Exterior Lighting Improvements - Providing safe access to our campus facilities with high quality, high efficiency exterior lighting meets one of the university goals of Access. This projects addresses safety and security issues and through university planning and design and replace or renew lighting system with more efficient systems and components.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern Washington University's Cheney campus contains approximately 3.0 million gross square feet of academic and student support facilities. The university owns approximately 320 acres of which about one-half is developed with buildings, sidewalks access drives and other facilities. Whether inside or outside these areas need quality and high efficiency light for life safety and property protection.

**This request is to upgrade and replace exterior lighting on Eastern's Cheney campus. The request is for \$700,000 to replace, upgrade and renew exterior lighting systems.**

This request is a priority as a part of pursuing Eastern's 2014 Comprehensive Campus Master Plan goals. The existing exterior site lighting was reviewed and found to be deficient regarding pedestrian safety, with many areas not sufficiently lit. Additionally, the exterior lighting systems that are in place in many areas are relatively old and do not provide sufficient lighting. However, they do expend a lot of energy in providing light to the locations where they are.

Lighting is an easy area to take advantage of recently developed energy saving technologies such as LED lighting control systems, LED replacement lighting and this will help save money in our electrical consumption costs, while at the same time improving lighting levels for safety and university access. Lighting improvements bring our campus current conditions into compliance with the Washington state requirements in energy efficiency, natural gas preservation & reduction of GHG green-house gas emissions.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** -EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000194

SubProject Title: Minor Works - HSCC - Exterior Lighting Improvements

programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and to provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Following a survey of our existing facilities, we have gone through many areas having the greatest priority for improvement and in the greatest need of deficiencies to correct. These areas will be the first phase to utilize modern energy saving LED technology.

The project will consist of installation of new lighting poles and bases to bring areas of the exterior lighting up to current codes and standards. The project will commence as soon as funds are approved. Because there are numerous areas in which the exterior has been defined as a need, these can be phased. This project will replace existing lighting fixtures and install new LED lighting fixtures at several locations around multiple buildings and parking lots located on the campus. EWU has identified priority Phase 1 areas to be modernized.

### Parking Lot Lights

- a) Lot P1A / Showalter Hall (Administration)
- b) Lot P5
- c) Lot P6
- d) Lot P7
- e) Lot P15
- f) Lot P17

### Campus Grounds Pedestrian Walkway Pole Lighting

- a) Walkways and areas around Music Building
- b) Art Building
- c) Communications Building
- d) Theatre Building
- e) CEB – Computer & Engineering Building
- f) Martin Hall
- g) Sutton Hall

The project will start after funding is approved and be completed within the 2023 biennium. The size of these projects has been scoped as to allow for prioritization of specific buildings or areas. Reduction in funding for this/these project would result in reduction of scope in one or more of the facilities listed or the reduction of the lower priority building systems that have been requested. We will continue to scope and prioritize these sized projects to meet our funding requests. Subsequently, we will obtain funding approval as to respond to the greatest need first and make the biggest reduction to our deferred maintenance backlog.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000194

SubProject Title: Minor Works - HSCC - Exterior Lighting Improvements

Currently, our estimates for this project are based upon cost per square foot or budgetary estimate provided by paid consultants or internal staff generated estimates. Once funding is approved and the design is underway, more detailed cost estimates will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

The size of these projects has been scoped as to allow for prioritization of specific buildings or areas. Reduction in funding for this/these project would result in reduction of scope in one or more of the facilities listed or the reduction of the lower priority building systems that have been requested. We will continue to scope and prioritize these sized project to meet our funding requests. Subsequently, we will obtain funding approval as to respond to the greatest need first and make the biggest reduction to our deferred maintenance backlog.

### **How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Replacement of existing lights and adding more lights to other areas will provide a more energy efficient and safe pedestrian experience. Because this is a life safety type project not completing this work puts our customers in potentially dangerous situations and requires the university police to utilize stretched resources by increasing their patrols to these darker areas of campus. New lighting will allow for the police to focus their work elsewhere, reduce energy consumption and provide safely lit walkways throughout various areas of the campus. This project provides for a safer and healthier campus environment as well as reduces energy consumption.

If this project is not funded our energy consumption would maintain the current levels thereby costing the university more in utilities, increasing our carbon footprint and reducing our opportunity to act as good stewards to the environment. Areas where lighting levels are sub-standard or un-safe will continue to be sub-standard and/or un-safe. As previously stated, this is also the opportunity to replace equipment and update systems that are reaching the end of their productive lifecycle and are high costs to maintain and operate. Periodic, regular replacement and upgrades extends the usable life cycle of our university facilities.

Improving health, safety and compliance are the highest priorities for Eastern's Facilities and Planning unit. Upgrading, improving and replacement of systems or elements will improve and resolve a variety of safety and compliance issues. As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

### **What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Preservation, safety, and code compliance projects main goal are to maintain preserve and extend the lifecycle of existing state facilities and assets. In most cases the systems and equipment addressed in these requests are at the end or past then end of their reasonable lifecycle and need upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources.

The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goals of our strategic

- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding— "the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

When systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

> House Bill 1257 Clean Building Act

### How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023/2024.

### Is there additional information you would like decision makers to know when evaluating this request?

Priorities for the facilities' projects are focused on our base goals which are: First, the safety for our customers/clientele; Second, the protection of university assets; Third, to provide a comfortable and attractive place for our clients to work, learn, play, and visit; Fourth, to extend the lifecycle of state assets, reducing the maintenance backlog and operating costs; Fifth, sustainable design and energy conservation; and lastly, reduction of waste and promoting reusable and recyclable products.

Good planning, system renewal and minor capital improvements allow for long term reduction of regulatory violations, operating costs, reduction of emergency or catastrophic failures and extension of the lifecycle of mission critical systems for the university.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic, and costly failures. Minor Projects reduce the frequency of emergencies and cost less on a long-term basis.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we

lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates, and building community.

Starting Fiscal Year: 2024

Project Class: Preservation

Agency Priority: 13

### **Project Summary**

Minor Works - HCC - Access Controls Systems Improvements - The renewal, upgrade and replacement of these Access Controls systems provide safety and security for campus users and well as property protection for university facilities.

### **Project Description**

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Items under this project include the replacement of our access controls system to buildings currently under the campus wide system, upgrades to specific hardware and additions high priority security and safety related spaces on campus.

***This request is to replace an obsolete building Access Control system on Eastern's Cheney campus. This will be phase two of the replacement this request is for \$1,500,000.***

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000195

SubProject Title: Minor Works - HSCC - Access Controls Systems Improvements

The safety and security of students, faculty, staff, and visitors are the university's highest priority. Additionally, the monitoring and protection of our state assets is critical to our success. The installation and expansion of University access controls and monitoring systems allow for cost effective monitoring, control, and risk mitigation regarding campus users and our facilities.

Eastern's facilities are complex and are resource intensive to maintain and operate. We are continually looking for ways to extend the lifecycle of facilities, systems, and deferred major capital expenditures to bring them up to a maintainable and cost-effective level. This project, like many of our Minor Works projects, is programmed to extend lifecycle, improve facilities quality for our customers, integrate innovative design into our projects, and reduce the long-term costs of the university and the state. We creatively designed these projects to respond to many of the needs within a single renovation or improvement.

### Operation Budget Savings

This project will create budget savings overtime with the ongoing replacement of an obsolete system that has costly and hard to procure replacement parts.

### Safety/Compliance Issues

This project will produce a higher level of safety with increased security monitoring and higher security credentials. Current Condition of the area/system/or facility from the Facility Condition Assessment. The current system is obsolete and being replaced this request is for phase two of the replacement.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The projects contained in this request are developed and a designed to address reductions in operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This is the second half of a phased project to replace an obsolete access control and security system. Access control projects requested under this project will construct additional systems for existing university buildings. Minor Works projects

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000195

SubProject Title: Minor Works - HSCC - Access Controls Systems Improvements

of this nature will begin design as soon as appropriations are approved and the budget is available. All work will be completed in the 2023-25' biennium unless circumstances, bidding and contract execution, scheduling work in buildings, or impact on the students requires a modified or extended schedule for completion. As with many Minor Works requests the installation of new access controls system can be phased by building. A list of buildings that currently do not have these systems is developed and when funding is received the top priorities on the list become the projects that are phased. Additional projects that are not funded would be deferred until such time as funding is available.

Currently, Estimates for this project are based on cost per square foot or budgetary estimates provided by paid consultants or generated by EWU internal staff. Once funding is approved, and the design is underway, more detailed cost estimates will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

The project will start as soon as the appropriations are approved (approximately July 2023) with the intent of completing the project prior to the end of the biennium (June 2025). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?** Improving health, safety and compliance are the highest priorities for Eastern's Facilities and Planning unit. Upgrading, improving and replacement of systems components or systems will improve and resolve a variety of safety and compliance issues if high priority. As is objectively the case, to not take actions will continue the degradation systems and building operations. The costs for operations, will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negatively impact university offering and operating costs.

Also, since these are life safety/property protection issues, not addressing the issues put facility users at risk if the current systems are not working correctly or have component failures. As is the case with reduction of approved funding for the university, we will prioritize the highest demand project and defer others as required. In many cases, there will be an additional burden on our operation budgets.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The project(s) identified and developed for this request are related to building security and facilities protection. They include keycard access controls system replacement; selective camera installation and replacement; data gathering and storage for security systems, and replacement of deficient equipment that is at the end of its lifecycle. These projects were identified through evaluation of our current system by engineering consultants, regulatory agencies, and plant staff. They also capture the costs associated with maintaining and operating existing systems through our computerized maintenance management program. These projects are prioritized to make the most affective impact for improving the systems and equipment, extending the lifecycle of systems, and reducing the maintenance and operating cost for the university.

Preservation, safety, and code compliance projects main goal are to maintain preserve and extend the lifecycle of existing state facilities and assets. In most cases the systems and equipment addressed in these requests are at the end or past then end of their lifecycle and need upgrading or replacement. System and equipment failure is not a productive alternative.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000195

SubProject Title: Minor Works - HSCC - Access Controls Systems Improvements

Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goals of our strategic plan.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – core themes listed above.

**Facilities Master Plan 2014 - Objectives**

1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

## SubProjects

SubProject Number: 40000195

SubProject Title: Minor Works - HSCC - Access Controls Systems Improvements

- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates, and building community.

Starting Fiscal Year: 2024

Project Class: Preservation

Agency Priority: 13

### Project Summary

Minor Works - HSCC - Elevators Improvements - Campus elevators are a critical component for students and staff, including those with physical restrictions that might not be able to reach programs and activities without these system working appropriately. The upgrade, renewal and replacement are required to meet the university's needs as well and meeting compliance requirements on campus.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

This project includes work to update and renew worn components, fixtures, and finishes within existing elevators and conveyance systems on campus. **The following building under consideration are: Showalter Hall, Art Building, Communications Building, Theatre Building, Digital Media (previously Radio/Television Building) and Cheney Hall.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000196

SubProject Title: Minor Works - HCC - Elevators Improvements

*This request is for upgrades and replacement of elevators and other conveyance equipment on Eastern's Cheney campus. The request is for \$2,000,000.*

Many of the elevators and wheelchair lifts on campus are older than their originally designed life span and need to be either repaired or replaced. This project will renew the life of these elevators by upgrading major system components with modern technology, such as digital controllers and door closers. These elevators will also be connected to newly installed fire detection systems so that they operate properly during fire alarm emergencies. Worn architectural finishes and ADA fixtures will also be updated to comply with modern elevator code requirements.

### Current Facilities Condition Assessment (FCA)

- 1 - Superior
- 2 - Adequate
- 3 - Fair; System approaching end of expected lifecycle
- 4 - Needs Improvement, Limited Functionality
- 5 - Needs Improvement, Marginal Functionality

Showalter Hall - Built 1915 (small remodel 2004), Elevator FCA 5.0  
 Art Building - Built 1972, Elevator – FCA 3.5  
 Communications Building - Built 1970, Elevator FCA 4.0  
 Theatre Building Elevator - Built 1971, FCA 4.0  
 Digital Media (RTV) Building - Built 1972, Elevator FCA 4.0  
 Cheney Hall - Built 1966, Elevator FCA 3.0

This is a priority due to Washington State Department of Labor and Industries elevator compliance requirements. Annual testing and certification of these lifts and elevators reports to the university those areas of concern and the wear and tear that this equipment is receiving. The elevator of concern are original equipment in buildings that were built in the 1970s. In academic and administrative building this equipment get heavy daily use and much of the equipment shows substantial wear.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will install and update current elevators and other conveyance systems. There are a number of projects encompassing this request and a number of start/completion dates planned. Minor Works request in this category will result and design and construction equipment and system upgrades that meet programmatic needs and regulatory compliance issues required by one or more of the following agencies/associations: (IBC) International Building Code; City of Cheney Building department and Fire Marshal; Washington's State Department of Labor and Industries Elevator Compliance division; and state and federal requirements for (ADA) Americans with Disabilities Act.

In this category there are a number of independent projects and system upgrades that extend past the resources that will be appropriated. As is consistently the case the university will prioritize a list of elevator projects and address the most pressing issues first. Those that can wait will be deferred until funding is available at a later date.

The size of these projects has been scoped as to allow for prioritization of specific buildings or areas. Reduction in funding for this/these project would result in reduction of scope in one or more of the facilities listed or the reduction of the lower priority building systems that have been requested. We will continue to scope and prioritize these sized project to meet our funding requests. Subsequently, we will obtain funding approval as to respond to the greatest need first and make the biggest reduction to our deferred maintenance backlog.

Currently, our estimates for this project are based upon cost per square foot or budgetary estimate provided by paid consultants or internal staff generated estimates. Once funding is approved and the design is underway, more detailed cost estimates will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

The project will start as soon as the appropriations are approved (approximately July 2023) with the intent of completing the project prior to the end of the biennium (June 2025). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?** Most of the elevators that need to be repaired or replaced within this project are out of compliance with ADA requirements. Most of these elevators are past designed life span and require renewal of major system components in order to continue operation. Doing nothing would guarantee failure of these elevators and thus create potential for harm to University student or staff. University elevators that do not meet current Washington State Department of Labor and Industries standards will require repairs, upgrades or will be taken out of service. As previously stated, this is also the opportunity to

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000196

SubProject Title: Minor Works - HCC - Elevators Improvements

replace equipment and update systems that are reaching the end of their productive lifecycle and are high costs to maintain and operate. Periodic, regular replacement and upgrades extends the usable life cycle of our university facilities.

Improving health, safety and compliance are the highest priorities for Eastern's Facilities and Planning unit. Upgrading, improving and replacement of systems components or systems will improve and resolve a variety of safety and compliance issues if high priority. As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

Also, since these are life safety/compliance issues, not addressing the issues put facility users at risk if the current systems are not working correctly or have component failures. As is the case with reduction of approved funding for the university, we will prioritize the highest demand project and defer others as required. In many cases, there will be an additional burden on our operation budgets.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

These projects were identified through evaluation of our current system by engineering consultants, regulatory agencies, and plant staff. They also capture the costs associated with maintaining and operating existing systems through our computerized maintenance management program. These projects are prioritized to make the most affective impact for improving the systems and equipment, extending the lifecycle of systems, and reducing the maintenance and operating cost for the university.

Preservation, safety, and code compliance projects main goal are to maintain preserve and extend the lifecycle of existing state facilities and assets. In most cases the systems and equipment addressed in these requests are at the end or past then end of their lifecycle and need upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date.

The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goals of our strategic plan.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other

## SubProjects

SubProject Number: 40000196

SubProject Title: Minor Works - HCC - Elevators Improvements

system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associated with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – core themes listed above.

**Facilities Master Plan 2014 - Objectives**

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

**Facilities Planning Principles**

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000196

SubProject Title: Minor Works - HCC - Elevators Improvements

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > Americans with Disabilities' Act - 2010 Design Standards
- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > National Fire Protection Codes
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000196

SubProject Title: Minor Works - HCC - Elevators Improvements

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023/2024.

### Is there additional information you would like decision makers to know when evaluating this request?

Priorities for the facilities' projects are focused on our base goals which are: First, the safety for our customers/clientele; Second, the protection of university assets; Third, to provide a comfortable and attractive place for our clients to work, learn, play, and visit; Fourth, to extend the lifecycle of state assets, reducing the maintenance backlog and operating costs; Fifth, sustainable design and energy conservation; and lastly, reduction of waste and promoting reusable and recyclable products. Good planning, system renewal and minor capital improvements allow for long term reduction of regulatory violations, operating costs, reduction of emergency or catastrophic failures and extension of the lifecycle of mission critical systems for the university.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic, and costly failures. Minor Projects reduce the frequency of emergencies and cost less on a long-term basis.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### *We transform our Region*

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates, and building community.

Starting Fiscal Year: 2024

Project Class: Preservation

Agency Priority: 13

### Project Summary

Minor Works - HCC - Emergency Generator Replacements - The university continues to replace and upgrade emergency back up power and generators to provide seamless uninterruptable power for campus emergency systems, Information Technology and other critical systems and operations.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Modern American life expects that a continuous and uninterrupted electrical power supply be readily available daily. This is also an important expectation for any modern university campus with its many mission critical functions and systems. Currently the university cannot guarantee uninterrupted power at all its mission critical facilities, and therefore this request is a priority. This request is for the improvements and replacement of emergency backup generator(s) and Uninterrupted Power Supply (UPS) on Eastern's Cheney Campus.

***The request is for \$800,000 to replace and renew emergency generators and other uninterruptable power sources on campus. Buildings under consideration are Cheney Hall, Martin Hall, Williamson Hall, Cadet Hall, Physical Education Classroom and Physical Education Activities Building.***

As required by several codes and laws, life-safety systems such as fire protection, access control, and security are required to have continuous power availability ensuring communication within their respective networks. EWU receives its electrical power from two separate feeds into the campus from the City of Cheney. However, history shows that even with having two sources, campus power is still entirely interrupted from time to time. In the event of future power outages on campus, the generators, Uninterruptable Power Supply (UPS) and their associated mission critical systems are needed to maintain safety and security to our students, faculty, staff, and visitors.

These selected pieces of equipment are identified because they have increasing high maintenance costs, are past their reasonable lifecycle or they current are not sized for the necessary needs that they serve.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000197

SubProject Title: Mnior Works - HSCC - Emergency Generator Replacements

and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The projects contained in this request are developed and designed to address back up power needs but also the equipment is specified to reduce energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will replace existing systems where defined, and install new generators, Uninterruptible Power Supply (UPS) systems and support systems (Automatic Transfer Switches, ATS) for emergency power at numerous locations across campus. There are several smaller projects encompassing this request and several start/completion dates planned. A phased project prioritization list based on evaluation by our engineering consultants, regulatory agencies, and plant electrical and generator maintenance staff has been developed. The projects are prioritized based on each facility's specific impact to the university in the event of a normal power system failure, and the existing conditions in place for handling emergency power during an outage at each installation location, developing a hierarchy of the most urgent buildings and areas to upgrade first.

The size of these projects has been scoped as to allow for prioritization of specific buildings or areas. Reduction in funding for this/these project would result in reduction of scope in one or more of the facilities listed or the reduction of the lower priority building systems that have been requested. We will continue to scope and prioritize these projects to meet our funding requests. Subsequently, we will obtain funding approval as to respond to the greatest need first and make the biggest reduction to our deferred maintenance backlog. Currently, our estimates for this project are based upon cost per square foot or budgetary estimate provided by paid consultants or internal staff generated estimates. Once funding is approved, and the design is underway, more detailed cost estimates will be developed and reviewed to provide information for project implementation and good stewardship of state resources.

The project will start as soon as the appropriations are approved (approximately July 2023) with the intent of completing the project prior to the end of the biennium (June 2025). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

## SubProjects

SubProject Number: 40000197

SubProject Title: Mnior Works - HSCC - Emergency Generator Replacements

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?** This project will reduce the risk of loss of university data within our Information Technology System. The data of concern includes the personal and/or financial information of students, faculty and staff, as well as numerous other forms of data which the university is required to safeguard. For example, archived records are both critical to the university's long-term operations, as well as require adherence to state and federal requirements related to the retention of records and data. Uninterruptible Power Supply (UPS) units provide backup power operations for all our fire and life safety equipment that provide, detection, reporting, suppression, and communication for the life safety component to the university in the event of a normal power loss.

By not taking action to replace these existing systems, needed clients of the university can expect that during a loss of power on campus, even minimal emergency reporting systems may not continue to operate and keep our facility users safe. Secondly, mission communication and data collection may not be operational, and financial data and electronic records of the university may be lost. As previously stated, this is also an opportunity to replace equipment and update systems that are reaching the end of their productive lifecycle and are high costs to maintain and operate. Periodic, regular replacement and upgrades extends the usable life cycle of our university facilities.

Improving health, safety and compliance are the highest priorities for Eastern's Facilities and Planning unit. Upgrading, improving and replacement of systems components or systems will improve and resolve a variety of safety and compliance issues if high priority. As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

Also, since these are life safety/property protection issues, not addressing the issues put facility users at risk if the current systems are not working correctly or have component failures. As is the case with reduction of approved funding for the university, we will prioritize the highest demand project and defer others as required. In many cases, there will be an additional burden on our operation budgets.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

These projects were identified through evaluation of our current system by engineering consultants, regulatory agencies, and plant staff. ## SubProjects

SubProject Number: 40000197

SubProject Title: Mnior Works - HSCC - Emergency Generator Replacements

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction in instructional delivery, risk of catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

The clients of Eastern Washington University, the students, and faculty, staff and community members will experience better customer service, delivery, and a quality environment when we manage our long- and short-term facilities goals properly. When operating costs are controlled, limited budgets are allocated more broadly across the university so that all facilities are maintained and operated in cost effective and high-quality manner.

The clientele associated with this project includes all Eastern Washington University students, faculty, and staff, as well as the Washington State Patrol Crime Laboratory and the Washington State Digital Archives facilities located on campus. This project also addresses community members and organizations that visit and use the campus for activities. These projects do not specifically add units to the university operations but responds to ongoing and continuing needs for high quality, safe, and secure spaces and facilities used for university and community activities. The university has a legal obligation across a wide range of Fire and Life-Safety codes as required by State and local Authorities Having Jurisdiction (AHJ). These obligations affect all the communities that use our facilities for academic instruction, student and community activities. Within this request there no intention of adding or expanding units but upgrading and or replacing equipment that is already in place that need to be improved to meet the needs of the university.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associate with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000197

SubProject Title: Mnior Works - HSCC - Emergency Generator Replacements

**Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

These projects are developed and prioritized based on the needs stated in the university Academic Strategic Plan (2017) and our Comprehensive Campus Master Plan (2014). These projects directly relate to our goal of “access” which includes the safety and security of all those who use our campus facilities. Projects included here affect many other state programs such as sustainability and cost-effective facilities management. All projects related to Minor Works Preservation – Life Safety Code Compliance relate to Eastern’s strategic goal to remain an “institution of innovation.” As a priority to us, we consider the aspects relating to high quality/cost effective improvement and replacements, greenhouse gas emissions and the reduction of our carbon footprint. These projects also address the reduction of the deferred maintenance backlog that stand as a priority of the state and university.

EWU expands opportunities for personal transformation through excellence in learning; by enhancing access to higher education in the Inland Northwest and beyond and supporting traditional college-bound students and those from under-served populations; delivering high quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning and promoting student success by supporting student engagement and timely degree completion.

**Strategic Plan** – core themes listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000197

SubProject Title: Mnior Works - HSCC - Emergency Generator Replacements

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**  
This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > National Fire Protection Codes
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan
- > Americans with Disabilities Act - 2010 Design Standards

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000197

SubProject Title: Mnior Works - HSCC - Emergency Generator Replacements

Priorities for the facilities' projects are focused on our base goals which are: First, the safety for our customers/clientele; Second, the protection of university assets; Third, to provide a comfortable and attractive place for our clients to work, learn, play, and visit; Fourth, to extend the lifecycle of state assets, reducing the maintenance backlog and operating costs; Fifth, sustainable design and energy conservation; and lastly, reduction of waste and promoting reusable and recyclable products. Good planning, system renewal and minor capital improvements allow for long term reduction of regulatory violations, operating costs, reduction of emergency or catastrophic failures and extension of the lifecycle of mission critical systems for the university.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic, and costly failures. Minor Projects reduce the frequency of emergencies and cost less on a long-term basis.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates, and building community.

Project Phase Title: Design &amp; Construction

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 13

### Project Summary

This project would work to address ADA deficiencies across campus, including restrooms, shower rooms, and general ADA accessibility.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

In 2008 the university hire a professional consultant to survey and review our campus facilities and ground to Americans with Disabilities Act (ADA) violations and provide a framework for improving those ADA conditions on campus. The university has used this comprehensive plan for our major capital project remodels as well as upgrading our existing and out of date facilities. The ADA program projects primarily achieve academic and student support goals. This group of projects include updating and improving spaces that are needed to improve program delivery and at the foremost accessibility to campus facilities and program space. Included are items that improve access to and the quality of the program spaces in which instruction takes place.

***Eastern Washington University is requesting \$2,000,000 in this category to address the need to upgrade American's with Disabilities Act design standards in our academic and student support facilities. Those areas that need improvement and upgrades to meet the strategic need of 'accessibility' on the Cheney Campus.***

the American's with Disabilities Act (ADA) was signed into law on July 26, 1990 by President George H. W. Bush. The ADA is a civil rights law that prohibits discrimination against individuals with disabilities in all areas of public life, including jobs, schools, transportation, and all public and private places that are open to the general public. Eastern's strategic plan is focused on providing "access" to high quality programs and service to our students. They are the reason that we are here. Periodically the university evaluates the access needs for all the campus buildings and other facilities. We track what has been repaired/upgraded and what is the next highest priority for the future. This request contains the highest priority areas that need to be addressed to afford students, staff, and community members safe and easy access to Eastern's Cheney Campus. In areas within our buildings that are outside the main public circulation ways, many deficiencies exist that encumber students or faculty members with disabilities.

These ADA related projects will significantly improve the spaces and their functionality and adherence to the law. The also address other compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for

## SubProjects

SubProject Number: 40000198

SubProject Title: Minor Works - ADA Improvements  
improvements.

Once staff had captured the needs and budgetary costs to respond, we prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will result in minor interior remodeling of a variety of spaces to eliminate circulation issues for those with disabilities. Following a study that identifies the locations of concern and severity of needs, designs will be prepared for construction. These projects are separate from major capital remodels on university facilities. These projects will be setup to occur in the short time windows between academic quarters. The first of these projects could start as soon as early December 2025.

Current project estimates are budgetary in nature. A more detailed estimate will be developed when funding is appropriated, and the university hires a consultant to better define the specific needs of the individual buildings and locations. All that information will be available when it is developed.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000198

SubProject Title: Minor Works - ADA Improvements

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

Over time, the university has remodeled several of the campus buildings in one form or another. Usually, the remodels involved a change of use where the building was being remodeled based on a program change. The design generally focused money and attention on the intended remodel, while areas beyond the remodel limits commonly did not receive upgrades related to ADA compliance, or other needs for that matter. Additionally, there still exist buildings on campus that have not received any accommodation for individuals with disabilities since originally being constructed. This request would focus on modifying existing facilities to meet current building code requirements and ADA standards.

By not acting, occupants of these buildings will continue to have negotiate their way through the facilities using deficient amenities that lack

current code required ADA accommodations. These existing deficiencies put EWU in a position of potential liability.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

The process for developing these projects requests is based on campus and program needs to have improved student outcomes. A variety of consideration are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternate below are considered and we work through the problem-solving process.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000198

SubProject Title: Minor Works - ADA Improvements

short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility

SubProject Number: 40000199

SubProject Title: Minor Works - Communications Bldg Restroom

Project Class: Preservation

Agency Priority: 13

### Project Summary

This project would address accessibility issues at the Communications Bldg Restroom.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

In 2008 the university hire a professional consultant to survey and review our campus facilities and ground to Americans with Disabilities Act (ADA) violations and provide a framework for improving those ADA conditions on campus. The university has used this comprehensive plan for our major capital project remodels as well as upgrading our existing and out of date facilities. The ADA program projects primarily achieve academic and student support goals. This group of projects include updating and improving spaces that are needed to improve program delivery and at the foremost accessibility to campus facilities and program space. Included are items that improve access to and the quality of the program spaces in which instruction takes place.

***Eastern Washington University is requesting \$850,000 to address the need to upgrade American's with Disabilities Act design standards in the Communications Building. Those areas that need improvement and upgrades to meet the strategic need of 'accessibility' on the Cheney Campus.***

the American's with Disabilities Act (ADA) was signed into law on July 26, 1990 by President George H. W. Bush. The ADA is a civil rights law that prohibits discrimination against individuals with disabilities in all areas of public life, including jobs, schools, transportation, and all public and private places that are open to the general public. Eastern's strategic plan is focused on providing "access" to high quality programs and service to our students. They are the reason that we are here. Periodically the university evaluates the access needs for all the campus buildings and other facilities. We track what has been repaired/upgraded and what is the next highest priority for the future. This request contains the highest priority areas that need to be addressed to afford students, staff, and community members safe and easy access to Eastern's Cheney Campus. In areas within our buildings that are outside the main public circulation ways, many deficiencies exist that encumber students or faculty members with disabilities.

These ADA related projects will significantly improve the spaces and their functionality and adherence to the law. The also address other compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

Once staff had captured the needs and budgetary costs to respond, we prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000199

SubProject Title: Minor Works - Communications Bldg Restroom

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### **Eastern Washington University's Core Themes include:**

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will result in minor interior remodeling of a variety of spaces to eliminate circulation issues for those with disabilities. Following a study that identifies the locations of concern and severity of needs, designs will be prepared for construction. These projects are separate from major capital remodels on university facilities. These projects will be setup to occur in the short time windows between academic quarters. The first of these projects could start as soon as early December 2025.

Current project estimates are budgetary in nature. A more detailed estimate will be developed when funding is appropriated, and the university hires a consultant to better define the specific needs of the individual buildings and locations. All that information will be available when it is developed.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000199

SubProject Title: Minor Works - Communications Bldg Restroom

resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

Over time, the university has remodeled several of the campus buildings in one form or another. Usually, the remodels involved a change of use where the building was being remodeled based on a program change. The design generally focused money and attention on the intended remodel, while areas beyond the remodel limits commonly did not receive upgrades related to ADA compliance, or other needs for that matter. Additionally, there still exist buildings on campus that have not received any accommodation for individuals with disabilities since originally being constructed. This request would focus on modifying existing facilities to meet current building code requirements and ADA standards.

By not acting, occupants of these buildings will continue to have negotiate their way through the facilities using deficient amenities that lack

current code required ADA accommodations. These existing deficiencies put EWU in a position of potential liability.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

The process for developing these projects requests is based on campus and program needs to have improved student outcomes. A variety of consideration are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternate below are considered and we work through the problem-solving process.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:33PM

Project Number: 40000192

Project Title: 2025 - 2027 Minor Works - Health, Safety and Code Compliance

## SubProjects

SubProject Number: 40000199

SubProject Title: Minor Works - Communications Bldg Restroom

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction in instructional delivery, risk of catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.

## SubProjects

SubProject Number: 40000199

SubProject Title: Minor Works - Communications Bldg Restroom

6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

High quality buildings and systems are critical for positive student outcomes. We are dedicated to offering access to students of all needs and abilities. At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

SubProject Title: Minor Works - Communications Bldg Restroom

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

**Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:**

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 14

### Project Summary

2025 - 2027 Minor Works - Infrastructure Preservation - Infrastructure systems at Eastern Washington University's Cheney Campus are integral to the operation of all campus facilities and systems. This request is for renewal and upgrading of key system components to increase effectiveness, efficiency and extend lifecycles of these critical system and associated equipment

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern Washington University owns 329 acres of property on the Cheney campus. Approximately 50% is developed with buildings and supporting facilities which total approximately three-million gross square feet. The campus utilities are centrally located and distributed. They include: Central Steam generation and distribution; Central Chilled water generation and distribution; a class A community water system; a medium voltage (13,200 volt) substation and distribution loop and a network of sanitary and storm sewer piping and specialties. The major utilities are distributed to campus buildings through approximately three miles of utility tunnels and utilidors which in some cases were originally constructed 75 years ago. The Cheney campus operates like a small town when it comes to utilities and infrastructure. These systems power the campus. They are essential to providing safe and high-quality buildings, grounds, and other support functions to the campus.

Infrastructure Preservation is a planning and implementation process that tracks, analyzes, and plans for successive upgrades and replacement of critical systems and system components. Systems are supported through both Major Capital Projects as well as Minor Works Projects. The latter are implemented to extend the life cycles of systems as well as making them more effective and energy efficient.

**Eastern Washington University is requesting funding in the category of Infrastructure Preservation for \$5,550,000. Subprojects for this request are: Medium Voltage switching and specialty equipment improvements and replacements; Utility tunnel repairs and replacements; Building Automations Systems Upgrades and Campus Walkways and Paver replacements.**

#### **Eastern Washington University's Core Themes include:**

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives;

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## Description

and Promoting student success by supporting student engagement and timely degree completion.

Infrastructure renewal and preservation is a top priority for central utility distribution facilities like Eastern Washington University. Since all building receive their utilities from the infrastructure, they cannot operate without an effective and efficient systems of distribution, control, and automation. The condition of these primary system is reviewed and reported regularly by Eastern staff and paid expert consultants. This collaboration is used to define and request legislative funding that keeps the campus operation, response to energy conservation and sustainability and brings the university infrastructure into compliance with local jurisdiction-having-authority and regulatory agencies. Facilities is responsible for the health, safety, security, and comfort of all that use the campus on a day-to-day basis.

The projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This will request will scope design and construction implementation many subprojects that will improve campus infrastructure systems, components, and equipment. There are no predesign studies required for this level of minor works, infrastructure projects. These projects reflect the need of upgrading existing systems, equipment, or systems to extend the useful lifecycle of portions of or the entire utility structure. In most cases the only new square feet added would be determined by local jurisdiction have authority requiring addition space.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

The primary goal of these projects in the sustained operations of the campus infrastructure. Better systems and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority. Whether better operations, better sustainable design and construction, better energy cost parameters, lower cost of operations other goals these projects are programmed, designed, and implement to meet university goals of access and high-quality instruction for our students.

As is objectively the case, to not take actions will continue the degradation systems and infrastructure conditions and operations. The costs for operations, including energy costs will continue to increase. Systems and equipment that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university daily operations and student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that could negative impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

As stated above the university continually reviews, surveys and track costs of these systems to building priority projects for

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## Description

renewal and upgrade. These projects are scrutinized by a problem-solving methodology to derive the highest need each biennium. From there the following alternatives are considered.

**Alternative 1)** Renovation of the entire system- major project renovation. The goal of minor works preservation projects like these are to extend systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – Infrastructure does not allow to take portion of the campus off-line due to the structure and distribution of utilities across the campus. The systems listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Facilities may not be available, systems can become unusable, there may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Minor works projects this size do not require a predesign study.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

Infrastructure renewal projects does not add square footage or new units but replaces and renews existing systems/equipment for continued high quality campus operations.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associate with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

**Strategic Plan** – core themes are listed above.

#### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## Description

- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## Description

- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

### **How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### **Is there additional information you would like decision makers to know when evaluating this request?**

The university infrastructure is the life blood of campus facilities, supplying all utilities from the central plant to each facility on campus. Without high quality systems the outcomes for student can be impacted and the university will not be able to meet its strategic goals.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

## SubProjects

SubProject Number: 40000135

SubProject Title: Minor Works - Infrastructure Preservation - Medium Volt Improve

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 14

### Project Summary

Minor Works - Infrastructure Preservation - Medium Volt Improvement - Eastern Washington University is requesting funding in this category to replace a portion of our medium voltage switchers for campus electrical distribution. This is critical infrastructure that provides electricity to all campus facilities.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Modern American life expects that a continuous and uninterrupted electrical power supply be readily available. This is also an important expectation for any university campus with its many mission critical functions and systems. A significant component in the backbone of the campus electrical system has exceeded its useful life and imminent failures are to be expected. This request is for the replacement of approximately one-third of the 27 existing medium voltage switches located in the tunnels on Eastern's Cheney Campus.

Infrastructure Preservation is a planning and implement process that tracks, analyzes, and plans for successive upgrades and replacement of critical systems and system components. Systems are supported through both Major Capital Projects as well as Minor Works Projects. The latter are implemented to extend the life cycles of systems as well as making them more effective and energy efficient.

***Eastern Washington University is requesting \$2,000,000 for the replacement of a portion of the medium voltage electrical switches on campus. These are critical infrastructure items that provide 13,200 volt power distribution from our sub-station to each building on campus.***

### Safety/Compliance

The existing medium voltage switches were installed underground within the university tunnel system in 1989, making these switches 33 years old. Being in the tunnel, which is legally defined as a confined space, and in tight quarters to various other conductive equipment performing annual switch maintenance requires staff electricians to work in an unsafe manner which are both safety and compliance issues. Additionally, the vacuum switches themselves use Sulfur Hexafluoride, an inert gas that provides the electrical insulating properties of the switch. This gas known to have adverse environmental effects.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

## SubProjects

SubProject Number: 40000135

SubProject Title: Minor Works - Infrastructure Preservation - Medium Volt Improve

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Infrastructure renewal and preservation is a top priority for central utility distribution facilities like Eastern Washington University. Since all building receive their electricity from this infrastructure, they cannot operate without an effective and efficient systems of distribution, control, and automation. The condition of these primary system is reviewed and reported regularly by Eastern staff and paid expert consultants. This collaboration is used to define and request legislative funding that keeps the campus operation, response to energy conservation and sustainability and brings the university infrastructure into compliance with local jurisdiction-having-authority and regulatory agencies. Facilities is responsible for the health, safety, security, and comfort of all that use the campus on a day-to-day basis.

The projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will replace a portion of the 27 existing sub-grade medium voltage switches in a phased approach based on funding available. This schedule has been developed by our electrical engineering consultants. The final number of switch replacements per phase will be determined based on allocated funding and replacement costs. It is intended to complete each phase within the biennium each is funded under.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Most all the 27 switches were originally installed in 1989 making them approximately 30 years old. The expected useful life of the type of switches we have (13,200 KVA Medium Voltage Vacuum circuit breaker type) is between 15 and 20 years old. Even under optimal conditions and regular maintenance this equipment has exceeded its useful life and imminent failures should begin to be expected.

Another complicating issue is the switch locations themselves. Originally built to code within the confines of the campus tunnel system they now violate several codes related to electrical safety, access, and fire and life-safety. Being within the tunnel system the environment is wet, surrounded by several clearance restrictions and create an un-safe working

environment when electrical work requires switching.

Lastly, the material makeup of the switches creates an environmental concern. This type of switch was constructed using sulfur hexafluoride (SF6) as the insulating gas which is known to be a potent greenhouse gas. The stability of the gases in these switches is unknown and cannot be accurately determined.

By not taking action with replacement of these switches our electrical staff face several dangers as described above, the university faces the potential consequence of an unplanned electrical outage, including the increased costs of related to an unplanned outage which is several times that of this request, and the environment may suffer from an accidental release of SF6 insulating gas into the atmosphere.

The primary goal of these projects in the sustained operations of the campus infrastructure. Better systems and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority. Whether better operations, better sustainable design and construction, better energy cost parameters, lower cost of operations other goals these projects are programmed, designed, and implement to meet university goals of access and high-quality instruction for our students.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

As stated above the university continually reviews, surveys and track costs of these infrastructure systems for renewal and upgrade. These projects are scrutinized by a problem-solving methodology to derive the highest need and best use of resources, each biennium. From there the following alternatives are considered.

**Alternative 1)** Renovation of the entire system- major project renovation. The goal of minor works preservation projects like these are to extend systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – Infrastructure does not allow to take portion of the campus off-line due to the structure and distribution of utilities across the campus. The systems listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Facilities may not be available, systems can become unusable, there may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000135

SubProject Title: Minor Works - Infrastructure Preservation - Medium Volt Improve communities served, etc.

All electrical distribution from out sub-station to each building goes through these switches. If they do not operate appropriately, we have no way to provide power to each facility. This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

Infrastructure renewal projects does not add square footage or new units but replaces and renews existing systems/equipment for continued high quality campus operations.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding— "the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000135

SubProject Title: Minor Works - Infrastructure Preservation - Medium Volt Improve

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### Is there additional information you would like decision makers to know when evaluating this request?

The university infrastructure is the life blood of campus facilities, supplying all utilities from the central plant to each facility on campus. Without high quality systems the outcomes for student can be impacted and the university will not be able to meet its strategic goals.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

Starting Fiscal Year: 2026

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000136

SubProject Title: Minor Works - Infrastructure Preservation - Utility Tunnel Improv

### Project Summary

Minor Works - Infrastructure Preservation - Utility Tunnel Improvements - Eastern Washington University is requesting funds in this category to address aging and deterioration of the campus tunnel infrastructure. This infrastructure system is a key component to utility distribution and overall campus operations.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

The university utility tunnel system was first constructed in the 1960's. Construction of several sections continued through the 1990's, with a recent small extension built in 2018. The tunnels are the primary means of distributing steam for heating, chilled water for cooling and other utilities to the 70 buildings on campus. Little to no maintenance or repair has been performed in the tunnel system. At several locations the long-term effects of a rough service life and harsh environmental conditions (large temperature swings, groundwater seepage into the tunnel, age, etc.) have left some areas and systems in the tunnel deteriorated to the point of failure. Repairs to several structural components, and mechanical and electrical equipment are needed now more than ever.

***Eastern Washington University is requesting \$1,500,000 for upgrades, improvement, and replacement of tunnels on the university Cheney campus in the category of Infrastructure Renewal.***

Residing entirely below grade and out of site by most people the tunnel system has never had any significant maintenance or repair since constructed. An intended secondary use of the tunnels is that the tunnel lids serve as pedestrian sidewalks in several areas across campus. In one area, the original tunnel construction included a couple sets of concrete stairs as part of the tunnel lid. This area with the stairs has experienced high levels of deterioration of the interior of the tunnel lid and are approaching imminent failure. This area also has complex piping systems beneath the stairway which if/when failure occurs will compromise other systems such as heating and cooling and that makes this area is a priority.

In many other areas of the tunnel structural components that hold in place and physically support the various utilities have become highly deteriorated. The integrity of the mechanical and electrical systems residing in the tunnel have slowly begun to be compromised by this degradation.

Eastern's facilities are complex and costly resources to maintain and operate; these minor works infrastructure renewal projects enable us to defer major capital expenditures through creative preservation measures to extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state.

### Safety issues:

The existing tunnel system is approximately 2.5 miles long and is legally defined as a "confined space". The tunnel contains miles of piping which deliver steam, chilled water, and electricity to the 70 plus buildings on campus. The tunnel also contains several stations, or locations rather, where various pieces of equipment related to the distribution processes of each utility reside. The tunnel is equipped with lighting throughout most of the complex. Unfortunately, most of the equipment described is from the original construction of the tunnel and time has taken a toll on the equipment.

For instance, much of the tunnel lighting system has failed over time. Numerous individual fluorescent light fixtures have rusted out and are a safety hazard with respect to proper grounding of the fixture. Additionally, many of the fixtures no longer

# 370 - Eastern Washington University Capital Project Request

## SubProjects

SubProject Number: 40000136

SubProject Title: Minor Works - Infrastructure Preservation - Utility Tunnel Improv

operate which creates trip/fall hazards in areas where lighting is critically important.

Another example of a component failure is the support system for the piping network that resides in the tunnel. Typically, piping is carried on a rack that provides structural support for the piping that runs throughout the tunnel. Much of the steel structure of the support is highly rusted and in danger of failure.

### Compliance issues:

Tunnel lighting, and the lack of proper lighting have become a compliance issue. Not acting in the modernization and integration will affect the reliability of maintaining and monitoring older buildings that have not yet been upgraded and will hinder operations and energy management, moreover EWU's commitment to state regulations compliance, campus efficiency and sustainability goals will not have been met.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The tunnels are the primary distribution conduit for most of the campus utility connections to buildings. Since all building receive their utilities from the infrastructure, they cannot operate without an effective and efficient systems of distribution, control, and automation. The condition of tunnel system is reviewed and reported regularly by Eastern staff and paid expert consultants. This collaboration is used to define and request legislative funding that keeps the campus operation and brings the university infrastructure into compliance with local jurisdiction-having-authority and regulatory agencies. Facilities is responsible for the health, safety, security, and comfort of all the use the campus on a day-to-day basis. This includes those who work in the tunnels and walk above them.

This project was developed to address reduction in operation costs, bring systems to current code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the tunnel to support high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will provide for the demolition of the existing tunnel/sidewalk/stairs described above, make repairs to this section,

# 370 - Eastern Washington University Capital Project Request

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000136

SubProject Title: Minor Works - Infrastructure Preservation - Utility Tunnel Improv

and rebuild this area in its current location. This area is an area of moderately high pedestrian traffic. This project will also make repairs to the earlier noted structural, mechanical, and electrical components such as tube steel racking for the utility piping, electrical lighting, and various pumps that evacuate water within the tunnel.

The design component will be minimal and limited to the immediate areas of concern related to the tunnel/sidewalk/stair. The project will begin once funding is approved and completed within the biennium. The university understands that funding will not always be available at the level requested, therefore, we plan for our projects to be dynamic and flexible with the funding that is made available. We will either reduce the scope of a specific project or reduce the facilities being addressed in this request.

There are no predesign studies required for this level of minor works projects. The project will start as soon as the appropriations are approved (approximately July 2023) with the intent of completing the project prior to the end of the biennium (June 2025). All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

This project will eliminate imminent structural failure to a portion of our tunnel/sidewalk system. There is a wealth of visible information suggesting the failure will occur. To what extent and to how drastic, no one currently knows. Maintaining and upgrading these systems is the university's responsibility. The requests addressed as the highest priority issues are currently identified and responded to with upgrades and replacement that respond to specific failures and low performing conditions. There are also regulatory requirements associated with the operations of our systems that we must address on a periodic basis to continue to comply.

The result of not acting will be the eventual structural failure of this area of the tunnel system. Once this failure occurs the university can expect to see failures of the steam/chilled water/electrical distribution systems that sit beneath the tunnel/sidewalk/stairs location. This will require additional funds over and above those currently being requested. There also exists the potential for personal injury depending on how the failure occurs. The probability for injury is likely low but does exist and should be noted/corrected. The existing condition impacts the ability to provide a safe, comfortable, and accessible campus for all that use it.

The primary goal of these projects in the sustained operations of the campus infrastructure. Better systems and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority. Whether better operations, better sustainable design and construction, better energy cost parameters, lower cost of operations other goals these projects are programmed, designed, and implement to meet university goals of access and high-quality instruction for our students.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

As stated above the university continually reviews, surveys and track costs of these systems to building priority projects for renewal and upgrade. These projects are scrutinized by a problem-solving methodology to derive the highest need each biennium. From there the following alternatives are considered.

**Alternative 1)** Renovation of the entire system- major project renovation. The goal of minor works infrastructure renewal

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000136

SubProject Title: Minor Works - Infrastructure Preservation - Utility Tunnel Improv

projects like these are to extend systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – Infrastructure does not allow to take portion of the campus off-line due to the structure and distribution of utilities across the campus. The systems listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Facilities may not be available, systems can become unusable, there may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities. At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time. Given the nature of the noted deficiencies there is no alternative other than “do nothing” which is not considered feasible in this instance, for the tunnel/sidewalk/stair location, or for the many locations within the tunnel where other structural, mechanical, and electrical issues remain.

This direction was chosen because of the safety issue present to the pedestrian public related to the stairs, as well as the potential for interruption of services due to catastrophic failure of one or more of the mechanical, electrical, or structural components failing.

Infrastructure Preservation projects primary goal are to maintain, preserve, and extend the lifecycle of existing state facilities and assets. In most cases the systems and equipment addressed in these requests are at the end, or past the end of their effective lifecycle and need upgrading or replacement. System and equipment failure are not productive alternatives. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the perpetual lack of available resources. The university evaluates all alternatives including deferring the projects to a later date. The analysis is based upon the needs of the university and academic and student-based programs to continue to succeed and meet the goal of our strategic plan. These projects do not have any pre-design associated with their implementation.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

The clientele associated with this request include all university students, faculty, staff, and community members that use our facilities on campus. This is our service area which includes a variety of university and community activities daily. Some projects specifically address certain buildings but, these improvements are a benefit to the campus as a whole and our entire clientele. Because Eastern is a public university our campus also supports the local and region community. As stated

under the problem or opportunity to be addressed, the university core themes are improved, as we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

Infrastructure Preservation provides for the long-term operations of campus facilities through the distribution of Primary Electrical Power, Steam, Chilled Water and Domestic Water.

It is the university's responsibility to be good steward of state resources, to maintain and upgrade these systems in an orderly manner thereby reducing the probability of expensive unplanned outages. The requests addressed as the highest priority issues are currently identified and responded to with upgrades and replacement that respond to specific failures and low performing conditions. There are also regulatory requirements associated with the operations of our systems that we

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000136

SubProject Title: Minor Works - Infrastructure Preservation - Utility Tunnel Improv

must address on a periodic basis to continue to comply with all current codes.

As is the case with reduction of approved funding, the university will prioritize the highest needed project and defer others as required. In many cases there will be an additional burden on our operation budgets.

It is vital to improve upon systems as they age and deteriorate. The cost of maintenance and operations will be less effective and cause a substantial impact on state operating resources for their entire operation. Prioritization and implementation of these types of projects are the best option as they reduce the total replacement costs and defer major capital request by extending the lifecycle of the facility, address deferred maintenance backlog, and help meet the university's sustainability mission and goals, reduce energy costs as well as GHG greenhouse emissions.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000136

SubProject Title: Minor Works - Infrastructure Preservation - Utility Tunnel Improv

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 14

### Project Summary

Minor Works - Infrastructure Preservation - Building Automation/Energy Management Improvements - A high priority for the university is energy management and campus sustainability. Low cost upgrades and improvement to our Building Automation and Energy Management system can have an immediate and positive effect on these issues and contribute to the reduction of carbon footprint for the university on the Cheney Campus.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern Washington University maintains a sophisticated campus wide building automation system (BAS) and energy management systems (EMS). Many buildings on campus are not modernized with the BAS/EMS systems. This project will integrate remaining campus buildings with new innovative BAS/EMS that is current with EWU's campus operating and monitoring system. This priority request for the BAS/EMS integration is to modernize the remaining campus buildings to meet current control strategies and optimize energy management practices and gather utility usage through metering. This will allow university staff to monitor and manage these systems efficiently from a centralized location.

EWU's priority request for the BAS/EMS integration and modernization of remaining campus buildings will certainly employ greater energy efficiency in all aspects of our buildings, improve energy efficiency standards, substantially reduce utility cost, and ultimately fulfil reduction of GHG Green-House gas emissions in support of our sustainability commitment.

The Washington Clean Buildings Act was signed into law during the 2019 legislative session. The act establishes a first-of-its-kind standard that will improve the energy performance of thousands of large commercial buildings while lowering costs and pollution from fossil fuel consumption. EWU's request will bring the campus much closer in compliance of the Clean Buildings Act, energy performance standards and energy use intensity reduction targets. EWU will gain full utility and end-use metering for problem-solving, billing and reporting to the Washington State Department of Commerce for House Bill 1257 monitoring & compliance.

***EWU is requesting \$1,250,000 for this energy performance upgrade in bringing our campus buildings current conditions into compliance with the Washington state requirements in energy efficiency, natural gas preservation use & reduction of GHG green-house gas emissions. Building included in this request are ART, Communications, Digital Media, Music, Theatre, Cadet and Cheney Hall.***

**Operation Budget Savings** – Energy Savings. EWU's priority request for the BAS/EMS integration and modernization of remaining campus buildings will provide, tenant comfort, HVAC and lighting control, utility and end use metering, energy & systems analytics, energy reporting, HVAC optimization, fault detection & diagnosis, predictive maintenance, reporting, measurement & verification of building efficiencies. BAS/EMS deliver greater energy efficiency, lower operating and maintenance costs, better indoor air quality, greater occupant comfort and productivity.

**Problem or Opportunity** - The BAS/EMS integration will modernize operations and management that facilitate EWU's innovative campus operating system.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000137

SubProject Title: Minor Works - Infrastructure Pres. - Building Automation

Not acting in the modernization and integration will affect the reliability of maintaining and monitoring older buildings that have not yet been upgraded and will hinder operations and energy management, moreover EWU's commitment to state regulations compliance, campus efficiency and sustainability goals will not have been met.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

The improvement on Energy Management and Automations systems is a top priority for central utility distribution facilities like Eastern Washington University. Since all building receive their utilities from the infrastructure, they cannot operate without an effective and efficient systems of distribution, control, and automation. The condition of these primary system is reviewed and reported regularly by Eastern staff and paid expert consultants. This collaboration is used to define and request legislative funding that keeps the campus operation, response to energy conservation and sustainability and brings the university infrastructure into compliance with local jurisdiction-having-authority and regulatory agencies.

The projects contained in this request are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This BAS/EMS integration project, if funding is approved with design and construct several projects that will upgrade and renew systems and systems components to meet higher levels of energy conservation and sustainability.

This request will scope design and construction implementation of sophisticated campus wide building automation systems and energy management systems. There are no predesign studies required for this level of minor works projects. The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2025). The areas of construction listed in this request have been prioritized by areas and phase so if the approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000137

SubProject Title: Minor Works - Infrastructure Pres. - Building Automation

undertaken and that information is available for review as necessary.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

The primary goal of these projects in the sustained operations of the campus infrastructure. Better systems and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority. Whether better operations, better sustainable design and construction, better energy cost parameters, lower cost of operations other goals these projects are programmed, designed, and implement to meet university goals of access and high-quality instruction for our students.

As is objectively the case, to not take actions will continue the degradation systems and infrastructure conditions and operations. The costs for operations, including energy costs will continue to increase. Systems and equipment that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university daily operations and student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that could negative impact university offering and operating costs.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

As stated above the university continually reviews, surveys and track costs of these systems to building priority projects for renewal and upgrade. These projects are scrutinized by a problem-solving methodology to derive the highest need each biennium. From there the following alternatives are considered.

**Alternative 1)** Renovation of the entire system- major project renovation. The goal of minor works preservation projects like these are to extend systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – Infrastructure does not allow to take portion of the campus off-line due to the structure and distribution of utilities across the campus. The systems listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Facilities may not be available, systems can become unusable, there may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities. At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000137

SubProject Title: Minor Works - Infrastructure Pres. - Building Automation

Minor works projects this size do not require a predesign study.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase. Infrastructure renewal projects (Building Automation and Energy Management upgrades) do not add square footage or new units but replaces and renews existing systems/equipment for continued high quality campus operations.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associate with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

**Strategic Plan** – core themes are listed above.

#### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding— "the plan must make sense"

#### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

## SubProjects

SubProject Number: 40000137

SubProject Title: Minor Works - Infrastructure Pres. - Building Automation

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

## SubProjects

SubProject Number: 40000137

SubProject Title: Minor Works - Infrastructure Pres. - Building Automation

### Is there additional information you would like decision makers to know when evaluating this request?

It is vital to improve upon systems as they age and deteriorate. The cost of maintenance and operations will be less effective and cause a substantial impact on state operating resources for their entire operation. Prioritization and implementation of these types of projects are the best option as they reduce the total replacement costs and defer major capital request by extending the lifecycle of the facility, address deferred maintenance backlog, and help meet the university's sustainability mission and goals, reduce energy costs as well as GHG greenhouse emissions.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community

Starting Fiscal Year: 2026

Project Class: Preservation

SubProject Title: Minor Works - Infrastructure Preservation - Campus Walkway Improv

pedestrian walkways and other amenities operational and safe for the users of our campus.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

The safety of all people that work, attend class, or visit our campus is the highest priority of the university. The campus has many vehicular and pedestrian routes to help people navigate daily to their various destinations whether it be to classes, offices, gathering spaces or to get to a work location. These routes are constructed of varying materials such as concrete, asphalt, and brick and vary in type from being walkways, access drives, sidewalks, and paths. Most of these routes have been in place for many years, are heavily worn, and do not meet current accessibility and safety codes.

***Eastern Washington University is requesting \$800,000 for upgrades and replacement of campus walkways, sidewalks, access drives and other pedestrian pathways.***

This request has been developed by evaluation existing pedestrian and vehicle pathways on campus. Many are in need of upgrades due to their age and condition. Others need to be revised to meet current safety and Americans with Disabilities (ADA) standards. Compliance and safety issues are continually reviewed for the risk to the individuals using the Cheney campus. The risk to the university due to trips and slips on campus walkways and also any response to potential injury caused by old and deteriorated sidewalks and pathways.

Eastern's facilities are complex and costly resources to maintain and operate; these minor works infrastructure renewal projects enable us to defer major capital expenditures through creative preservation measures to extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. Simply stated, even facilities that are well maintained wear out over time and need major repairs or replacement that require more resources than are available from general maintenance and operations budgets. These areas are part of campus day-to-day needs to support student success and university staff's needs.

#### **Eastern Washington University's Core Themes include:**

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

This project was developed to address reduction in operation costs, bring walkway and service drive components into current

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000138

SubProject Title: Minor Works - Infrastructure Preservation - Campus Walkway Improv

code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the walkways to support high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This project will provide for the demolition of the existing sidewalk, pathways and service drives described above, make repairs to this section, and rebuild this area in its current location. This area is an area of moderately high pedestrian traffic. This project will also make repairs to handrails, curb cuts and other sidewalk amenities that are part of pedestrian traffic flow.

The design component will be minimal and limited to the immediate areas of concern related to the sidewalk/pathways/exterior stairs. The project will begin once funding is approved and completed within the biennium. This request will scope design and construction implementation of sophisticated campus wide building automation systems and energy management systems. There are no predesign studies required for this level of minor works projects. The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

The university understands that funding will not always be available at the level requested, therefore, we plan for our projects to be dynamic and flexible with the funding that is made available. We will either reduce the scope of a specific project or reduce the facilities being addressed in this request.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?** This project will repair or replace those areas of pedestrian and service access drives that need to be repaired or replaced. Areas that have met and, in many cases, exceeded their planned life cycle or need improvements to meet current compliance standards.

The result of not acting will be the eventual failure of these areas. That could and will cause potential injury to campus users and well as the potential damage to maintenance equipment. Continually to use failing and update sidewalk infrastructure will increase university costs of operations, potential tort claims and citations and fines from safety and regulatory agencies.

The primary goal of these projects in the sustained operations of the campus infrastructure. Better systems and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority. Whether better operations, better sustainable design and construction, better energy cost parameters, lower cost of operations other goals these projects are programmed, designed, and implement to meet university goals of access and high-quality instruction for our students.

As is objectively the case, to not take actions will continue the degradation systems and infrastructure conditions and operations. The costs for operations, including energy costs will continue to increase. Systems and equipment that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university daily operations and student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that could negative impact university offering and operating costs.

SubProject Title: Minor Works - Infrastructure Preservation - Campus Walkway Improv

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

As stated above the university continually reviews, surveys and track costs of these systems to building priority projects for renewal and upgrade. These projects are scrutinized by a problem-solving methodology to derive the highest need each biennium. From there the following alternatives are considered.

**Alternative 1)** Renovation of the entire system- major project renovation. The goal of minor works infrastructure renewal projects like these are to extend systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – Infrastructure does not allow to take portion of the campus off-line due to the structure and distribution of utilities across the campus. The systems listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures is not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Facilities may not be available, systems can become unusable, there may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities. At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time. Given the nature of the noted deficiencies there is no alternative other than “do nothing” which is not considered feasible in this instance, for the tunnel/sidewalk/stair location, or for the many locations within the tunnel where other structural, mechanical, and electrical issues remain. This direction was chosen because of the safety issue present to the pedestrian public related to the walkways, exterior stairs, service drives and other pedestrian amenities.

Infrastructure Preservation projects primary goal are to maintain, preserve, and extend the lifecycle of existing state facilities and assets. In most cases the systems and equipment addressed in these requests are at the end, or past the end of their effective lifecycle and need upgrading or replacement. System and equipment failure are not productive alternatives. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the perpetual lack of available resources. The university evaluates all alternatives including deferring the projects to a later date. The analysis is based upon the needs of the university and academic and student-based programs to continue to succeed and meet the goal of our strategic plan.

These projects do not have any predesign associated with their implementation.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:34PM

Project Number: 40000118

Project Title: 2023 - 2025 Minor Works - Infrastructure Preservation

## SubProjects

SubProject Number: 40000138

SubProject Title: Minor Works - Infrastructure Preservation - Campus Walkway Improv

The clientele associated with this request include all university students, faculty, staff, and community members that use our facilities on campus. This is our service area which includes a variety of university and community activities daily. Some projects specifically address certain buildings but, these improvements are a benefit to the campus as a whole and our entire clientele. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase. Infrastructure renewal projects, sidewalks and pathway improvements, do not add square footage or new units but replaces and renews existing systems/equipment for continued high quality campus operations.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding— "the plan must make sense"

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy**

SubProject Title: Minor Works - Infrastructure Preservation - Campus Walkway Improv  
184 for definition.)

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > Americans with Disabilities Act - 2010 Building Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request? It is the university's**

responsibility to be good steward of state resources, to provide safe state facilities, to maintain and upgrade systems in an orderly manner thereby reducing the probability of injury and expensive unplanned outages. The requests addressed as the highest priority issues are currently identified and responded to with upgrades and replacement that respond to specific failures and low performing conditions. There are also regulatory requirements associated with the operations of our systems that we must address on a periodic basis to continue to comply with all current codes. As is the case with reduction of approved funding, the university will prioritize the highest needed project and defer others as required. In many cases there will be an additional burden on our operation budgets.

It is vital to improve upon pedestrian sidewalks, service drives and other pathways, as they age and deteriorate. The cost of maintenance and operations will be less effective and cause a substantial impact on state operating resources for their entire operation. Prioritization and implementation of these types of projects are the best option as they reduce the total replacement costs and defer major capital request by extending the lifecycle of the facility, address deferred maintenance backlog, and help meet the university's sustainability mission and goals, reduce energy costs as well as GHG greenhouse emissions.

Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## Description

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 17

### Project Summary

Preventative Maintenance/Backlog Reduction projects allow for the university to apply funding to components and systems to lengthen life cycles, reduce maintenance and operations costs, implement energy saving upgrades and replacements improve the campus sustainability and reduce our carbon footprint.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern's facilities are complex and costly resources to maintain and operate. These minor works backlog reduction projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the improvement and maintenance needs of our facilities and arranged for these projects to be completed within one renovation or improvement phase.

The results of these identified projects will be:

- Reduction of backlog maintenance
- Reduction of operating cost including the cost of utilities to operate
- Replacement of obsolete equipment with new and higher efficiency equipment and systems
- Improved operations and indoor air quality and health safety related operations
- Reduction in costs associated with building cleaning
- Higher level of comfort for building customers and improved environment for teaching and student learning.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Facilities preservation projects contained in this request are developed and designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## Description

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will address high priority maintenance issues that are of high cost and critical need on the campus. These projects are developed to address campus wide facilities deterioration and operational failure due to lack of funding for normal operational maintenance on buildings and building systems. Projects include all facilities preservation and infrastructure preservation projects. These projects were identified through evaluation of our current systems by engineering consultants, regulatory agencies and plant staff. We captured the costs to maintain and operate the existing structures through our computerized maintenance management systems (CMMS). This work is specifically listed as repairs and replacements that cannot be completed due to lack of manpower or lack of operational resources.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phased, so the if approved funding is less than requested, a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

These projects reduce total replacement costs and defer major capital requests over a longer period of time. Implementing these projects extends the overall lifecycle of our facilities and aligns with our university's mission and goals by managing our maintenance backlog and reducing cost.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic and costly failures. Minor projects reduce the frequency of emergencies and cost less on a long-term basis.

Unfortunately, the results of not taking any action would be that deferred maintenance would increase and related operation cost would also increase. The potential for high-cost catastrophic failures of system and equipment could mean emergency repairs and replacement would be necessary impacting campus operation having higher costs than the planned improvements or replacements. To not take actions will continue the degradation of systems and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university students and staff. Catastrophic failure is more costly than planned upgrades and improvement. Strategic planning for upgrades, improvements and replacements can avoid many problems that negatively impact university offerings and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Backlog reduction and preservation projects main goal are to maintain preserve and extend the lifecycle of existing state facilities and assist. In most cases the systems and equipment addressed in these requests are at the end or past then end of their lifecycle and are in need of upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goal of our strategic plan.

## 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

### Description

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the students on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University strategic core themes are listed above.

#### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## Description

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

The projects included here affect many other state programs such as sustainability and cost-effective facilities management. These projects extend the lifecycle of our buildings' systems and respond to the normal life cycle deterioration that progress in all facilities.

EWU expands opportunities for personal transformation through excellence in learning through; enhancing access to higher education in the Inland Northwest and beyond and supporting traditional college-bound students and those from under-served populations; Delivering high quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning and Promoting student success by supporting student engagement and timely degree completion.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## Description

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > Americans with Disabilities Act (ADA) - 2010 Design Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

### **How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### **Is there additional information you would like decision makers to know when evaluating this request?**

High quality facilities are "key" to positive student outcomes. These projects reduce total replacement costs and defer major capital requests over a longer period of time. Implementing these projects extends the overall lifecycle of our facilities and aligns with our university's mission and goals by managing our maintenance backlog and reducing cost. Good planning, system renewal and minor capital improvements allow for long term reduction of operating costs, reduction of emergency or catastrophic failures and extend the lifecycle of mission critical systems for the university.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic and costly failures. Minor projects reduce the frequency of emergencies and cost less on a long-term basis. Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and

## Description

reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state’s premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern’s facilities are in integral part of our education mission and the quality of these spaces directly enhance the student experience and subsequently their personal and professional success. Eastern’s curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates and building community.

## SubProjects

SubProject Number: 40000121

SubProject Title: Preventative Maintenance/Backlog Reduction

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 17

### Project Summary

Preventative Maintenance 2025-2027 Phase I - Preventative Maintenance/Backlog Reduction projects allow for the university to apply funding to components and systems to lengthen life cycles, reduce maintenance and operations costs, implement energy saving upgrades and replacements improve the campus sustainability and reduce our carbon footprint.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern's facilities are complex and costly resources to maintain and operate. These minor works backlog reduction projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the improvement and maintenance needs of our facilities and arranged for these projects to be completed within one renovation or improvement phase.

The results of these identified projects will be:

- Reduction of backlog maintenance
- Reduction of operating cost including the cost of utilities to operate
- Replacement of obsolete equipment with new and higher efficiency equipment and systems
- Improved operations and indoor air quality and health safety related operations
- Reduction in costs associated with building cleaning
- Higher level of comfort for building customers and improved environment for teaching and student learning.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Facilities preservation projects contained in this request are developed and designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and

## SubProjects

SubProject Number: 40000121

SubProject Title: Preventative Maintenance/Backlog Reduction

improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will address high priority maintenance issues that are of high cost and critical need on the campus. These projects are developed to address campus wide facilities deterioration and operational failure due to lack of funding for normal operational maintenance on buildings and building systems. Projects include all facilities preservation and infrastructure preservation projects. These projects were identified through evaluation of our current systems by engineering consultants, regulatory agencies and plant staff. We captured the costs to maintain and operate the existing structures through our computerized maintenance management systems (CMMS). This work is specifically listed as repairs and replacements that cannot be completed due to lack of manpower or lack of operational resources.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phased, so the if approved funding is less than requested, a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

These projects reduce total replacement costs and defer major capital requests over a longer period of time. Implementing these projects extends the overall lifecycle of our facilities and aligns with our university's mission and goals by managing our maintenance backlog and reducing cost.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic and costly failures. Minor projects reduce the frequency of emergencies and cost less on a long-term basis.

Unfortunately, the results of not taking any action would be that deferred maintenance would increase and related operation cost would also increase. The potential for high-cost catastrophic failures of system and equipment could mean emergency repairs and replacement would be necessary impacting campus operation having higher costs the planned improvements or replacements. To not take actions will continue the degradation of systems and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university students and staff. Catastrophic failure is more costly than planned upgrades and improvement. Strategic planning for upgrades, improvements and replacements can avoid many problems that negatively impact university offerings and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Backlog reduction and preservation projects main goal are to maintain preserve and extend the lifecycle of existing state facilities and assist. In most cases the systems and equipment addressed in these requests are at the end or past then end

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## SubProjects

SubProject Number: 40000121

SubProject Title: Preventative Maintenance/Backlog Reduction

of their lifecycle and are in need of upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goal of our strategic plan.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the students on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University strategic core themes are listed above.

Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### *We drive innovation*

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

### *We transform our Region*

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's facilities are in integral part of our education mission and the quality of these spaces directly enhance the student experience and subsequently their personal and professional success. Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving graduation rates and building community.

SubProject Number: 40000122

SubProject Title: 2023 - 2025 - Preventative Maintenance/Backlog Reduction Phase II

Starting Fiscal Year: 2026

Project Class: Preservation

Agency Priority: 17

### Project Summary

Preventative Maintenance 2025-2027 Phase II - Preventative Maintenance/Backlog Reduction projects allow for the university to apply funding to components and systems to lengthen life cycles, reduce maintenance and operations costs, implement energy saving upgrades and replacements improve the campus sustainability and reduce our carbon footprint.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern's facilities are complex and costly resources to maintain and operate. These minor works backlog reduction projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the improvement and maintenance needs of our facilities and arranged for these projects to be completed within one renovation or improvement phase.

The results of these identified projects will be:

- Reduction of backlog maintenance
- Reduction of operating cost including the cost of utilities to operate
- Replacement of obsolete equipment with new and higher efficiency equipment and systems
- Improved operations and indoor air quality and health safety related operations
- Reduction in costs associated with building cleaning
- Higher level of comfort for building customers and improved environment for teaching and student learning.

### Eastern Washington University's Core Themes include:

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Facilities preservation projects contained in this request are developed and designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and

SubProject Title: 2023 - 2025 - Preventative Maintenance/Backlog Reduction Phase II

improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will address high priority maintenance issues that are of high cost and critical need on the campus. These projects are developed to address campus wide facilities deterioration and operational failure due to lack of funding for normal operational maintenance on buildings and building systems. Projects include all facilities preservation and infrastructure preservation projects. These projects were identified through evaluation of our current systems by engineering consultants, regulatory agencies and plant staff. We captured the costs to maintain and operate the existing structures through our computerized maintenance management systems (CMMS). This work is specifically listed as repairs and replacements that cannot be completed due to lack of manpower or lack of operational resources.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phased, so the if approved funding is less than requested, a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

These projects reduce total replacement costs and defer major capital requests over a longer period of time. Implementing these projects extends the overall lifecycle of our facilities and aligns with our university's mission and goals by managing our maintenance backlog and reducing cost.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic and costly failures. Minor projects reduce the frequency of emergencies and cost less on a long-term basis.

Unfortunately, the results of not taking any action would be that deferred maintenance would increase and related operation cost would also increase. The potential for high-cost catastrophic failures of system and equipment could mean emergency repairs and replacement would be necessary impacting campus operation having higher costs than the planned improvements or replacements. To not take actions will continue the degradation of systems and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university students and staff. Catastrophic failure is more costly than planned upgrades and improvement. Strategic planning for upgrades, improvements and replacements can avoid many problems that negatively impact university offerings and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Backlog reduction and preservation projects main goal are to maintain preserve and extend the lifecycle of existing state facilities and assist. In most cases the systems and equipment addressed in these requests are at the end or past then end

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## SubProjects

SubProject Number: 40000122

SubProject Title: 2023 - 2025 - Preventative Maintenance/Backlog Reduction Phase II

of their lifecycle and are in need of upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goal of our strategic plan.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative 5 is the best-case scenario to balance high costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the students on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University strategic core themes are listed above.

Date Run: 9/10/2024 12:35PM

Project Number: 40000134

Project Title: Preventative Maintenance/Backlog Reduction

## SubProjects

SubProject Number: 40000122

SubProject Title: 2023 - 2025 - Preventative Maintenance/Backlog Reduction Phase II

### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

The projects included here affect many other state programs such as sustainability and cost-effective facilities management. These projects extend the lifecycle of our buildings’ systems and respond to the normal life cycle deterioration that progress in all facilities.

EWU expands opportunities for personal transformation through excellence in learning through; enhancing access to higher education in the Inland Northwest and beyond and supporting traditional college-bound students and those from under-served populations; Delivering high quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning and Promoting student success by supporting student engagement and timely degree completion.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

SubProject Number: 40000122

SubProject Title: 2023 - 2025 - Preventative Maintenance/Backlog Reduction Phase II

If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

When system or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > Americans with Disabilities Act (ADA) - 2010 Design Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

High quality facilities are "key" to positive student outcomes. These projects reduce total replacement costs and defer major capital requests over a longer period of time. Implementing these projects extends the overall lifecycle of our facilities and aligns with our university's mission and goals by managing our maintenance backlog and reducing cost. Good planning, system renewal and minor capital improvements allow for long term reduction of operating costs, reduction of emergency or catastrophic failures and extend the lifecycle of mission critical systems for the university.

The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical

Minor Works – Program 061 2025-27

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:39PM

Project Number: 40000158

Project Title: Geothermal Plant - Node 1

## Description

Project Phase Title: Design &amp; Construction

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 2

### Project Summary

The Geothermal Plant - Node 1 will create a facility which uses ground source heat pump technology to heat and cool up to 11 buildings on campus, thereby reducing the energy use and carbon emissions to meet the requirements of HB 1390. This project is the center piece for plans to decarbonize the campus, and several other projects depend on this central component to move forward.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

In 2019 the Clean Buildings Performance Standard (CBPS) was established, requiring the Department of Commerce to establish rules for energy performance standards for commercial buildings. Through the reduction of building energy usage, the performance standard seeks to maximize reductions in greenhouse gas emissions from the built environment. The performance standard includes energy use intensity targets by building type, as well as requirements for an energy management plan, operations and maintenance program, energy efficiency audits, and investments in energy efficiency measures. The adoption of HB 1390 for campuses utilizing district heating and cooling systems, such as Eastern Washington University, created a pathway for even greater reductions in greenhouse gas emissions by focusing on phasing out the use of fossil fuels to generate steam for campus wide heating.

Opportunity - To reduce greenhouse gas emissions, reduce building Energy Use Intensity (EUI), comply with HB 1390 and (CBPS), support the EWU decarbonization plan (currently being drafted), and to reduce the overall campus energy and operating costs.

Priority – The Geothermal Plant – Node 1 is the center piece to EWU's decarbonization plan and is vital to the success of other planned projects, including the Martin-Williamson renovation which is being submitted as a separate capital budget request in this biennium. Supported and justified by multiple studies noted below, this technology was found to be the most effective approach in addressing decarbonization and energy use for the University. Other supporting studies, attached to this request or submitted separately in EWU's 25/27 budget request, include: Ground Source Heat Pump Feasibility Study, EWU Hydrogeologic Evaluation, Martin-Williamson Predesign, Civil Engineering Building – Applied Engineering Predesign, Lucy Covington Center Predesign, EWU Decarbonization Plan, and Energy Audits for existing buildings proposed to be connected to the Geothermal Plant (study underway).

Underserved people / communities – Eastern Washington University continues to provide opportunities for underserved and diverse populations. More than 1 in 3 students are from diverse backgrounds, 44% are the first in their family to attend college, and Eastern offers one of the most affordable and accessible educations from a 4-year university. In addition, it is well documented that climate change impacts underserved and low-income communities the hardest of all. This project will support underserved populations locally and on a long-term basis globally by lessening the impacts of human caused climate change.

Operating budget savings – This project will help to reduce operating costs for the multiple buildings that are eventually connected. See attached studies for more in-depth analysis and how this project is related to other proposed projects on campus.

Public safety improvements – It will serve to improve the safety and longevity of the existing buildings, and more importantly help to reduce the long-term impacts of climate change. This region is experiencing records setting temperatures and more intense wildfires year after year, including an evacuation notice due to local fires in 2023. If meaningful steps aren't taken to curb the impacts of climate change, conditions will continue to worsen for future generations.

Clarifying details – In summary, this project is part of a larger initiative to reduce energy use and carbon emissions on the campus by transitioning from burning fossil fuels (natural gas) to ground source heat pump technology (electric). As the

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:39PM

Project Number: 40000158

Project Title: Geothermal Plant - Node 1

## Description

newGeothermal Plant – Node 1 comes on-line, multiple buildings will connect to andbenefit from one of the most efficient energy sources for this climate.

Current condition of the facility / system – The current steamplant is fortunately in good operating condition and it will be used in tandem formany years as the transition to electricity occurs for more of the campus. It will also serve as a backup system for built-inredundancy while new technology is tested and implemented.

**What will the request produce or construct(predesign/design of a building, additional space, etc.)? When will the projectstart/end? Identify if the project can be phased, and if so, which phase isincluded in the request. Provide detailec cost backup.**

This project will entail design and construction of an openloop ground source heat pump plant that will be sized to serve up to 11 existingand new buildings on campus (approximately 500,000 sf). See reports attached to this request. It will extract water from the aquifer, passit through a heat exchanger, and then return the water through injectionwells. No ground water will be consumedin the process.

Design is anticipated to begin in Sept. 2025, constructionwould begin in Nov. 2026, and substantial completion would be anticipated in2027.

While the main plant and a number of the initial wells willneed to be constructed in one phase, additional wells could be brought on-lineas campus buildings are connected. Thedrilling of a test well will help to determine a final design and provide moreinformation about potential phasing. Thetest well is tentatively scheduled to be drilled in the spring of 2025, aheadof funding for this project.

**How would the request address the problem or opportunityidentified in question 1? What would be the result of not taking action?**

Not taking action would result in the continued use of aless efficient heating & cooling systems, higher operating and maintenancecosts of an aging components, not complying with state legislation thatrequires public institutions to reduce energy use and carbon emissions, potentialfines for not complying with the state and federal energy performance standards(anticipated by 2027), requiring increased future costs due to constructionescalation, and contributing to continuing and increasing impacts of climatechange – both locally and globally.

If approved, this request would directly contribute to therequirement of meeting increasing energy efficiency performance standards andreducing greenhouse gas emissions to levels established by the State of WA,Dept. of Commerce, and Dept. of Ecology. It would also move EWU closer to meeting the University's long-termplanning and sustainability goals.

**What alternatives were explored? Why was the recommendedalternative chosen? Be prepared to provide detailed cost backup. If thisproject has an associated predesign, please summarize the alternatives thepredesign considered.**

In the attached and related reports, systems other thangeothermal ground source heat pumps were explored. Alternate systems evaluated include 1) existingsystem - gas fired boilers to produce steam, 2) using renewable natural gas tofuel existing boilers, and 3) VRF – Variable Refrigerant Flow systems that useair to air heat pump technology. Moredetail can be found in the reports, but to summarize the findings for eachsystem:

1) Existing gas fired boilers – This system would result inno changes, no added upfront costs, and it would not address any of theproblems or meet state energy use requirements.

2) Using renewable natural gas instead of more commonlyavailable utility provided natural gas – While possible in theory, thisresource is not feasible or affordable in the quantity required to heat thecampus. If the renewable gas wereavailable, current pricing would be approximately (10) times the currentutility rate costs.

3) Switching individual buildings to VRF systems – Thissystem could be used to heat and cool buildings, however it increasesmaintenance and operations costs substantially, components would be completelydecentralized and less energy efficient, it would require area increases ineach of the buildings to house additional equipment, air to air heat pumps canbe problematic during the colder months in the eastern Washington climate, andmechanical equipment has a much shorter lifespan.

The recommendation of geothermal ground source heat pumpswas chosen because it was the most effective system to address the problems ona long-term basis, it would allow the most reuse of existing campusinfrastructure, it is the most energy efficient and would result in the largestdecrease of carbon emissions, it would require the least amount of ongoingmaintenance, and it would provide the most opportunity to incorporate intoacademic programs (Mechanical

Date Run: 9/10/2024 12:39PM

Project Number: 40000158

Project Title: Geothermal Plant - Node 1

## Description

Engineering, Electrical Engineering, Sustainability, etc.) to leverage student learning opportunities and increase public awareness and acceptance of sustainability.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

The largest impact would be on the University maintenance staff. Replacing aging equipment would lessen initial maintenance costs at each of the individual buildings, however these savings would be traded for related effort to operate the Geothermal Plant – Node 1. Overall, there would be a need to add some maintenance and operation staff for the new central plant.

Students and faculty would be served by this project through the incorporation of the facility and technology into academic programs.

The community would be served on an individual level by the awareness raised from the project and on a larger scale by the reduction in energy use and climate related impacts.

### Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.

There may be opportunities to apply available federal energy incentives to this project, however that will not be fully known until the system has been designed and communicated to those potential sources of funding.

### Describe how this project supports the agency's strategic master plan or would improve agency performance.

#### Reference feasibility studies, master plans, space programming and other analyses as appropriate.

This project will support the University's strategic plan, comprehensive campus master plan (in progress), climate action plan, decarbonization plan (in progress), and the various studies, reports, and pre-designs that have been mentioned above or are attached for reference. Ultimately, this will reduce the University's energy use, carbon emissions, and operating costs, while supporting the mission, values, and long-term plans for EWU.

### Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.

IT related cost development will be detailed and quantified in the design phase. Final, updated costs will be refined further in design.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.

NA

### How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?

As mentioned, this project is a result of and directly contributes to the statewide goals mentioned above with the sole purpose of reducing greenhouse gas emissions, energy use, and to improve building energy performance. See attached studies and reports for specific details and anticipated results. Final results will be determined when the project is fully designed and incrementally introduced to the campus system.

### How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?

Being a state-owned facility, this project would help by reducing costs related to energy use, building operation, and maintenance. It would also help the state meet mandated energy goals and serve as an example of responsible use of state

Project Number: 40000158

Project Title: Geothermal Plant - Node 1

## Description

funds. Positive impacts and savings will be compounded as the cost of energy and more importantly the impacts of climate change continue to escalate locally, regionally, and globally.

The project directly serves the EWU campus and students and will be leveraged to support current academic programs and learning opportunities.

Local and state economic impacts will be realized by the engineering and construction industries that will be positively impacted through the creation of jobs and the growth of technologies related to sustainability and energy efficiency.

**Is there additional information you would like decisionmakers to know when evaluating this request?**

This project is the result and one component of a comprehensive effort to research, plan, and implement options for the most effective, economically viable, and technologically feasible way to achieve the energy performance goals of the state while meeting the mission and values of Eastern Washington University. It is directly linked to the other project requests and would need to be constructed prior to some of the other projects seeking funding.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay and has been included on the attached Direct Pay Form

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

NA

**Location**

City: Cheney

County: Spokane

Legislative District: 009

**Project Type**

Infrastructure (Major Projects)

**Growth Management impacts**

None - Work done on existing EWU campus

**New Facility:** Yes

**How does this fit in master plan**

It is a key component of reducing energy use, carbon emissions, and energy costs for the campus. It also directly relates to various sustainability initiatives that have been completed or are underway.

### Availability of Space/Campus Utilization Template

Project name: Geothermal Plant - Node 1

CBS/OFM Project #: 40000158

Institution: Eastern Washington University

Category: Infrastructure

Campus/Location: Cheney, WA

**Enrollment**

|  |   |
|--|---|
| 2023 fall on-campus student FTE: <span style="border: 1px solid black; padding: 2px;">8,680</span> | Expected 2024 fall on-campus student FTE: <span style="border: 1px solid black; padding: 2px;">8,246</span> |
|  | % increase budgeted: <span style="border: 1px solid black; padding: 2px;">-5.00%</span>                     |

Enter the average number of hours per week each for (a) classroom seat and (b) classroom lab is expected to be utilized in Fall 2024 for the campus where the project is located.

| (a) General University Classroom Utilization |            | (b) General University Lab Utilization     |             |
|--|------------|--|-------------|
| Fall 2023 Weekly Contact Hours               | 60,425     | Fall 2023 Weekly Contact Hours             | 11,565      |
| Multiply by % FTE Increase Budgeted          | -5.00%     | Multiply by % FTE Increase Budgeted        | -5.00%      |
| Expected Fall 2024 Contact Hours             | 57,404     | Expected Fall 2024 Contact Hours           | 10,987      |
| Expected Fall 2024 Classroom Seats           | 6,415      | Expected Fall 2024 Class Lab Seats         | 996         |
| <b>Expected Hours per Week Utilization</b>   | <b>8.9</b> | <b>Expected Hours per Week Utilization</b> | <b>11.0</b> |
| HECB utilization standard (hours/GUC seat)   | 22.0       | HECB utilization standard (hour/GUL seat)  | 16.0        |
| Difference in utilization standard           | -59.3%     | Difference in utilization standard         | -31.1%      |

If the campus does not meet the 22 hours per classroom seat and/or the 16 hours per class lab HECB utilization standards, describe any institutional plans for achieving the utilization standard.

Eastern Washinton University finds itself in a similar situation as so many other Universities around the nation in a post-pandemic environment. During this time while the focus needs to remain on increasing enrollment, it is vitally important to invest in current facilities so that they continue to serve students, do not fall into disrepair, and are designed to meet future demands, technologies, and teaching pedagogies. In order to achieve this, EWU has embarked on a number of studies to best determine future actions which may range from strategic investment in facilities and/or contracting in others. Some of that work is summarized below.

SRA - In 2022, the University began a Strategic Resource Allocation (SRA) process which entailed a systematic, collaborative, and transparent process to examine the ways resources are being invested. As a regional comprehensive university, it is EWU’s goal to ensure that academic programs are best aligned to meet regional workforce needs, and university services aligned in such a manner as to ensure the student experience is meaningful and campus resources are efficient, effective, and sustainable. The process culminated in 2024 and measures are being put into place to make the University as efficient as possible, including physical improvements, consolidation, and/or reductions where facilities are no longer effectively serving the University.

Strategic Planning – Eastern Washington University is in the process of a Strategic Planning effort to guide the direction and growth of Eastern Washington University. By systematically assessing strengths, weaknesses, opportunities, and threats, EWU will articulate a clear vision for the future and establish well-defined goals. This process enables the University to align its resources, expertise, research endeavors, and educational programs effectively.

CCMP – EWU has just started the process to develop a Comprehensive Campus Master Plan (CCMP) to replace the previous plan that was completed in 2014. Recognizing the unique character, current physical and financial conditions, program and space needs, and growth during the past 10 years and projected into the future, the CCMP will be a guiding document to inform decisions for the next 10 years regarding development, growth, consolidation, etc. This document will include and be informed by numerous other studies that are recently completed or underway: SRA, Strategic Plan, Decarbonization Plan, Climate Resiliency and Sustainability, CCMP, Geothermal Studies, Housing Plan, Currently Planned Construction and Renovation Projects, and Predesign Studies.

MACC from C-100:  unescalated

|                                     | Expected MACC/GSF in 2019 | Expected MACC/GSF | GSF by type | Expected MACC |
|-------------------------------------|---------------------------|-------------------|-------------|---------------|
| Classrooms                          | \$405                     | \$608             | -           | \$0           |
| Instructional labs                  | \$397                     | \$596             | -           | \$0           |
| Research labs                       | \$545                     | \$818             | -           | \$0           |
| Administration                      | \$406                     | \$610             | -           | \$0           |
| Libraries                           | \$340                     | \$510             | -           | \$0           |
| Athletic                            | \$385                     | \$578             | -           | \$0           |
| Assembly, exhibit and meeting rooms | \$428                     | \$643             | -           | \$0           |
|                                     |                           |                   | 5,500       | \$0           |

C-100 to expected MACC variance:

NOTE: The above categories are not applicable to this project since it is infrastructure space that is not regularly occupied. The building is expected to be 5,500 GSF.

**Efficiency of space allocation.** For each major function in the proposed facility (classroom, instructional labs, offices), identify whether space allocations will be consistent with the Facility Evaluation and Planning Guide (FEPG) assignable square feet standards. If any proposed allocations exceed FEPG standards, explain the alternative standard that has been used and why.

**Example: efficiency of space allocation – FEPG standard**

| FEPG room classification number | FEPG room classification type | Project ASF per station | FEPG standard | Meets standard (Y/N) | Comments |
|---------------------------------|-------------------------------|-------------------------|---------------|----------------------|----------|
| n/a                             | n/a                           | n/a                     | n/a           | n/a                  |          |

Identify the (a) assignable square feet in the proposed facility; (b) the gross square feet; and (c) the net building efficiency (“a” divided by “b”).

|  |
|--|
| $0 \text{ ASF} / 5,500 \text{ GSF} = 0\% \text{ Net Efficiency}$ |
|--|

**NOTE:** This chart is not applicable to this project. This facility has no assignable square footage as it is a building designed strictly for equipment with no regularly occupiable interior space for students, faculty, or administration and as such does not match any of the classifications in the Facility Evaluation Planning Guide (FEPG) for assignable square feet. It will occasionally be occupied by facilities personnel who will be servicing the equipment and intermittently for educational tours.

**Instructions:**

Provide the facility's condition score (1 superior – 5 marginal functionality) from the 2016 Comparable Framework study, and summarize the major structural and systems conditions that resulted in that score. Provide selected supporting documentation in appendix, and reference them in the body of the proposal.

**Narrative Response:**

NA

**Instructions:**

Identify the estimated number of additional FTE students the project is expected to enable the institution to serve when the space is fully occupied. Describe the method by which additional FTEs are calculated, including an analysis of probable student enrollment demand from project completion to full occupancy. Also provide an estimate of the number of additional FTE enrollments in high-demand fields and the fields in which such growth is expected to occur.

Per RCW 43.88D.010(1)(a), growth projects must also demonstrate that they can more cost- effectively provide enrollment access than alternatives such as university centers and distance learning.

**Narrative Response:**

NA

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:40PM

Project Number: 40000157

Project Title: Dental Therapy Lab and Clinic

## Description

Project Phase Title: Design &amp; Construction

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 3

### Project Summary

Eastern Washington University requests funding to relocate the EWU Dental Hygiene Clinic to a new facility adjacent to the University of Washington/EWU Regional Initiatives in Dental Education (RIDE) program. EWU is planning to launch a new graduate-level Dental Therapy program which will require expanded use of the existing Dental Hygiene Clinic. Relocating EWU's Dental Hygiene Clinic to available space in a building adjacent to the UW/EWU RIDE program will strengthen natural programmatic and collaborative opportunities and result in shared infrastructure and operational support. With the planned addition of Dental Therapy, this proposal presents a unique opportunity to create the only dental education cluster in the state that brings together baccalaureate, masters, and doctoral-level dental training in shared facilities.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

Eastern Washington University (EWU) is requesting budget authority to enhance the interprofessional training between the University of Washington's School of Dentistry Regional Initiatives in Dental Education (RIDE) program, the EWU Dental Hygiene program, and an EWU Dental Therapy program proposed in the current state biennium budget. This proposal would create a unique opportunity to create the only Dental education cluster in the state that brings together Baccalaureate, Masters, and Doctorate level dental training.

To support this initiative, we are requesting budget authority to relocate the EWU Dental Hygiene clinic to be next to the UW RIDE program. Relocating EWU's Dental Hygiene program to available space in a building adjacent to the UW RIDE program will strengthen natural programmatic and collaborative opportunities and result in shared infrastructure support. The partnership between the UWRIDE and EWU provides a unique integrated resource to strengthen high quality dental care in an interprofessional clinic on the east side of the State. Our proposal will bring further unique training opportunities by locating the dental hygiene clinic in the same building as EWU's School of Nursing and adjacent to the UW/Gonzaga School of Medicine, creating a single, comprehensive intercollegiate and interprofessional health education cluster. With this package, we can make a profound impact on the education of dental and medical professionals.

**What will the request produce or construct (predesign/design of abuilding, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

This project will result in the relocation of dental students to a new facility adjacent to the (RIDE) program. It would include new teaching stations, dental equipment, and the necessary infrastructure and tenant improvements to create teaching space that would be leased from the existing building owner.

Design work would anticipate beginning in August of 2025 through February of 2026. Construction would then start in March of 2026 and finish in December of 2026.

It would not be feasible to phase this project due to the nature of the sensitive equipment, the scale and scope of the work, and the desire for all of the students to begin at one time.

See attached C-100 cost information.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

The current EWU Dental Hygiene clinic is approximately one mile from the UW Dental School and the RIDE Simulation lab. The physical separation of the UW Dental Hygiene clinic and the RIDE Dental Simulation lab is a barrier for RIDE students, Dental Hygiene students, and Dental Therapy students and faculty. Moving the EWU Dental Hygiene clinic to be

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:40PM

Project Number: 40000157

Project Title: Dental Therapy Lab and Clinic

## Description

adjacent to the RIDE facilities will allow Dental Hygiene and Dental Therapy to collaborate with RIDE for content experts. The Dental Hygiene and Dental Therapy programs will share the new clinical space and simulation classroom spaces with the RIDE program. Finally, the relocation of the Dental Hygiene clinic to be adjacent to the EWU School of Nursing will allow interprofessional education with Nursing students, including training in the School of Nursing's new state-of-the-art simulation labs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The recent expansion and relocation of the RIDE program and the proposed expansion of EWU's programs to include Dental Therapy are driving the need to relocate EWU's Dental Hygiene clinic. The current Dental Hygiene clinic is located in a space leased from Washington State University (WSU). With further expansion of WSU's Ellison S. Floyd School of Medicine and associated programs, further expansion of EWU's Dental programs are not possible in the WSU buildings.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

21.8% of Spokane County residents in 2023 received Medicaid and is recognized as a Dental Health Professional Shortage Area for low income homeless populations. The Greater Spokane region has Federally Qualified Health Centers that serve community oral health needs, however there is still an unfulfilled need for oral care among the indigent and underinsured population. EWU's Dental Hygiene clinic already serves the region, with the vast majority of their patients receiving dental benefits through Medicaid. EWU's proposed Dental Therapy program will expand the level of care available to these patients. Additionally, these students will be placed in practicum experiences within qualified community health care centers, resulting in more slots for patient care.

**Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

The project is not planned to use funds other than those allocated by the state.

**Describe how this project supports the agency's strategic master plan or would improve agency performance.**

**Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

EWU currently has a presence in Spokane for select degrees that necessitate close proximity to industry partners, accessibility for patrons who will be using the services, and to accommodate students who may be working part-time in or near Spokane. This is consistent with the current Master Plan, which addresses the larger community and how EWU students are able to serve and be served by the region. In addition the University will be embarking on a new Comprehensive Campus Master Plan which will specifically address the larger region of the Inland Northwest as well as Cheney proper. This exercise will complete very near to when the Dental Therapy Lab and Clinic will begin design.

**Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach [IT Addendum](#).**

This project does not fund the development or acquisition of new or enhanced software or hardware systems or services. The facility will use already established software and hardware platforms that are currently in place.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**  
NA

**How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

This project is a tenant improvement and as such will not have a significant impact on the envelope or energy performance of the building. It will however utilize the most current lighting technology and equipment to lessen the energy consumption. The project will meet all regulatory requirements for energy use, greenhouse gas emissions, and occupant comfort and safety. EWU is committed to decreasing its carbon footprint in all aspects of operation.

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:40PM

Project Number: 40000157

Project Title: Dental Therapy Lab and Clinic

**Description**

**How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

Relocating the EWU's Dental Clinic will directly support the creation of the Dental Therapy degree. The demand for Dental Therapists is particularly strong in rural settings. Federally Qualified Healthcare Centers (FQHC), tribal clinics, and similar types of clinics will benefit from dental therapists who will be able to take the burden of routine procedures off dentists and increase their ability to see patients in a timely manner. The dental therapist's supervisory capability provides opportunities for satellite settings as well as in-home visits in rural settings.

**Is this project eligible for Direct Pay? If yes, include this project in the [Direct Pay Form](#) for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

It is not anticipated that the project is eligible for Direct Pay.

**Is there additional information you would like decision makers to know when evaluating this request?**

This project will allow the continued and sustainable growth of the program to flourish and take advantage of other strategic relationships that would not otherwise be possible. While supporting and nurturing students, the facility also serves a vital role in the community by providing care that would not likely happen without the program. Funding this project will create compounding ripples of success throughout the region.

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why an appropriation is needed.**

## Availability of Space/Campus Utilization Template

Project name: Dental Therapy Lab and Clinic

CBS/OFM Project #: 40000157

Institution: Eastern Washington University

Category: Renovation - Major

Campus/Location: Spokane, WA

**Enrollment**

|  |   |
|--|---|
| 2023 fall on-campus student FTE: <span style="border: 1px solid black; padding: 2px;">8,680</span> | Expected 2024 fall on-campus student FTE: <span style="border: 1px solid black; padding: 2px;">8,246</span> |
|  | % increase budgeted: <span style="border: 1px solid black; padding: 2px;">-5.00%</span>                     |

Enter the average number of hours per week each for (a) classroom seat and (b) classroom lab is expected to be utilized in Fall 2024 for the campus where the project is located.

| (a) General University Classroom Utilization |            | (b) General University Lab Utilization     |             |
|--|------------|--|-------------|
| Fall 2023 Weekly Contact Hours               | 60,425     | Fall 2023 Weekly Contact Hours             | 11,565      |
| Multiply by % FTE Increase Budgeted          | -5.00%     | Multiply by % FTE Increase Budgeted        | -5.00%      |
| Expected Fall 2024 Contact Hours             | 57,404     | Expected Fall 2024 Contact Hours           | 10,987      |
| Expected Fall 2024 Classroom Seats           | 6,415      | Expected Fall 2024 Class Lab Seats         | 996         |
| <b>Expected Hours per Week Utilization</b>   | <b>8.9</b> | <b>Expected Hours per Week Utilization</b> | <b>11.0</b> |
| HECB utilization standard (hours/GUC seat)   | 22.0       | HECB utilization standard (hour/GUL seat)  | 16.0        |
| Difference in utilization standard           | -59.3%     | Difference in utilization standard         | -31.1%      |

If the campus does not meet the 22 hours per classroom seat and/or the 16 hours per class lab HECB utilization standards, describe any institutional plans for achieving the utilization standard.

Eastern Washinton University finds itself in a similar situation as so many other Universities around the nation in a post-pandemic environment. During this time while the focus needs to remain on increasing enrollment, it is vitally important to invest in current facilities so that they continue to serve students, do not fall into disrepair, and are designed to meet future demands, technologies, and teaching pedagogies. In order to achieve this, EWU has embarked on a number of studies to best determine future actions which may range from strategic investment in facilities and/or contracting in others. Some of that work is summarized below.

SRA - In 2022, the University began a Strategic Resource Allocation (SRA) process which entailed a systematic, collaborative, and transparent process to examine the ways resources are being invested. As a regional comprehensive university, it is EWU’s goal to ensure that academic programs are best aligned to meet regional workforce needs, and university services aligned in such a manner as to ensure the student experience is meaningful and campus resources are efficient, effective, and sustainable. The process culminated in 2024 and measures are being put into place to make the University as efficient as possible, including physical improvements, consolidation, and/or reductions where facilities are no longer effectively serving the University.

Strategic Planning – Eastern Washington University is in the process of a Strategic Planning effort to guide the direction and growth of Eastern Washington University. By systematically assessing strengths, weaknesses, opportunities, and threats, EWU will articulate a clear vision for the future and establish well-defined goals. This process enables the University to align its resources, expertise, research endeavors, and educational programs effectively.

CCMP – EWU has just started the process to develop a Comprehensive Campus Master Plan (CCMP) to replace the previous plan that was completed in 2014. Recognizing the unique character, current physical and financial conditions, program and space needs, and growth during the past 10 years and projected into the future, the CCMP will be a guiding document to inform decisions for the next 10 years regarding development, growth, consolidation, etc. This document will include and be informed by numerous other studies that are recently completed or underway: SRA, Strategic Plan, Decarbonization Plan, Climate Resiliency and Sustainability, CCMP, Geothermal Studies, Housing Plan, Currently Planned Construction and Renovation Projects, and Predesign Studies.

| Athletic                            | \$385                     | NA                |             |               |
| Assembly, exhibit and meeting rooms | \$428                     | \$616             | 3,500       | \$2,155,622   |
|                                     |                           |                   |             | \$16,727,172  |

C-100 to expected MACC variance:

**Efficiency of space allocation.** For each major function in the proposed facility (classroom, instructional labs, offices), identify whether space allocations will be consistent with the Facility Evaluation and Planning Guide (FEPG) assignable square feet standards. If any proposed allocations exceed FEPG standards, explain the alternative standard that has been used and why.

Response: The facility is being planned based on FEPG and other industry standards. Below is a possible scenario for reference:

| <b>EWU Dental Hygiene Space Requirements</b> |                   |                      |               |   |
|--|-------------------|----------------------|---------------|---|
| <b>Use</b>                                   | <b># of Rooms</b> | <b>Area per Room</b> | <b>SF</b>     | <b>Comments</b>   |
| Reception                                    | 1                 | 350                  | 350           | ~20-25 chairs for ~40 patients arriving simultaneously that are quickly moved to the dental clinic                                  |
| Front Office / Billing / Student Call        | 1                 | 200                  | 200           | 2 Staff + 4 Student Call Stations   |
| Private Front Office                         | 1                 | 100                  | 100           | Directly connected to Front Office  |

| <b>Tenant Dedicated</b>                      |                   |                      | <b>18,575</b> |   |
| Building Load Factor                         | 0.35              |                      | 6,501         |   |
| <b>RSF</b>                                   |                   |                      | <b>25,076</b> |   |

**Instructions:**

Provide the facility's condition score (1 superior – 5 marginal functionality) from the 2016 Comparable Framework study, and summarize the major structural and systems conditions that resulted in that score. Provide selected supporting documentation in appendix, and reference them in the body of the proposal.

**Narrative Response:**

NA

**Instructions:**

Identify the estimated number of additional FTE students the project is expected to enable the institution to serve when the space is fully occupied. Describe the method by which additional FTEs are calculated, including an analysis of probable student enrollment demand from project completion to full occupancy. Also provide an estimate of the number of additional FTE enrollments in high-demand fields and the fields in which such growth is expected to occur.

Per RCW 43.88D.010(1)(a), growth projects must also demonstrate that they can more cost- effectively provide enrollment access than alternatives such as university centers and distance learning.

**Narrative Response:**

The undergraduate Dental Hygiene program currently enrolls 130 annualized FTES (see definitions below) on average. This is a cohort-based program that runs at full capacity, so we anticipate no enrollment changes in the undergraduate degree with the new facility.

The new MS in Dental Therapy will enroll an additional 36 graduate students per year at full capacity. Assuming that these will be full-time graduate students taking 10 credits per semester (full-time by EWU’s definition), this will add another 36 FTES, bringing the total enrollment in the Department of Dental Hygiene to 166 FTES (annualized). We anticipate that the FTES will grow as follows:

| <b>Expected Students</b>    | <b>FY 2026</b> | <b>FY 2027</b> | <b>FY 2028</b> | <b>FY 2029</b> | <b>FY 2030</b> | <b>FY 2031</b> |
|-----------------------------|----------------|----------------|----------------|----------------|----------------|----------------|
| BS Dental Hygiene FTES      | 130            | 130            | 130            | 130            | 130            | 130            |
| MS Dental Therapy Headcount | 0              | 12             | 24             | 36             | 36             | 36             |
| MS Dental Therapy FTES      | 0              | 12             | 24             | 36             | 36             | 36             |
| <b>Total FTES</b>           | <b>0130</b>    | <b>142</b>     | <b>154</b>     | <b>166</b>     | <b>166</b>     | <b>166</b>     |

These FTES are all in high-demand health fields.

**Definitions:**

for undergraduate students, Student Semester Credit Hours/12 = FTES

for graduate students, Student Semester Credit Hours/10 = FTES

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/9/2024 3:00AM

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

**Project Phase Title:** Design  
**Starting Fiscal Year:** 2026  
**Project Class:** Program  
**Agency Priority:** 4

### Project Summary

Eastern Washington University requests funding to create a state-of-the-art facility that will significantly expand and enhance the university's engineering education capabilities. The project involves constructing an 82,522 gross square feet (GSF) building connected to the existing Computing and Engineering Building (CEB). The project will also modify 42,411 GSF of existing space in CEB to integrate with the new structure, optimizing existing facilities for non-laboratory courses and operational efficiencies. Designed to address the growing demand for engineers in Washington State, the new facility will provide modern, flexible, and pedagogically appropriate spaces to support enrollment growth, including a new Civil Engineering program.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

#### **Problem/Opportunity Identification:**

Eastern Washington University (EWU) faces a critical opportunity to enhance its engineering programs, which are currently hindered by outdated and inadequate facilities. The university's high-tech, hands-on engineering pedagogy has outgrown its existing laboratory spaces, originally designed to train high school shop teachers. These facilities are no longer sufficient to meet the demands of contemporary engineering education, particularly as EWU seeks to expand its offerings to include a Civil Engineering (CE) program. This expansion is vital to addressing the statewide shortage of civil engineers and leveraging EWU's existing strengths in mechanical engineering, geosciences, and construction management.

#### **Priority and Underserved Communities:**

This project is a high priority for EWU, as it directly supports the university's mission to provide an inclusive, equitable, and transformative learning experience. The new Engineering Building will play an important role in increasing enrollment in high-demand STEM programs, particularly benefiting rural and underserved populations. EWU has developed successful outreach programs to these communities, creating a strong pipeline for future students. By providing modern, flexible, and safe facilities, the university will be better positioned to serve these populations and meet the workforce needs of Washington State, where there is a 65% gap in the supply of engineering graduates.

#### **Public Safety Improvements:**

The current teaching laboratories in the Computing and Engineering Building (CEB) and Cheney Hall pose significant safety concerns. Due to overcrowding and poor design, instructors lack proper sightlines to monitor all students during laboratory activities, increasing the risk of accidents. The proposed new Engineering Building will address these safety issues by providing purpose-built spaces that allow for better supervision, safer equipment placement, and compliance with safety standards. This improvement is crucial for ensuring the well-being of students and faculty, while also aligning with the university's commitment to providing a safe and supportive learning environment.

#### **Facility Preservation and Existing Deficiencies:**

The existing facilities, primarily the CEB and Cheney Hall, are outdated for modern engineering education. The CEB, designed in 2005 as a classroom and office building, has only one area (the basement) equipped with the necessary mechanical, electrical, and plumbing systems for hands-on training. However, even this space is inadequate, with low overhead clearances, insufficient electrical services, and inadequate infrastructure for advanced experiments. In Cheney Hall, the technological infrastructure is obsolete, with outdated data connectivity and an original electrical system from 1967 that cannot

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/9/2024 3:00AM

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

support today's educational technology needs.

### Operating Budget and Cost Efficiency:

Investing in a new Engineering Building will also lead to long-term operating budget savings. The current piecemeal adaptations of CEB and Cheney Hall are inefficient and costly to maintain. By consolidating engineering programs into a single, purpose-built facility, EWU can reduce ongoing maintenance expenses, improve energy efficiency, and eliminate the need for costly temporary fixes to existing deficiencies. Additionally, the new building will be designed with sustainability in mind, serving as a living laboratory for environmental stewardship and reducing operational costs through energy-efficient technologies.

In summary, the construction of a new Engineering Building at EWU is essential to overcoming current facility deficiencies, improving safety, and expanding high-demand engineering programs that will serve both the university's mission and the broader needs of Washington State. This project will not only enhance the educational experience for students but also support underserved communities and contribute to the state's economic development by addressing the critical shortage of qualified engineers.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

The budget request for Eastern Washington University's (EWU) new Engineering Building aims to produce a state-of-the-art facility that will significantly expand and enhance the university's engineering education capabilities. The project will involve the construction of an 82,522 gross square feet (GSF) building, connected to the existing Computing and Engineering Building (CEB). Additionally, 42,411 GSF of space within the CEB and Cheney Hall will be modified to integrate with the new structure, optimizing the use of existing facilities for non-laboratory courses and operational efficiencies.

The project is designed to address the growing demand for engineers in Washington State, where there is a projected 65% gap in the supply of engineering graduates needed to meet workforce demands over the next five years. By providing modern, flexible, and pedagogically appropriate spaces, the new building will support enrollment growth, particularly with the introduction of a new Civil Engineering program. Conservative estimates forecast a 76% increase in engineering enrollment within the first four years of the building's occupancy.

The timeline for the project anticipates an immediate start upon securing funding, with a goal to complete the construction within a set timeframe that aligns with EWU's strategic goals and the urgent need for expanded engineering capacity. Specific details regarding the start and end dates will depend on the final approval and funding allocation.

Construction begins: July of 2027 (Mid-point 11/28)

Construction ends: March of 2030

The project can be phased to align with available funding and construction logistics. The initial phase, which is the focus of the current budget request, includes the predesign, design, and early construction activities necessary to begin the project. Detailed cost backups will provide a comprehensive breakdown of expenses associated with each phase, ensuring transparency and alignment with EWU's financial planning and state funding requirements.

This phased approach allows for flexibility in managing the project while ensuring that critical milestones, such as the expansion of instructional spaces and the introduction of the Civil Engineering program, are prioritized to meet the increasing demand for engineering graduates in Washington State.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/9/2024 3:00AM

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

See EWU's submitted Predesign report for detailed cost breakdown.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

Design and construction of a new engineering building and targeted renovation of existing space in CEB and Cheney Hall to provide contemporary, pedagogically appropriate facilities. The project will provide sufficient high quality teaching laboratories to flexibly serve multiple degree programs over time, provide state-of-the-art engineering research facilities for faculty and industry collaboration,

Direct connection to CEB takes advantage of CEB's strengths, creating efficiencies such as shared instructional resources, direct access to faculty and administrative offices, and shared student amenities.

### Not Taking Action

The consequences of taking no action would be a negative impact on EWU students, the engineering programs, the University, the region, and the State. No action would maintain substandard, pedagogically inappropriate facilities and makes it impossible for EWU to offer new, high-demand STEM degree programs such as civil engineering. Student success in EWU's engineering programs could not be ensured. The result would be that EWU would not be able to produce more graduates in high demand engineering professions and this would undermine the policies of the Washington Student Achievement Council and the Office of Financial Management.

Additionally, the current Engineering Building would continue to have significant deficiencies in building systems, technology, student spaces and general quality. The current facilities would also continue to experience high maintenance and repair costs, which if deferred will result in facilities that are not capable of supporting even the current student load.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

Alternative 1: Preferred Alternate - New Engineering Building on the Existing Campus

Alternative 2: Renovation of Existing Engineering Facilities

Alternative 3: No Action

#### Alternative 1: Preferred Alternate - New Engineering Building on the Existing Campus

Satisfaction of the program requirements can readily be achieved through construction of a new building on the Cheney campus providing the contemporary, pedagogically appropriate facilities needed to flexibly serve multiple hands-on degree programs including the existing MENT and prospective CE programs. It will improve the quality and safety of laboratories, increase faculty research opportunities, support community and prospective student outreach activities, and encourage student engagement with each other and the regional engineering industry.

The new structure will be designed to provide desired health, safety and functionality without compromise. The new building will connect to CEB, taking advantage of CEB's strengths, creating efficiencies such as shared departmental and instructional resources, direct access to faculty and administrative offices, and shared student amenities. The building will be a student centered environment that provides a high-quality engineering teaching and research environment that is responsive to the needs of engineering education and the engineering industry.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/9/2024 3:00AM

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

### Alternative2: Renovation of Existing Engineering Facilities

An alternative for addressing the deficiencies of the existing facilities would be a major renovation of CEB and Cheney Hall. The alternative falls short in serious ways: it is not only similar in cost to a new building, it results in substandard teaching and research laboratories and continued operational and systems inefficiencies, and it eliminates eight good quality, general use classrooms and two computer labs. Additional costs would be incurred to relocate the entire Engineering Department and others from both buildings during construction.

CEB was completed in 2005, is currently in good condition for its primary purpose as a classroom, computer lab and office building. However, the existing structure and systems of CEB are not compatible with the needs of engineering education. The ventilation demands and laboratory support systems in an engineering facility require above-average floor-to-floor heights that allow clear ceiling space for large duct work and laboratory plumbing and electrical systems. The existing CEB mechanical, engineering and plumbing systems are suited only for office, classroom and computer lab space. They are not adequate for engineering and cannot be made so without substantial demolition and reconstruction of the superstructure. Resulting labs would still be substandard in size and quality due to restricted dimensions and existing low ceiling heights.

Cheney Hall was completed in 1966 and many of the components are approaching end of expected life cycles. It currently houses a portion of the athletics department and swing space for the sciences. Both buildings do not meet current ADA, structural and energy codes.

### Alternative 3: No Action

See statement in #3 What would be the result of not taking action?

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

The budget request for the new Engineering Building at Eastern Washington University (EWU) will significantly impact a wide range of clientele, including students, faculty, regional industries, and the broader Washington State community. The primary beneficiaries will be students enrolled in the Department of Mechanical Engineering & Technology (MENT) and the proposed Civil Engineering (CE) program. These students will gain access to modern, high-tech, hands-on teaching and research laboratories, which are crucial for their education and future careers. The new facilities will replace the current substandard spaces that have long hindered the department's ability to provide contemporary engineering education and meet safety and accessibility standards.

The project will add an 82,522 GSF building dedicated to advanced engineering education, with 42,411 GSF of the existing Computing and Education Building (CEB) and Cheney Hall being modified to integrate with the new space. This expansion is expected to drive significant growth in engineering enrollment, with projections indicating a 76% increase within the first five years of occupancy. This growth will allow EWU to produce more graduates in mechanical engineering and the newly proposed civil engineering program, directly addressing the statewide shortage of civil engineers.

The broader community, including regional civil engineering firms and the Spokane and West Plains mechanical engineering marketplace, will benefit from the increased number of highly trained graduates. These firms often rely on EWU for qualified professionals, and the expansion will help meet the growing demand for engineers across Washington State. The new building will also enhance the university's ability to conduct engineering research and foster on-campus industry collaboration, further serving the community and the state by tackling some of the 21st century's most pressing challenges.

## 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/9/2024 3:00AM

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

### Description

Listed below are the degree options, within the Department of Mechanical Engineering & Technology. Key to the project is in the integrated labs and support spaces that allow for community outreach programs and activities with rural and underserved populations. The new facility will encourage student engagement with the regional engineering industry, the Engineering Department and each other.

Current programs/degrees associated with this project are as follows:

- Mechanical Engineering / Mechanical Engineering Technology (Bachelor of Science)
- Manufacturing Technology: DFM Option (Bachelor of Science)
- Manufacturing Technology: Process Option (Bachelor of Science)
- Construction Management Technology (Bachelor of Science)
- Applied Technology (Bachelor of Science)

Future programs/degrees associated with this project are as follows:

- Civil Engineering (Bachelor of Science)

**Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state (or other) share of project cost allowable and the supporting citation or documentation.**

This project does not leverage non-state funding.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

#### EWU's Mission & Vision:

The proposed Engineering Building will support EWU's mission and vision by providing facilities which will encourage enrollment, support community and prospective student outreach activities with rural and underserved populations, improve the quality and safety of laboratories, and encourage student engagement with each other, the engineering programs and the regional engineering industry.

**EWU Mission:** Eastern Washington University provides an inclusive, equitable, and transformative learning experience, driving the pursuit of knowledge with affordable academic excellence.

**EWU Vision:** Eastern Washington University provides an education rooted in the liberal arts, designed to address the unique challenges and opportunities facing the region. Characterized by a student-centered focus and opportunities for applied learning in high demand fields, this education creates upward social mobility and intellectual growth for our students that supports a healthy, sustainable, and economically successful region.

#### EWU Values:

**Academic Excellence.** As a community of learners, we pursue truth and advance knowledge through creative works, research, and scholarship. Our student-centered education provides excellent teaching, dynamic conversations, and a robust intellectual experience both inside and outside the classroom. We provide applied learning opportunities to prepare students for future success, invest in our workforce and create opportunities for professional growth for students, faculty, and staff.

**Engineering Building's Role:** The Engineering Building's contemporary, hands-on teaching laboratories and collaboration

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

spaces will support innovative instruction and exchange of ideas. Increased enrollment through a contemporary facility that celebrates applied learning will allow the department to add a civil engineering degree and graduate programs which will result in additional FTE faculty hires.

**Accessibility.** Eastern Washington University strives to create a more inclusive, obtainable, and equitable college education.

**Engineering Building's Role:** The Engineering Building will increase access to high demand degrees and provide critical space for community engagement with prospective rural and underserved students.

**Belonging through Justice, Equity, Diversity and Inclusion.** We are committed to building an inclusive, supportive, and equitable university community. We strive to integrate the principles of justice, equity, diversity, and inclusion into all university operations, fostering an environment that nurtures a sense of belonging among all members of the community. Students, staff, and faculty are seen, understood, and appreciated for the talents they bring to our educational community.

**Engineering Building's Role:** The Engineering Building will be a place to practice inclusive practices through the hands-on nature of the teaching laboratories, the transparency in student project laboratories, ample space to assemble and display student work, and visible spaces for team collaboration and student clubs. A central space for internal and outreach events and celebrations welcomes and invites students and faculty to participate in the larger engineering community.

**Regional Impact and Regional Contribution.** We promote economic vitality and regional success through scholarly research, dedicated service, and educational programs that meet regional workforce needs in high demand fields. When combined with our commitment to a liberal arts education, we enhance social mobility, inclusivity, and the well-being of our community while remaining nimble to its ever-changing demands.

**Engineering Building's Role:** Not only will the Engineering Building contribute meaningfully to the regional engineering workforce demand through increased enrollment, it will increase student and faculty interaction with the cutting-edge mechanical and civil engineering industries in the region through contemporary research laboratories and flexible space for departmental outreach.

**Student Success.** We embrace all students. Students' needs are complex, and student success requires student engagement and positive outcomes. We are committed to supporting all our students with a focus on creating conditions informed by the needs of our first-generation, low-income, and other structurally marginalized students.

**Engineering Building's Role:** The Engineering Building will be a student-centered environment. Its high quality, hands-on teaching and project laboratories, flexible work areas and student interaction spaces will inspire and fully support their unique engineering interests and ideas through degree completion.

**Sustainability.** We are leaders committed to sustainability as a balance between the needs of the environment, the needs of the economy, and equitable outcomes for current and future generations.

**Engineering Building's Role:** The Engineering Building will be a living laboratory for sustainable facility design, with building systems on display for faculty and students. A civil engineering program helps to sustain the local economy and infrastructure.

**Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not fund the development or acquisition of new or enhanced software or hardware systems or service. This facility will use already established software and hardware platforms that are currently on campus.

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/9/2024 3:00AM

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery in the 2025-27 Operating Budget Instructions.

Not applicable for this project.

How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?

### Sustainable Design

Sustainable strategies to reduce and enhance the project's impact on the environment and lower its energy demand will ultimately have a beneficial effect on its longevity and operational cost. Reusing and upgrading existing buildings is the most important greenhouse gas reduction strategy in the built environment, reducing air pollution, eliminating waste, and reducing the demand for new materials. There are numerous regulations and plans that point this project towards highly energy efficient and low-carbon building strategies listed below, along with many sustainability strategies that can be advanced in the next phase.

**High Performance Buildings:** Eastern Washington University has a proven track dating back to 2008 of designing and constructing high-performance buildings using the LEED rating system. This project will select design consultants who embody EWU's sustainability objectives. This project will be designed, constructed, and certified to the LEED Silver Standard, as a minimum, in accordance with RCW 39.35D. A LEED Checklist, outlining a preliminary approach to silver, has been included in the Appendix. EWU has had a history of achieving LEED silver or higher and will strive to achieve LEED gold or platinum on this project.

**State Efficiency and Environmental Performance:** The Governor's Executive Order 20-01 mandates high performance buildings for reduction of greenhouse gases, reduction of pollutants from fossil fuels, and the use of clean energy when technically and economically feasible. Eastern Washington University acknowledges that the costs of constructing zero energy or zero energy capable buildings are nearing parity with conventional buildings. Consequently, the university will further progress its building construction endeavors toward this directive, employing life-cycle cost analysis tools to inform decision-making throughout the design process. The life-cycle cost analysis performed as part of this pre-design included the evaluation of a net zero building. In studying the use of photovoltaic (PV) solar panels for on-site renewable energy generation, the required area of PV panels exceeded the available roof area and would require additional dedicated site area. PV panels required by the Washington State Energy Code will be installed.

**State Energy Standards for Clean Buildings:** The Department of Commerce, through RCW 19.27A.210, has developed standards for reducing greenhouse gas emissions from the building sector as published in the Washington State Clean Buildings Performance Standard (2021). The Clean Building Performance Standard has established energy use intensity targets. This building is anticipated to exceed the 50,000 square feet threshold for Tier 1 Buildings, mandating compliance on the building level. EWU monitors their Energy Use Intensity (EUI) as a campus and has been evaluating their overall EUI in relation to the Washington State Clean Building Performance Standard, with a target campus EUI of 112.2. The preferred building option of this pre-design is anticipated to reduce the entire campus' EUI from the current value of 118.4 closer to compliance with the Clean Building Performance Standard EUI requirement.

Project Number: 40000156

Project Title: Civil Engineering Building - Applied Engineering

## Description

As of March 15,2024, the 2021 Edition of the Washington State Energy Code has been implemented.Washington State Energy Codes are on a path towards 70% energy use reduction and theelimination of fossil fuels from buildings by 2031. With progressively moreaggressive energyrequirements, facilities will progress towards reducing energy consumption andassociated greenhouse gasemissions, as outlined in the Greenhouse Gas Emissions Policy. The 2021 codeincludes a requirement for photovoltaics panels on site. The project will bepermitted under the code in effectat the time of permit which may be the 2021 codes or the 2024 codes, which are expected to bein effect November of 2026.

**Requiredvehicle charging capabilities:** Per RCW 19.27.540, where new parking isprovided at the building,electric vehicle charging stations and infrastructure shall be provided incompliance with WAC51-50-0429. The electric vehicle charging stations and infrastructure shallmeet Level

**Location**

City: Cheney

County: Spokane

Legislative District: 009

**Project Type**

New Facilities/Additions (Major Projects)

**Growth Management impacts**

None - Located on existing EWU campus

**New Facility:** No

**How does this fit in master plan**

Growth in the STEM fields directly aligns with Eastern's 2014 Master Plan. This will also serve local industries as well as the design and engineering community. In addition, EWU is in the process of updating the Master Plan which will be completed in 2025.

| Expected Fall 2024 Classroom Seats           | <span style="border: 1px solid black; padding: 2px;">6,415</span>      | Expected Fall 2024 Class Lab Seats         | <span style="border: 1px solid black; padding: 2px;">996</span>         |
| <b>Expected Hours per Week Utilization</b>   | <b><span style="border: 1px solid black; padding: 2px;">8.9</span></b> | <b>Expected Hours per Week Utilization</b> | <b><span style="border: 1px solid black; padding: 2px;">11.0</span></b> |
| HECB utilization standard (hours/GUC seat)   | <span style="border: 1px solid black; padding: 2px;">22.0</span>       | HECB utilization standard (hour/GUL seat)  | <span style="border: 1px solid black; padding: 2px;">16.0</span>        |
| Difference in utilization standard           | <span style="border: 1px solid black; padding: 2px;">-59.3%</span>     | Difference in utilization standard         | <span style="border: 1px solid black; padding: 2px;">-31.1%</span>      |

If the campus does not meet the 22 hours per classroom seat and/or the 16 hours per class lab HECB utilization standards, describe any institutional plans for achieving the utilization standard.

Eastern Washinton University finds itself in a similar situation as so many other Universities around the nation in a post-pandemic environment. During this time while the focus needs to remain on increasing enrollment, it is vitally important to invest in current facilities so that they continue to serve students, do not fall into disrepair, and are designed to meet future demands, technologies, and teaching pedagogies. In order to achieve this, EWU has embarked on a number of studies to best determine future actions which may range from strategic investment in facilities and/or contracting in others. Some of that work is summarized below.

**SRA** - In 2022, the University began a Strategic Resource Allocation (SRA) process which entailed a systematic, collaborative, and transparent process to examine the ways resources are being invested. As a regional comprehensive university, it is EWU’s goal to ensure that academic programs are best aligned to meet regional workforce needs, and university services aligned in such a manner as to ensure the student experience is meaningful and campus resources are efficient, effective, and sustainable. The process culminated in 2024 and measures are being put into place to make the University as efficient as possible, including physical improvements, consolidation, and/or reductions where facilities are no longer effectively serving the University.

**Strategic Planning** – Eastern Washington University is in the process of a Strategic Planning effort to guide the direction and growth of Eastern Washington University. By systematically assessing strengths, weaknesses, opportunities, and threats, EWU will articulate a clear vision for the future and establish well-defined goals. This process enables the University to align its resources, expertise, research endeavors, and educational programs effectively.

**CCMP** – EWU has just started the process to develop a Comprehensive Campus Master Plan (CCMP) to replace the previous plan that was completed in 2014. Recognizing the unique character, current physical and financial conditions, program and space needs, and growth during the past 10 years and projected into the future, the CCMP will be a guiding document to inform decisions for the next 10 years regarding development, growth, consolidation, etc. This document will include and be informed by numerous other studies that are recently completed or underway: SRA, Strategic Plan, Decarbonization Plan, Climate Resiliency and Sustainability, CCMP, Geothermal Studies, Housing Plan, Currently Planned Construction and Renovation Projects, and Predesign Studies.

C-100 to expected MACC variance: 85%

Due to their HVAC, plumbing and equipment needs, engineering labs are at the high end of the range indicated in the HEFS Report ALTERNATE USING HIGH END OF LABORATORY RANGE PER TABLE 2 IN HIGHER EDUCATION FACILITY STUDY (Rev 2020)

**Efficiency of space allocation.** For each major function in the proposed facility (classroom, instructional labs, offices), identify whether space allocations will be consistent with the Facility Evaluation and Planning Guide (FEPG) assignable square feet standards. If any proposed allocations exceed FEPG standards, explain the alternative standard that has been used and why.

**EWU Engineering Building & Targeted Renovations of CEB and Cheney Hall**

| FEPG room classification number | FEPG room classification type      | Project ASF per station | FEPG standard         | Meets standard (Y/N) | Comments  |
|---------------------------------|------------------------------------|-------------------------|-----------------------|----------------------|---|
| 110                             | Classroom                          | 20                      | 16-26                 | Y                    |   |
| 210                             | Class lab – mechanical engineering | 57-290                  | 175<br>(Range 35-180) | Y/N                  | Varies based on engineering equipment sizes; see FEPG Standards Appendix A; Wood, Metals, Additive Manuf and Concrete Labs require significant additional ASF/Station for large equipment and working clearances. |
| 215                             | Class lab – services               |                         |                       | N/A                  | Sized appropriately to class lab needs  |
| 230                             | Computer lab                       | 44                      | 60                    | N                    | Falls below FEPG Guidelines but meets programming need  |
| 250                             | Research lab                       |                         |                       | N/A                  | Sized for research program needs  |
| 255                             | Research lab – service             |                         |                       | N/A                  | Sized appropriately to research lab needs   |
| 311                             | Faculty office                     | 140                     | 140                   | Y                    |   |
| 313                             | Student assistants                 | 70 per 1                | 140 per 2 min.        | Y                    |   |
| 314                             | Clerical office                    | 140                     | 140                   | Y                    |   |
| 316 & 317                       | Staff & other office               | 113                     | 120                   | Y                    | Below standards appropriate for visiting Advising staff   |
| 350                             | Conference room                    | 30                      | 20                    | N                    | Sized to allow program flexibility and storage needs  |
| 550                             | Demonstration                      |                         |                       | N/A                  | Sized appropriately for departmental needs  |
| 651                             | Nonpublic lounge                   |                         |                       | N/A                  | Sized appropriately for departmental needs  |
| 680                             | Meeting room                       |                         |                       | N/A                  | Sized appropriately for departmental needs  |

Identify the (a) assignable square feet in the proposed facility; (b) the gross square feet; and (c) the net building efficiency (“a” divided by “b”).

**Instructions:**

Provide the facility's condition score (1 superior – 5 marginal functionality) from the 2016 Comparable Framework study, and summarize the major structural and systems conditions that resulted in that score. Provide selected supporting documentation in appendix, and reference them in the body of the proposal.

**Narrative Response:**

Computing and Engineering Building Conditions Deficiencies: CEB was completed in 2005 and soon thereafter lacked any expansion space for program growth. The 2016 Facility Condition Assessment ranks the condition of the facility as "good/excellent" with an **overall 1.6 Facility**

Cheney Hall Building Conditions Deficiencies: Cheney Hall was originally completed in 1966 to house the Industrial Arts program. The building is 50 years old. There have been some minor renovations of the building in 2006 and 2016. The balance of the shell and space is of original construction and condition. **The Overall Facility Condition Score for the building is 2.6.** Many of the components are in the Fair-Systems Approaching End of Expected Life Cycles with some at critical level of Needs Improvement; Limited Functionality.

- Substructure : 2.0
- Shell : 2.3
- The substructure and the shell of the building rank in the category of "good." The roof and windows on the facility are original installation and do not meet current state energy code. The exterior walls and roof are not insulated and affect the utility cost of heating and cooling the building.
- Interiors: 2.8
- Most the interior walls, floors and ceiling are "worn" due to age with ceiling ranking 4 or "poor".
- Services: 3.0

The systems of the building are what show the most decline. While the Plumbing and Electrical are in the "fair" range, the HVAC and Fire Protection components are at the level of 4 and 5 "poor" equipment marginal or "unsatisfactory" system non-functioning or seriously deficient. The building HVAC system does not meet current Washington State energy code and there are reported indoor air quality issues that can only be address by a new ventilation system. The building has many Americans with Disability Act (ADA) deficits due to the age and the original design. In particular, the elevator does not meet ADA requirements for current square foot or controls location.

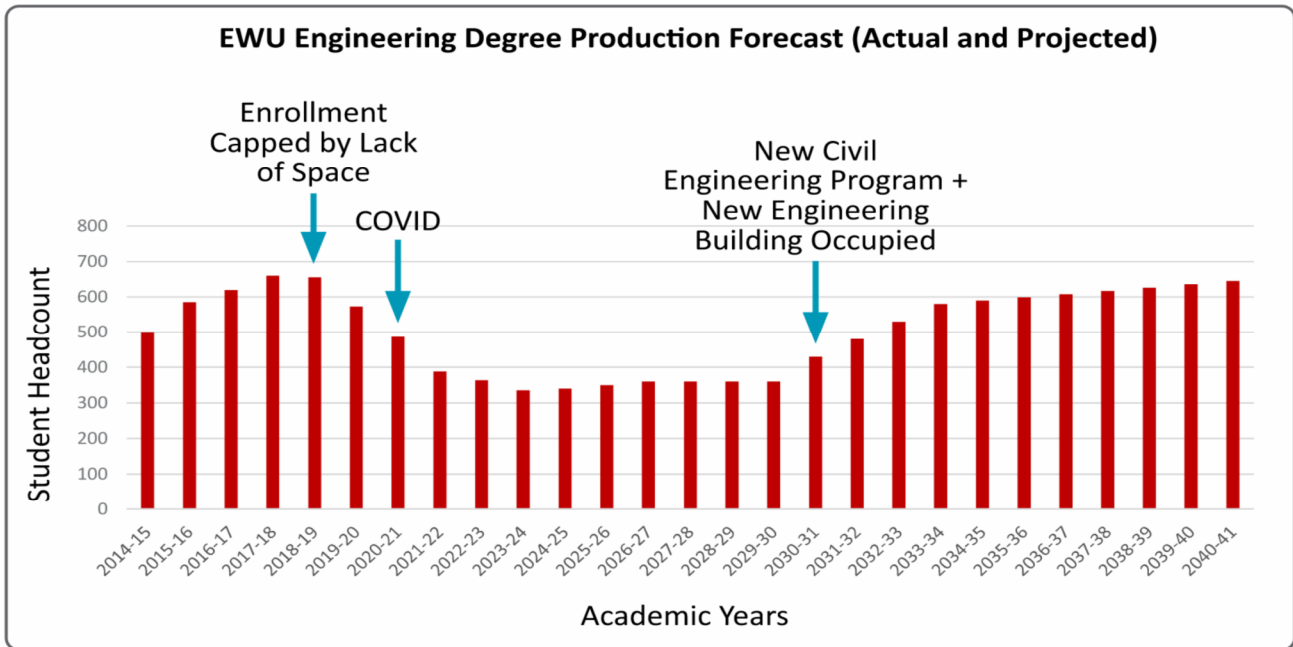

**Instructions:**

Identify the estimated number of additional FTE students the project is expected to enable the institution to serve when the space is fully occupied. Describe the method by which additional FTEs are calculated, including an analysis of probable student enrollment demand from project completion to full occupancy. Also provide an estimate of the number of additional FTE enrollments in high-demand fields and the fields in which such growth is expected to occur.

Per RCW 43.88D.010(1)(a), growth projects must also demonstrate that they can more cost- effectively provide enrollment access than alternatives such as university centers and distance learning.

**Narrative Response:**

From 2010 through 2020, EWU’s Mechanical Engineering and Technology program experienced strong and sustained enrollment growth. Rebuilding post-Covid requires contemporary, inspiring, pedagogically appropriate facilities that can flexibly serve multiple hands-on degree programs in the future. The Engineering Department has built highly successful outreach programs to rural and underserved prospective student populations and continuation programs with community colleges, which have created a strong pipeline for future MENT & CE students. With the introduction of a new Civil Engineering degree, conservative forecasting shows enrollment increasing 76% in the first four years of building occupancy.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

Starting Fiscal Year: 2022

Project Class: Program

Agency Priority: 5

### Project Summary

Eastern Washington University requests funding to construct the proposed Lucy Covington Leadership House, an approximately 15,000-square-foot facility that will serve as a center to support the success of Native American students at the university and beyond. The facility is designed to foster a sense of community and ease students' transition from home to the university setting. It will feature cultural and community gathering areas, event spaces, student collaboration and support spaces, as well as exhibit galleries and performance areas. The project will advance the goals of Eastern Washington University's Lucy Covington Initiative by honoring Lucy Covington's legacy and providing dedicated support for American Indian students, reinforcing the university's commitment to regional tribes.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

The priority of this initiative is to enhance the educational experience for American Indian students at EWU by honoring the legacy of Lucy Covington, a prominent advocate for tribal sovereignty and self-determination. The project seeks to build a space that not only supports the academic and cultural needs of Indigenous students but also serves as a hub for inter-tribal collaboration, cultural exchange, and community engagement. By focusing on these priorities, the Lucy Covington Leadership House aims to create an environment where American Indian students can thrive, develop leadership skills, and connect with their cultural heritage.

In operating budget savings and public safety improvements, the preferred alternative for the Lucy Covington Leadership House represents a strategic investment in physical and cultural infrastructure. The proposed facility, with its focus on student support, community gathering, and cultural exhibitions, will likely lead to long-term savings by reducing the need for ad-hoc support services and interventions that might be required. Moreover, the creation of a space that fosters community and cultural pride can contribute to a safer and more inclusive campus environment, reducing the potential for conflicts and promoting a sense of belonging among all students. The detailed design and planning process, including the consideration of alternative solutions, ensures that the project aligns with EWU's broader strategic goals while maximizing the impact of the available budget.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

The request will produce the design of the Lucy Covington Leadership House, a new 15,000-square-foot, one-story building at EWU. The facility is intended to support the goals of the Lucy Covington Initiative, focusing on three primary areas: community gathering, student support, and the celebration of Lucy Covington's life and legacy. Key features of the building will include a 300-seat speaking hall, a dedicated American Indian Student Center, a learning commons, a community kitchen and dining area, flexible meeting spaces, and an exhibit hall showcasing the life and cultural contributions of Lucy Covington and other tribal cultures.

The project is scheduled to start with the design phase in November 2026, following the anticipated awarding of design funding in the 2025-27 Capital Budget. If awarded design funding for this coming biennium, construction funds will be requested in the 2027 – 2029 Capital budget with substantial completion expected by November 2028 and ready for occupancy by February 2029. This timeline ensures that the project will be completed efficiently while allowing sufficient time

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

for thorough design and construction processes.

In the future, the project could be expanded in the future to include additional spaces such as instructional program areas for an expanded American Indian Studies program, a Tribal Government program, and a dedicated Salish Language teaching space, as outlined in Alternative 1. However, this expansion would require additional capital and operational funding, which is not part of this request.

The detailed cost breakdown, included in the June 2024 Predesign Report, for the project estimates a total budget of approximately \$20.4 million, with design funding request of \$2.4 million in the 2025-27 Biennium and construction funding request of \$18 million in the 2027-29 Biennium. This budget estimate covers all aspects of the project, from initial design to final construction, ensuring that the Lucy Covington Leadership House will be a fully functional, state-of-the-art facility upon completion.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

By constructing a dedicated space that fosters a sense of belonging, cultural awareness, and support, the project aims to create an inclusive and supportive environment for American Indian students. The preferred alternative, which involves building a 15,000-square-foot facility, is designed to bring together cultural and community gathering spaces, student support areas, and exhibition spaces that celebrate the life and legacy of Lucy Covington and American Indian cultures.

If no action is taken, the EWU strategic goals of increasing dedicated campus infrastructure to support American Indian Students would take longer to put into effect.

The Lucy Covington Leadership House represents a strategic investment that aligns with EWU's broader mission of fostering diversity, equity, and inclusion. The preferred alternative effectively addresses the identified problems by creating a physical space that supports the academic and cultural needs of American Indian students, thereby promoting their success and retention. This facility will serve as a hub for inter-tribal collaboration, cultural exchange, and community engagement, all of which are essential for addressing the historical and ongoing challenges faced by Indigenous students in higher education. The project's detailed planning and consideration of alternatives, such as the potential for future expansion, ensure that the initiative is both impactful and financially sustainable, maximizing the benefits to the university and the American Indian communities it serves.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

The predesign work included engagement with the Project Steering Committee, American Indian EWU students, and EWU American Indian Studies faculty. These teams considered a range of alternatives to meet the needs identified in Section 02. Alternatives that were evaluated include:

Alternative 1: Preferred Alternative: Lucy Covington Leadership House (~15,000 GSF)

Alternative 2: Full Buildout, Preferred Alternative + Future Expansion (~28,000 GSF)

Alternative 3: No Action

#### **PREFERRED PROGRAM: LUCY COVINGTON LEADERSHIP HOUSE (15,000 GSF)**

The conceptual program for the Preferred Alternative allocates approximately 10,000 net assignable square feet (NASF) for a total of approximately 15,000 gross square feet (GSF), into a single-story facility that supports the project goals described in

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

Section 02, Problem Statement. The proposed Lucy Covington Leadership House brings together cultural/community gathering and event space, student support and collaboration areas, and an exhibit gallery and performance space.

The proposed building concept provides a speaking hall that accommodates up to 300 people for community and cultural events, a learning commons for studying and student collaboration, and an exhibit space featuring the life and legacy of Lucy Covington and American Indian Art and Culture.

Multiple site locations for the project were reviewed as part of the Predesign process, including replacing existing infrastructure (Isle Hall) and a currently vacant site south of Martin and Williamson Hall. The Isle Hall building presents a promising opportunity for the project. Utilizing the Isle site could lead to significant improvements in Campus Energy Use Intensity (EUI) and provide a pathway towards compliance with the Clean Building Performance Standard and HB1390. This aligns with EWU's commitment to sustainability, carbon reduction, and energy efficiency. The forthcoming campus decarbonization and master plan will provide guidance regarding siting optimization and help to determine a final location for the Leadership House. Once the project is funded, further evaluation of this site should be incorporated into the design phase.

The Preferred Alternative achieves many of the project's goals and addresses the identified problem.

### **ALTERNATIVE 1: FULL BUILDOUT, PREFERRED ALTERNATIVE + FUTURE EXPANSION (~28,000 GSF)**

The full buildout alternative expands the program by about 8,000 NASF for approximately 13,000 additional GSF. The full buildout proposes building the 15,000 GSF Preferred Alternative along with a 13,000 GSF expansion for a total buildout of 28,000 GSF.

In addition to providing cultural/ community gathering and event spaces, student collaboration and support spaces, and exhibit gallery and performance spaces, the full buildout will have instructional program spaces that expand the American Indian Studies program and introduce potential programs such as a Tribal Government program and dedicated Salish Language teaching space. There will be additional classrooms and faculty offices associated with this expansion.

Alternative 1 achieves and expands upon the project's goals. It was not chosen due to the following challenges:

- Requires additional capital funding and therefore would result in a larger capital project funding request.
- Operational funding to expand academic programs as described above has not yet been procured.

### **ALTERNATIVE 2: NO ACTION**

The No Action Alternative would not address the goals of EWU.

American Indian students would continue to use the existing American Indian Education Center building, which houses the American Indian Studies program, for meetings, studying, and socializing. Dedicated campus infrastructure could become a rate limiting factor as EWU continues to increase programming and support for American Indian students.

Additionally, Alternative 2 - No Action, does not fulfill EWU's strategic mission in the following ways:

- It does not create additional dedicated space on campus for American Indian students and American Indian culture and could become a rate limiting factor in achieving EWU's goals for increasing enrollment of students from the regions numerous Tribal nations.
- It does not fulfill one of the primary purposes of the Memoranda of Understandings between EWU and three Tribal Nations: to construct a longhouse-style facility that enhances recruitment and success of American Indian students.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

The budget request for the Lucy Covington Leadership House primarily impacts American Indian students at EWU, as well as the broader campus community. The proposed facility is designed to address underrepresentation and declining enrollment of American Indian students by providing dedicated spaces that support their cultural, academic, and social needs.

The Preferred Alternative for the Lucy Covington Leadership House includes 15,000 gross square feet (GSF) of space, with approximately 9,690 square feet of assignable area. This facility will feature key program areas, including a Speaking Hall, Learning Commons, dining area with a community kitchen, flexible meeting spaces, and an exhibition gallery celebrating Lucy Covington's life and legacy. These spaces are intended to serve as central hubs for American Indian students, offering a place for community gatherings, academic collaboration, and cultural celebration.

The new facility will significantly enhance the visibility and support for American Indian students on campus by providing a central, accessible location that reflects Indigenous culture. This transformation of campus infrastructure dedicated to American Indian students will not only better accommodate the current student population but also aim to increase enrollment and retention by creating a welcoming and supportive environment.

### Net Assignable Square Feet (NASF)

#### COMMUNITYGATHERING AREAS

Speaking Hall: 5,100 NASF, 52.6% of NASF

#### AMERICANINDIAN STUDENT CENTER

Learning Commons: 1,800 NASF, 18.6%

Dining Area: 1,550 NASF, 16.0%

Flexible Meeting Space: 240 NASF, 2.5%

#### EXHIBITION AREAS

Lucy Covington Life & Legacy Gallery: 1,000 NASF, 10.3%

### Unassignable Square Feet (USF)

#### UNASSIGNABLE AREAS

Learning Commons: 910USF, 6.1% of GSF

Dining Area: 1,200USF, 8.0%

Flexible Meeting Space: 3,200 USF, 21.3%

**Total Building Area** 15,000 (efficiency 65%)

In summary, the Lucy Covington Leadership House will directly impact the American Indian student community at EWU by adding 15,000 GSF of purpose-built space, thereby helping to address the issue of underrepresentation and supporting the university's broader goals of cultural inclusivity and student success.

**Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state(or other) share of project cost allowable and the supporting citation or documentation.**

This project currently does not leverage non-state funding.

At this time The Lucy Covington Leadership House will be a fully State-funded project.

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

### CONNECTION TO AGENCY MISSION, GOALS & OBJECTIVES

The Lucy Covington Leadership House and Lucy Covington Initiative are part of EWU's strategic plan to increase graduation rates of underrepresented students (including American Indians).

The Lucy Covington Leadership House will support this endeavor through programs and events within the facility intended to boost enrollment and retention of American Indian students.

The Lucy Covington Leadership House aligns with EWU's mission to foster an inclusive, equitable, and transformative learning environment. American Indian students at EWU often encounter barriers to accessing higher education, have a higher risk of dropping out, and lower retention rates compared to other groups. American Indian students have barriers common to first-generation, low-income, and other structurally marginalized students. EWU strives to integrate the principles of justice, equity, diversity and inclusion into all University operations to foster an environment that nurtures a sense of belonging among all members of the community.

### SENSE OF BELONGING

EWU strives to foster a profound sense of belonging, actively promote and sustain equity, dismantle systemic barriers, and embrace the unique perspectives of all individuals. As a desired outcome of this goal, the Lucy Covington Leadership House will create an important space to nurture this sense of belonging for American Indian students who often commute great distances from their reservations to be at Eastern Washington University.

### STUDENT SUCCESS AND STUDENT EXPERIENCE

Another important goal is to promote student success and close structural equity gaps through a holistic, people-centered, value-driven approach that prioritizes student well-being in multiple dimensions and supports students' self-exploration and self-understanding of their values, identities, cultural heritages and career paths.

As a facility dedicated to empowering and supporting American Indian students, the Lucy Covington House will be a home for American Indian students and will help them break through the systemic barriers noted above.

**Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not fund the development or acquisition of new or enhanced software or hardware systems or services. This facility will use already established software and hardware platforms that are currently on campus.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

Not applicable for this project.

**How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

The Lucy Covington Leadership House project is designed with strong alignment to state laws and regulations aimed at reducing carbon emissions and improving energy efficiency. Here's how it contributes to meeting the greenhouse gas emissions limits, clean buildings performance standards, and other statewide goals:

**High-Performance Public Buildings (Chapter 39.35D RCW):** The project is committed to high-performance building standards by targeting at least LEED Silver certification, with an ambition to achieve LEED Gold. This aligns with Chapter 39.35D RCW, which promotes environmental stewardship and sustainability in public buildings. Achieving LEED certification involves using energy-efficient systems, such as energy recovery ventilators (ERVs), which enhance indoor air quality while reducing energy consumption. These measures not only lower operating costs but also support occupant productivity and well-being.

**State Efficiency & Environmental Performance Requirements (Executive Order 20-01):** In compliance with Executive Order 20-01, the Lucy Covington Leadership House will be designed to be zero energy or zero energy capable. This includes the use of electrification technologies, such as heat pumps and solar energy systems, to minimize operational carbon emissions. The project will install a solar energy generation system capable of producing at least 7.5 kW of renewable energy, contributing to Washington State's goal of reducing reliance on fossil fuels and enhancing the sustainability of state-owned buildings.

**State Energy Performance Standards for Clean Buildings (RCW 19.27A.210):** Although the project is not bound by RCW 19.27A.210 due to its size (less than 50,000 gross square feet), it is still designed to exceed standard energy performance requirements. The design includes a renewable energy generation system and advanced energy-efficient technologies that align with the spirit of these standards.

**Electric Vehicle Infrastructure (RCW 12.27.540):** While no new parking spaces are required for this project, it will still comply with RCW 19.28 by incorporating electric vehicle charging infrastructure as needed. This infrastructure will meet Level 2 charging capacity requirements, supporting the transition to electric vehicles and reducing overall campus emissions.

**Greenhouse Gas Emissions Reduction Policy (RCW 70.235.070):** The project supports EWU's ambitious greenhouse gas reduction targets by incorporating strategies to minimize both operational and embodied carbon emissions. Using mass timber products, such as cross-laminated timber (CLT), significantly reduces embodied carbon emissions by up to 80% compared to traditional building materials. The project also aligns with EWU's broader goals of achieving a 45% reduction in emissions by 2030, and further reductions by 2040 and 2050. These efforts are part of a comprehensive decarbonization plan that includes transitioning away from fossil fuels, improving energy efficiency, and exploring innovative technologies.

Overall, the Lucy Covington Leadership House project is designed to significantly contribute to state and institutional goals for reducing greenhouse gas emissions, improving energy efficiency, and promoting sustainable building practices.

**How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

### Impact on Equity in the State

The Lucy Covington Leadership House at EWU is a significant project aimed at addressing the inequities faced by American Indian students in higher education. By creating a space dedicated to the empowerment and visibility of American Indian students and Tribal communities, the project seeks to mitigate the historical issue of invisibility that contributes to low enrollment and retention rates among this demographic. The Leadership House will provide academic advising, student services, and a supportive environment, which are crucial for increasing the representation and success of American Indian students in higher education.

**Description**

**Impacted Communities**

• **Demographic Communities:**

- American Indian Students: The project directly impacts American Indian students, who are often underrepresented in higher education. This demographic faces unique barriers, including those related to first-generation status, low income, and systemic marginalization.
- Non-American Indian Students: The project also aims to engage non-American Indian students and the broader community in understanding and addressing the needs of Indigenous peoples, fostering cross-cultural understanding.

• **Geographic Communities:**

- Tribal Communities: The project impacts regional tribes, including the Coeur d'Alene Tribe, Kalispel Tribe, Spokane Tribe Colville Federated Tribes, and other tribes across the state.
- Cheney, Washington: The EWU campus in Cheney will host the Lucy Covington Leadership House, making it a focal point for American Indian students from surrounding tribal lands and reservations who often commute long distances to attend university.

• **Disparities in Impacted Communities**

- The project addresses disparities by focusing on the specific needs of American Indian students in higher education across the nation, who have experienced a decline in enrollment by 40-50% over the past 15years, contrasting with significant growth in other ethnic groups. By providing a dedicated space for cultural and academic support, the Leadership House aims to close the equity gap in higher education for American Indian students. It also aligns with EWU's mission to integrate justice, equity, diversity, and inclusion into its operations, thereby fostering a sense of belonging and promoting student success across all dimensions of their university experience.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay for the generation of solar electricity and has been included on the attached Direct Pay Form

**Is there additional information you would like decision makers to know when evaluating this request?**

Lucy Covington, a pivotal figure in tribal rights and American Indian history, played a crucial role in preserving **tribal sovereignty** and **self-determination** through her leadership. Her legacy continues at EWU with the **Lucy Covington Leadership House**, a project designed to address the **underrepresentation** of American Indian students in higher education. This facility aims to foster a **sense of belonging**, improve **student retention**, and serve as a hub for cultural exchange and academic support. The project aligns with EWU's strategic goals and its commitment to regional tribes, reflecting a broader effort to honor Covington's contributions and promote **cross-cultural understanding**.

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

**Location**

City: Cheney

County: Spokane

Legislative District: 009

## 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

### Description

**Project Type**

New Facilities/Additions (Major Projects)

**Growth Management impacts**

No growth management impacts are associated with this project.

**New Facility:** No

**How does this fit in master plan**

The Master Plan is underway and will be finished in 2025. It will be used to inform this project to make sure the best location is determined.

Enter the average number of hours per week each for (a) classroom seat and (b) classroom lab is expected to be utilized in Fall 2024 for the campus where the project is located.

| (a) General University Classroom Utilization |            | (b) General University Lab Utilization     |             |
|--|------------|--|-------------|
| Fall 2023 Weekly Contact Hours               | 60,425     | Fall 2023 Weekly Contact Hours             | 11,565      |
| Multiply by % FTE Increase Budgeted          | -5.00%     | Multiply by % FTE Increase Budgeted        | -5.00%      |
| Expected Fall 2024 Contact Hours             | 57,404     | Expected Fall 2024 Contact Hours           | 10,987      |
| Expected Fall 2024 Classroom Seats           | 6,415      | Expected Fall 2024 Class Lab Seats         | 996         |
| <b>Expected Hours per Week Utilization</b>   | <b>8.9</b> | <b>Expected Hours per Week Utilization</b> | <b>11.0</b> |
| HECB utilization standard (hours/GUC seat)   | 22.0       | HECB utilization standard (hour/GUL seat)  | 16.0        |
| Difference in utilization standard           | -59.3%     | Difference in utilization standard         | -31.1%      |

If the campus does not meet the 22 hours per classroom seat and/or the 16 hours per class lab HECB utilization standards, describe any institutional plans for achieving the utilization standard.

Eastern Washinton University finds itself in a similar situation as so many other Universities around the nation in a post-pandemic environment. During this time while the focus needs to remain on increasing enrollment, it is vitally important to invest in current facilities so that they continue to serve students, do not fall into disrepair, and are designed to meet future demands, technologies, and teaching pedagogies. In order to achieve this, EWU has embarked on a number of studies to best determine future actions which may range from strategic investment in facilities and/or contracting in others. Some of that work is summarized below.

SRA - In 2022, the University began a Strategic Resource Allocation (SRA) process which entailed a systematic, collaborative, and transparent process to examine the ways resources are being invested. As a regional comprehensive university, it is EWU's goal to ensure that academic programs are best aligned to meet regional workforce needs, and university services aligned in such a manner as to ensure the student experience is meaningful and campus resources are efficient, effective, and sustainable. The process culminated in 2024 and measures are being put into place to make the University as efficient as possible, including physical improvements, consolidation, and/or reductions where facilities are no longer effectively serving the University.

Strategic Planning – Eastern Washington University is in the process of a Strategic Planning effort to guide the direction and growth of Eastern Washington University. By systematically assessing strengths, weaknesses, opportunities, and threats, EWU will articulate a clear vision for the future and establish well-defined goals. This process enables the University to align its resources, expertise, research endeavors, and educational programs effectively.

CCMP – EWU has just started the process to develop a Comprehensive Campus Master Plan (CCMP) to replace the previous plan that was completed in 2014. Recognizing the unique character, current physical and financial conditions, program and space needs, and growth during the past 10 years and projected into the future, the CCMP will be a guiding document to inform decisions for the next 10 years regarding development, growth, consolidation, etc. This document will include and be informed by numerous other studies that are recently completed or underway: SRA, Strategic Plan, Decarbonization Plan, Climate Resiliency and Sustainability, CCMP, Geothermal Studies, Housing Plan, Currently Planned Construction and Renovation Projects, and Predesign Studies.

| 314                             | Staff Offices                 | 120                     | 120           | Y                    |  |
| 410                             | General Study Room            | 25                      | 20-30         | Y                    | Study Lounge                               |
| 610                             | Auditorium/ lecture hall      | 15                      | 15-16         | Y                    |  |
| 620                             | Exhibit                       | 25                      | 30-40         | Y                    |  |
| 630                             | Dining                        | 25                      | 15            | N                    | Non-retail specialty event dining.         |
| 651                             | Nonpublic lounge              |                         |               | N/A                  | Sized appropriately for departmental needs |

Identify the (a) assignable square feet in the proposed facility; (b) the gross square feet; and (c) the net building efficiency (“a” divided by “b”).

**Instructions:**

Provide the facility's condition score (1 superior – 5 marginal functionality) from the 2016 Comparable Framework study, and summarize the major structural and systems conditions that resulted in that score. Provide selected supporting documentation in appendix, and reference them in the body of the proposal.

**Narrative Response:**

N/A

**Instructions:**

Identify the estimated number of additional FTE students the project is expected to enable the institution to serve when the space is fully occupied. Describe the method by which additional FTEs are calculated, including an analysis of probable student enrollment demand from project completion to full occupancy. Also provide an estimate of the number of additional FTE enrollments in high-demand fields and the fields in which such growth is expected to occur.

Per RCW 43.88D.010(1)(a), growth projects must also demonstrate that they can more cost-effectively provide enrollment access than alternatives such as university centers and distance learning.

**Narrative Response:**

Projecting full-time equivalent enrollments for this type of student support center is challenging. Below is a breakdown of the key impacts that will contribute to an increase in enrollment.

The proposed Lucy Covington Leadership House at Eastern Washington University (EWU) will have a significant impact on increasing enrollment and retention rates of American Indian students by addressing the specific challenges this group faces in higher education. Here's an analysis of the key impacts:

**1. Enhanced Sense of Belonging and Cultural Visibility**

- **Increased Enrollment:** By creating a dedicated space that fosters a sense of belonging and cultural pride, the Lucy Covington Leadership House would provide American Indian students with a visible and supportive environment. This may attract prospective students from Indigenous communities who otherwise may not have considered EWU due to feelings of cultural invisibility or a lack of representation. A space that celebrates the life of Lucy Covington and tribal sovereignty could help potential students feel that their heritage and identity are valued.
- **Improved Retention:** The presence of a community hub and resources specifically for American Indian students could improve retention rates by addressing cultural, social, and academic needs. Research shows that students who feel connected to their community and supported by their institution are more likely to persist and complete their education.

**2. Support Services Tailored to Indigenous Students**

- **Academic Support:** The American Indian Student Center, academic advising services, and flexible learning spaces would provide students with the academic resources they need to succeed. Tailored advising and mentorship from faculty who understand the unique challenges faced by Indigenous students can make a substantial difference in helping them navigate the university system.
- **Leadership Development:** The focus on leadership and the legacy of Lucy Covington aligns with cultivating leadership skills in American Indian students, empowering them to take on leadership roles both within their communities and beyond. This aspect may encourage students to enroll at EWU, knowing they will have opportunities to grow both academically and personally in a supportive environment.

**3. Community and Cultural Engagement**

- **Inter-tribal Collaboration:** The facility would serve as a hub for cultural exchange and collaboration among different Indigenous communities, enhancing the educational and cultural experience of American Indian students. This focus on community engagement could further strengthen relationships with local tribes and encourage members of these communities to pursue higher education at EWU.
- **Cultural Celebrations and Exhibitions:** The exhibit hall showcasing Lucy Covington's legacy and other tribal cultures would create opportunities for students to connect with their heritage and share their culture with the broader campus community. This could reduce feelings of isolation and invisibility, which are common barriers for Indigenous students in higher education.

**4. Strategic Alignment with EWU's Goals**

- The project aligns with EWU's strategic plan to promote inclusivity, equity, and student success. By addressing the barriers faced by underrepresented students, specifically American Indian students, the Lucy Covington Leadership House directly supports the university's mission to close equity gaps in education.
- This initiative can serve as a model for other institutions looking to create more inclusive environments for Indigenous students, further enhancing EWU's reputation as a leader in promoting diversity and equity.

**5. Long-term Impact on Campus Diversity**

- **Increased Campus Diversity:** The creation of the Lucy Covington Leadership House could contribute to the overall diversity of EWU's student body. As the university becomes known for its commitment to supporting Indigenous students, it may attract a more diverse student population, which benefits the entire campus by fostering a more inclusive and culturally rich environment.
- **Safer and More Inclusive Campus Environment:** The project's focus on fostering community and reducing the need for ad-hoc interventions will likely lead to a more harmonious and supportive campus, which benefits all students. A safer, more inclusive environment can also contribute to higher retention and satisfaction rates across the student population.

**6. Potential for Program Expansion**

- Although the current project does not include space for expanded programs, it leaves room for future growth, such as instructional areas for American Indian Studies and Salish language programs. This potential for expansion could enhance the academic offerings at EWU, further attracting students interested in Indigenous studies and language preservation.

**Conclusion**

The Lucy Covington Leadership House has the potential to make a transformative impact on enrollment and retention of American Indian students at Eastern Washington University. By addressing the cultural, academic, and community needs of Indigenous students, the project would not only reverse declining enrollment trends but also create a more inclusive and supportive environment that fosters long-term student success. Additionally, it aligns with EWU's broader strategic goals and represents a meaningful investment in both the universities and the students' futures.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

Starting Fiscal Year: 2022

Project Class: Program

Agency Priority: 5

### Project Summary

Eastern Washington University requests funding to construct the proposed Lucy Covington Leadership House, an approximately 15,000-square-foot facility that will serve as a center to support the success of Native American students at the university and beyond. The facility is designed to foster a sense of community and ease students' transition from home to the university setting. It will feature cultural and community gathering areas, event spaces, student collaboration and support spaces, as well as exhibit galleries and performance areas. The project will advance the goals of Eastern Washington University's Lucy Covington Initiative by honoring Lucy Covington's legacy and providing dedicated support for American Indian students, reinforcing the university's commitment to regional tribes.

### Project Description

**What is the problem/opportunity? Identify: priority, underserved people/communities, operating budget savings, public safety improvements & clarifying details. Preservation projects: include information about the current condition of the facility/system.**

The priority of this initiative is to enhance the educational experience for American Indian students at EWU by honoring the legacy of Lucy Covington, a prominent advocate for tribal sovereignty and self-determination. The project seeks to build a space that not only supports the academic and cultural needs of Indigenous students but also serves as a hub for inter-tribal collaboration, cultural exchange, and community engagement. By focusing on these priorities, the Lucy Covington Leadership House aims to create an environment where American Indian students can thrive, develop leadership skills, and connect with their cultural heritage.

In operating budget savings and public safety improvements, the preferred alternative for the Lucy Covington Leadership House represents a strategic investment in physical and cultural infrastructure. The proposed facility, with its focus on student support, community gathering, and cultural exhibitions, will likely lead to long-term savings by reducing the need for ad-hoc support services and interventions that might be required. Moreover, the creation of a space that fosters community and cultural pride can contribute to a safer and more inclusive campus environment, reducing the potential for conflicts and promoting a sense of belonging among all students. The detailed design and planning process, including the consideration of alternative solutions, ensures that the project aligns with EWU's broader strategic goals while maximizing the impact of the available budget.

**What will the request produce or construct (predesign/design of a building, additional space, etc.)? When will the project start/end? Identify if the project can be phased, and if so, which phase is included in the request. Provide detailed cost backup.**

The request will produce the design of the Lucy Covington Leadership House, a new 15,000-square-foot, one-story building at EWU. The facility is intended to support the goals of the Lucy Covington Initiative, focusing on three primary areas: community gathering, student support, and the celebration of Lucy Covington's life and legacy. Key features of the building will include a 300-seat speaking hall, a dedicated American Indian Student Center, a learning commons, a community kitchen and dining area, flexible meeting spaces, and an exhibit hall showcasing the life and cultural contributions of Lucy Covington and other tribal cultures.

The project is scheduled to start with the design phase in November 2026, following the anticipated awarding of design funding in the 2025-27 Capital Budget. If awarded design funding for this coming biennium, construction funds will be requested in the 2027 – 2029 Capital budget with substantial completion expected by November 2028 and ready for occupancy by February 2029. This timeline ensures that the project will be completed efficiently while allowing sufficient time

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

for thorough design and construction processes.

In the future, the project could be expanded in the future to include additional spaces such as instructional program areas for an expanded American Indian Studies program, a Tribal Government program, and a dedicated Salish Language teaching space, as outlined in Alternative 1. However, this expansion would require additional capital and operational funding, which is not part of this request.

The detailed cost breakdown, included in the June 2024 Predesign Report, for the project estimates a total budget of approximately \$20.4 million, with design funding request of \$2.4 million in the 2025-27 Biennium and construction funding request of \$18 million in the 2027-29 Biennium. This budget estimate covers all aspects of the project, from initial design to final construction, ensuring that the Lucy Covington Leadership House will be a fully functional, state-of-the-art facility upon completion.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

By constructing a dedicated space that fosters a sense of belonging, cultural awareness, and support, the project aims to create an inclusive and supportive environment for American Indian students. The preferred alternative, which involves building a 15,000-square-foot facility, is designed to bring together cultural and community gathering spaces, student support areas, and exhibition spaces that celebrate the life and legacy of Lucy Covington and American Indian cultures.

If no action is taken, the EWU strategic goals of increasing dedicated campus infrastructure to support American Indian Students would take longer to put into effect.

The Lucy Covington Leadership House represents a strategic investment that aligns with EWU's broader mission of fostering diversity, equity, and inclusion. The preferred alternative effectively addresses the identified problems by creating a physical space that supports the academic and cultural needs of American Indian students, thereby promoting their success and retention. This facility will serve as a hub for inter-tribal collaboration, cultural exchange, and community engagement, all of which are essential for addressing the historical and ongoing challenges faced by Indigenous students in higher education. The project's detailed planning and consideration of alternatives, such as the potential for future expansion, ensure that the initiative is both impactful and financially sustainable, maximizing the benefits to the university and the American Indian communities it serves.

### What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.

The predesign work included engagement with the Project Steering Committee, American Indian EWU students, and EWU American Indian Studies faculty. These teams considered a range of alternatives to meet the needs identified in Section 02. Alternatives that were evaluated include:

Alternative 1: Preferred Alternative: Lucy Covington Leadership House (~15,000 GSF)

Alternative 2: Full Buildout, Preferred Alternative + Future Expansion (~28,000 GSF)

Alternative 3: No Action

#### **PREFERRED PROGRAM: LUCY COVINGTON LEADERSHIP HOUSE (15,000 GSF)**

The conceptual program for the Preferred Alternative allocates approximately 10,000 net assignable square feet (NASF) for a total of approximately 15,000 gross square feet (GSF), into a single-story facility that supports the project goals described in

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

Section 02, Problem Statement. The proposed Lucy Covington Leadership House brings together cultural/community gathering and event space, student support and collaboration areas, and an exhibit gallery and performance space.

The proposed building concept provides a speaking hall that accommodates up to 300 people for community and cultural events, a learning commons for studying and student collaboration, and an exhibit space featuring the life and legacy of Lucy Covington and American Indian Art and Culture.

Multiple site locations for the project were reviewed as part of the Predesign process, including replacing existing infrastructure (Isle Hall) and a currently vacant site south of Martin and Williamson Hall. The Isle Hall building presents a promising opportunity for the project. Utilizing the Isle site could lead to significant improvements in Campus Energy Use Intensity (EUI) and provide a pathway towards compliance with the Clean Building Performance Standard and HB1390. This aligns with EWU's commitment to sustainability, carbon reduction, and energy efficiency. The forthcoming campus decarbonization and master plan will provide guidance regarding siting optimization and help to determine a final location for the Leadership House. Once the project is funded, further evaluation of this site should be incorporated into the design phase.

The Preferred Alternative achieves many of the project's goals and addresses the identified problem.

### ALTERNATIVE 1: FULL BUILDOUT, PREFERRED ALTERNATIVE + FUTURE EXPANSION (~28,000 GSF)

The full buildout alternative expands the program by about 8,000 NASF for approximately 13,000 additional GSF. The full buildout proposes building the 15,000 GSF Preferred Alternative along with a 13,000 GSF expansion for a total buildout of 28,000 GSF.

In addition to providing cultural/ community gathering and event spaces, student collaboration and support spaces, and exhibit gallery and performance spaces, the full buildout will have instructional program spaces that expand the American Indian Studies program and introduce potential programs such as a Tribal Government program and dedicated Salish Language teaching space. There will be additional classrooms and faculty offices associated with this expansion.

Alternative 1 achieves and expands upon the project's goals. It was not chosen due to the following challenges:

- Requires additional capital funding and therefore would result in a larger capital project funding request.
- Operational funding to expand academic programs as described above has not yet been procured.

### ALTERNATIVE 2: NO ACTION

The No Action Alternative would not address the goals of EWU.

American Indian students would continue to use the existing American Indian Education Center building, which houses the American Indian Studies program, for meetings, studying, and socializing. Dedicated campus infrastructure could become a rate limiting factor as EWU continues to increase programming and support for American Indian students.

Additionally, Alternative 2 - No Action, does not fulfill EWU's strategic mission in the following ways:

- It does not create additional dedicated space on campus for American Indian students and American Indian culture and could become a rate limiting factor in achieving EWU's goals for increasing enrollment of students from the regions numerous Tribal nations.
- It does not fulfill one of the primary purposes of the Memoranda of Understandings between EWU and three Tribal Nations: to construct a longhouse-style facility that enhances recruitment and success of American Indian students.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

The budget request for the Lucy Covington Leadership House primarily impacts American Indian students at EWU, as well as the broader campus community. The proposed facility is designed to address underrepresentation and declining enrollment of American Indian students by providing dedicated spaces that support their cultural, academic, and social needs.

The Preferred Alternative for the Lucy Covington Leadership House includes 15,000 gross square feet (GSF) of space, with approximately 9,690 square feet of assignable area. This facility will feature key program areas, including a Speaking Hall, Learning Commons, dining area with a community kitchen, flexible meeting spaces, and an exhibition gallery celebrating Lucy Covington's life and legacy. These spaces are intended to serve as central hubs for American Indian students, offering a place for community gatherings, academic collaboration, and cultural celebration.

The new facility will significantly enhance the visibility and support for American Indian students on campus by providing a central, accessible location that reflects Indigenous culture. This transformation of campus infrastructure dedicated to American Indian students will not only better accommodate the current student population but also aim to increase enrollment and retention by creating a welcoming and supportive environment.

### Net Assignable Square Feet (NASF)

#### COMMUNITYGATHERING AREAS

Speaking Hall: 5,100 NASF, 52.6% of NASF

#### AMERICANINDIAN STUDENT CENTER

Learning Commons: 1,800 NASF, 18.6%

Dining Area: 1,550 NASF, 16.0%

Flexible Meeting Space: 240 NASF, 2.5%

#### EXHIBITION AREAS

Lucy Covington Life & Legacy Gallery: 1,000 NASF, 10.3%

### Unassignable Square Feet (USF)

#### UNASSIGNABLE AREAS

Learning Commons: 910USF, 6.1% of GSF

Dining Area: 1,200USF, 8.0%

Flexible Meeting Space: 3,200 USF, 21.3%

**Total Building Area** 15,000 (efficiency 65%)

In summary, the Lucy Covington Leadership House will directly impact the American Indian student community at EWU by adding 15,000 GSF of purpose-built space, thereby helping to address the issue of underrepresentation and supporting the university's broader goals of cultural inclusivity and student success.

**Does this project or program leverage non-state funding? If yes, how much by source? If the other funding source requires cost share, also include the minimum state(or other) share of project cost allowable and the supporting citation or documentation.**

This project currently does not leverage non-state funding.

At this time The Lucy Covington Leadership House will be a fully State-funded project.

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

### CONNECTION TO AGENCY MISSION, GOALS & OBJECTIVES

The Lucy Covington Leadership House and Lucy Covington Initiative are part of EWU's strategic plan to increase graduation rates of underrepresented students (including American Indians).

The Lucy Covington Leadership House will support this endeavor through programs and events within the facility intended to boost enrollment and retention of American Indian students.

The Lucy Covington Leadership House aligns with EWU's mission to foster an inclusive, equitable, and transformative learning environment. American Indian students at EWU often encounter barriers to accessing higher education, have a higher risk of dropping out, and lower retention rates compared to other groups. American Indian students have barriers common to first-generation, low-income, and other structurally marginalized students. EWU strives to integrate the principles of justice, equity, diversity and inclusion into all University operations to foster an environment that nurtures a sense of belonging among all members of the community.

### SENSE OF BELONGING

EWU strives to foster a profound sense of belonging, actively promote and sustain equity, dismantle systemic barriers, and embrace the unique perspectives of all individuals. As a desired outcome of this goal, the Lucy Covington Leadership House will create an important space to nurture this sense of belonging for American Indian students who often commute great distances from their reservations to be at Eastern Washington University.

### STUDENT SUCCESS AND STUDENT EXPERIENCE

Another important goal is to promote student success and close structural equity gaps through a holistic, people-centered, value-driven approach that prioritizes student well-being in multiple dimensions and supports students' self-exploration and self-understanding of their values, identities, cultural heritages and career paths.

As a facility dedicated to empowering and supporting American Indian students, the Lucy Covington House will be a home for American Indian students and will help them break through the systemic barriers noted above.

**Does this project include IT related costs, including hardware, software, cloud based services, contracts or staff? If yes, attach IT Addendum.**

This project does not fund the development or acquisition of new or enhanced software or hardware systems or services. This facility will use already established software and hardware platforms that are currently on campus.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 14 Puget Sound Recovery) in the 2025-27 Operating Budget Instructions.**

Not applicable for this project.

**How does this project contribute to meeting the greenhouse gas emissions limits established in RCW 70A.45.050, Clean Buildings performance standards in RCW 19.27A.210, or other statewide goals to reduce carbon pollution and/or improve efficiency?**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

## Description

The Lucy Covington Leadership House project is designed with strong alignment to state laws and regulations aimed at reducing carbon emissions and improving energy efficiency. Here's how it contributes to meeting the greenhouse gas emissions limits, clean buildings performance standards, and other statewide goals:

**High-Performance Public Buildings (Chapter 39.35D RCW):** The project is committed to high-performance building standards by targeting at least LEED Silver certification, with an ambition to achieve LEED Gold. This aligns with Chapter 39.35D RCW, which promotes environmental stewardship and sustainability in public buildings. Achieving LEED certification involves using energy-efficient systems, such as energy recovery ventilators (ERVs), which enhance indoor air quality while reducing energy consumption. These measures not only lower operating costs but also support occupant productivity and well-being.

**State Efficiency & Environmental Performance Requirements (Executive Order 20-01):** In compliance with Executive Order 20-01, the Lucy Covington Leadership House will be designed to be zero energy or zero energy capable. This includes the use of electrification technologies, such as heat pumps and solar energy systems, to minimize operational carbon emissions. The project will install a solar energy generation system capable of producing at least 7.5 kW of renewable energy, contributing to Washington State's goal of reducing reliance on fossil fuels and enhancing the sustainability of state-owned buildings.

**State Energy Performance Standards for Clean Buildings (RCW 19.27A.210):** Although the project is not bound by RCW 19.27A.210 due to its size (less than 50,000 gross square feet), it is still designed to exceed standard energy performance requirements. The design includes a renewable energy generation system and advanced energy-efficient technologies that align with the spirit of these standards.

**Electric Vehicle Infrastructure (RCW 12.27.540):** While no new parking spaces are required for this project, it will still comply with RCW 19.28 by incorporating electric vehicle charging infrastructure as needed. This infrastructure will meet Level 2 charging capacity requirements, supporting the transition to electric vehicles and reducing overall campus emissions.

**Greenhouse Gas Emissions Reduction Policy (RCW 70.235.070):** The project supports EWU's ambitious greenhouse gas reduction targets by incorporating strategies to minimize both operational and embodied carbon emissions. Using mass timber products, such as cross-laminated timber (CLT), significantly reduces embodied carbon emissions by up to 80% compared to traditional building materials. The project also aligns with EWU's broader goals of achieving a 45% reduction in emissions by 2030, and further reductions by 2040 and 2050. These efforts are part of a comprehensive decarbonization plan that includes transitioning away from fossil fuels, improving energy efficiency, and exploring innovative technologies.

Overall, the Lucy Covington Leadership House project is designed to significantly contribute to state and institutional goals for reducing greenhouse gas emissions, improving energy efficiency, and promoting sustainable building practices.

**How does this project impact equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in communities impacted?**

### Impact on Equity in the State

The Lucy Covington Leadership House at EWU is a significant project aimed at addressing the inequities faced by American Indian students in higher education. By creating a space dedicated to the empowerment and visibility of American Indian students and Tribal communities, the project seeks to mitigate the historical issue of invisibility that contributes to low enrollment and retention rates among this demographic. The Leadership House will provide academic advising, student services, and a supportive environment, which are crucial for increasing the representation and success of American Indian students in higher education.

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:45PM

Project Number: 40000071

Project Title: Lucy Covington Center

**Description**

**Impacted Communities**

• **Demographic Communities:**

- American Indian Students: The project directly impacts American Indian students, who are often underrepresented in higher education. This demographic faces unique barriers, including those related to first-generation status, low income, and systemic marginalization.
- Non-American Indian Students: The project also aims to engage non-American Indian students and the broader community in understanding and addressing the needs of Indigenous peoples, fostering cross-cultural understanding.

• **Geographic Communities:**

- Tribal Communities: The project impacts regional tribes, including the Coeur d'Alene Tribe, Kalispel Tribe, Spokane Tribe Colville Federated Tribes, and other tribes across the state.
- Cheney, Washington: The EWU campus in Cheney will host the Lucy Covington Leadership House, making it a focal point for American Indian students from surrounding tribal lands and reservations who often commute long distances to attend university.

• **Disparities in Impacted Communities**

- The project addresses disparities by focusing on the specific needs of American Indian students in higher education across the nation, who have experienced a decline in enrollment by 40-50% over the past 15years, contrasting with significant growth in other ethnic groups. By providing a dedicated space for cultural and academic support, the Leadership House aims to close the equity gap in higher education for American Indian students. It also aligns with EWU's mission to integrate justice, equity, diversity, and inclusion into its operations, thereby fostering a sense of belonging and promoting student success across all dimensions of their university experience.

**Is this project eligible for Direct Pay? If yes, include this project in the Direct Pay Form for inclusion to capital budget request submittal (see Chapter 1.7 of the capital budget instructions for additional instructions).**

This project may be eligible for Direct Pay for the generation of solar electricity and has been included on the attached Direct Pay Form

**Is there additional information you would like decision makers to know when evaluating this request?**

Lucy Covington, a pivotal figure in tribal rights and American Indian history, played a crucial role in preserving **tribal sovereignty** and **self-determination** through her leadership. Her legacy continues at EWU with the **Lucy Covington Leadership House**, a project designed to address the **underrepresentation** of American Indian students in higher education. This facility aims to foster a **sense of belonging**, improve **student retention**, and serve as a hub for cultural exchange and academic support. The project aligns with EWU's strategic goals and its commitment to regional tribes, reflecting a broader effort to honor Covington's contributions and promote **cross-cultural understanding**.

**REAPPROPRIATION: If the project was originally funded prior to the 2021-23 biennium, describe the project and each subproject, including the original appropriation year, status of the project and an explanation why a reappropriation is needed.**

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## Description

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 15

### Project Summary

Minor Works - Program - 057 State Bonded funds - Eastern Washington University is requesting funding in this category to improve academic and student services programmed spaces and buildings. This will allow improved access and better outcomes for students at the university.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Program projects primarily achieve academic and student support goals. This group of projects include updating and improving spaces that are needed to improve program delivery. Included are items that improve access to, and the quality of the program spaces in which instruction takes place.

***Eastern Washington University is requesting \$6,150,000 in this category to address those areas that will increase the life of building system and invest in state facilities. Subprojects consist of Academic Program Enhancements (classroom upgrades), Teaching Laboratory Improvements, Sports and Recreation program upgrades, and Renewal of restrooms in the Communication Building.***

These projects will significantly improve the spaces and their functionality. They also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements. Once staff had captured the needs and budgetary costs to respond, we prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## Description

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issues, and improve the operation conditions of the systems and they provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will scope design and construction implementation many subprojects that will improve campus facilities systems and building. There are no predesign studies required for this level of minor works program projects. These projects reflect the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction having authority requiring addition space.

These projects will start as soon as the appropriations are approved (approximately July 2023) with the intent of completing the project prior to the end of the biennium (June 2025). The areas of construction listed in this request have been prioritized by areas and phase so that if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

The primary goal of program projects is to improve the ability for student instruction and student activity support through renewal of those spaces. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negatively impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The process for developing these projects requests a based up campus and program needs to have improved student outcomes. A variety of considerations are examined to develop the best return on the investment in these areas. Since

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## Description

funding is continually a challenge, the alternate below are considered and we work through the problem solving process.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time. Minor works projects this size do not require a predesign study.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associate with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

**Strategic Plan** – University core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## Description

- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## Description

- > Americans with Disabilities Act - 2010 Design Standards
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

### **How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### **Is there additional information you would like decision makers to know when evaluating this request?**

**Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:**

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

## SubProjects

SubProject Number: 40000139

SubProject Title: Minor Works Program - Academic Support Space Improvements

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 15

### Project Summary

Minor Works Program - Academic Support Space Improvements - This request primarily focus on instruction classroom (FICM 110). The project is to develop of better classroom utilization program and improve those space that need improvement to assist better and more comprehensive class scheduling.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Many of the academic spaces in buildings that have not been renovated in the past 20 years and lack the necessary tools to be effective in a modern university education environment. Deficiencies include inadequate lighting, Heating, Ventilation and Air Conditioning (HVAC) and temperature controls, audio/visual equipment, acoustical treatments, functional furnishings, and upgrading finishes. Selected academic spaces require certain features that were not common or possible in the year that their locations were built, such as marker boards versus chalkboards, video projection systems versus overhead projectors, and Internet-driven computer systems versus photo slides and map displays. Pursuant to the University's goals of providing the highest quality education to its students, these enhancements would change the most updated learning environments on our campus to be state-of-the-art. Not only would it serve our current student population but would also assist in both student and faculty recruitment.

***This request is to improve academic program instructional spaces, 110 Classrooms, on Eastern's Cheney campus. This request is for \$2,000,000.***

The improvements made to the spaces over the years were only of portion of the needs so, many no longer meeting a current standard for safety, operational efficiency, or educational functionality. The building systems needed for state-of-the-art instruction is simply lacking in our classrooms that have not received upgrades in the last decade.

These projects will significantly improve academic instructional spaces and their functionality. The also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

A portion of the project will also evaluate the classroom inventory and campus capacity. Eastern's needs to improve its classroom utilization rates to meet and exceed the state standards. Size, configuration, and quality of the instruction spaces will be evaluated and those spaces that cannot meet the minimums for utilization rates will be remove from the scheduling inventory to be used for other non-academic use. Eastern's facilities are complex and costly resources to maintain and

operate.

These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

### **What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc.**

This will request will scope design and construction implementation many subprojects that will improve campus facilities systems and building. There are no predesign studies required for this level of minor works program projects. These projects reflect the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction have authority requiring addition space.

### **When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Receiving approval of this request would result in the renovation of key academic spaces in a number of buildings on our campus. Many of these improvements would require upgrades to the infrastructure systems serving the buildings that the spaces are located in. Such systems include but not limited to HVAC, electrical, data and telecommunications.

Upon receiving funding approval, programming and design would be conducted to identify the greatest areas of need and the maximum benefits derived from remodeling. Depending upon the results of the studies, designs would be created prior to

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000139

SubProject Title: Minor Works Program - Academic Support Space Improvements

the implementation of construction.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Constructing the necessary improvements would not only correct the deficiencies identified above but would also improve the learning environment to a degree that enhances the academic careers of our students and faculty. Taking no action places our degree programs at a disadvantage in the competition for highly sought-after students and qualified faculty, not to mention that it perpetuates a less-than-optimum learning environment. The primary goal of program projects is to improve the ability for student instruction and student activity support through renewal of those spaces. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. Academic spaces that do not meet minimums for academic instruction degrade the learning environments and reduce the utilization rates for the entire campus. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The process for developing these projects requests are based on campus and program needs to have improved student outcomes. A variety of consideration are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternate below are considered and we work through the problem-solving process.

Program projects primarily achieve a programmatic goal, such as changing or improving an existing space to meet program requirements or creating a new facility or asset through construction. In most cases the systems and equipment addressed in these requests are at the end or past then end of their lifecycle and are in need of upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goal

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000139

SubProject Title: Minor Works Program - Academic Support Space Improvements

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > Americans with Disabilities Act - 2010 Design Standards
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems

### **How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### **Is there additional information you would like decision makers to know when evaluating this request?**

High quality facilities are "key" to positive student outcomes. These project are directly related to improving student outcomes for the university. Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000139

SubProject Title: Minor Works Program - Academic Support Space Improvements

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 15

### Project Summary

Minor Works Program - Teaching Laboratories - FICM 210 Teaching Laboratories provide critical specialty instruction space for labs that support academic programs and degree production. This request will prioritize those areas that need significant improvements to support our academic strategic plan.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Many of the teaching laboratories at Eastern (FICM 210) are lacking the features and infrastructure necessary to support the pedagogical and program needs of the departments they serve. Many of these such facilities were constructed over 40 years ago, more than a generation before the advent of the technology currently available for teaching. Most of our facilities are not even constructed to the standards that the high schools from which our students came from.

Many of these spaces in buildings that have not been renovated in the past 20 years and lack the necessary tools to be effective in a modern university education environment. Deficiencies include inadequate lighting, Heating, Ventilation and Air Conditioning (HVAC) and temperature controls, audio/visual equipment, acoustical treatments, functional furnishings, and upgrading finishes. Selected academic spaces require certain features that were not common or possible in the year that their locations were built, such as marker boards versus chalkboards, video projection systems versus overhead projectors, and Internet-driven computer systems versus photo slides and map displays. Pursuant to the University's goals of providing the highest quality education to its students, these enhancements would change the most updated learning environments on our campus to be state-of-the-art. Not only would it serve our current student population but would also assist in both student and faculty recruitment.

***This request is to improve and upgrade teaching labs (FICM 210) on Eastern's Cheney campus. This request is for \$1,300,000.***

The improvements made to the spaces over the years were piecemeal at best, many no longer meeting a current standard for safety, operational efficiency, or educational functionality. The infrastructure systems needed for state-of-the-art instruction

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000140

SubProject Title: Minor Works Program - Teaching Laboratories

is simply lacking in our classrooms that have not received upgrades in the last decade. This request will be directed to laboratory spaces defined by FICM (Postsecondary Education Facilities Inventory and Classifications Manual) Teaching Laboratory 210.

*A space used primarily for formally or regularly scheduled instruction (including associated mandatory, but non-credit earning laboratories) that require special purpose equipment or a specific space configuration for student participation, experimentation, observation, or practice in and academic discipline. A space is scheduled if the activities generate weekly student contact hours (WSCHs), the activities fulfill course requirements, and/or there is formal convener present.*

These projects will significantly improve academic teaching laboratory spaces and their functionality. Projects also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

A portion of the project will also evaluate the 210-teaching laboratory inventory and campus capacity (Utilization Rates).

Eastern's needs to improve its laboratory utilization rates to meet and exceed the state standards. Size, configuration, and quality of the instruction spaces will be evaluated and those spaces that cannot meet the minimums for utilization rates will be remove from the scheduling inventory to be used for other non-academic use.

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### **Eastern Washington University's Core Themes include:**

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000140

SubProject Title: Minor Works Program - Teaching Laboratories

programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

### What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc.

This will request will scope design and construction implementation of many projects that will improve campus facilities systems and building. These projects reflect the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction have authority requiring addition space.

There are no predesign studies required for this level of minor works program projects.

### When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.

Receiving approval of this request would result in the renovation of key academic spaces in several buildings on our campus. Many of these improvements would require upgrades to the building systems serving the spaces they are located in. Such systems include but not limited to HVAC, electrical, data and telecommunications.

Upon receiving funding approval, studies would be conducted to identify the greatest areas of need and the maximum benefits derived from remodeling. Depending upon the results of the studies, designs would be created prior to the implementation of construction.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

### How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?

Improving the FICM 210 teaching laboratories would greatly aid in our recruitment of both students and faculty, help maintain our accreditations, and enhance the educational experience for all students. Current conditions are deterrent to all those points listed above, the adverse effects of which continue to be greater as the demands for higher technology increase with time.

The result of taking no action will decrease the effectiveness of our instruction, general student spaces to meet our strategic needs, and cause the cause some upgrades related to accessibility and inclusion to not be completed. Some spaces that are deteriorating will continue to do so and their operating costs will continue to rise. This includes regular preventative action as well as demand maintenance. Most of the facilities and space upgrades would include more cost-effective system and

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000140

SubProject Title: Minor Works Program - Teaching Laboratories

equipment upgrades. If this was to be deferred, the level of utility cost reduction that could be achieved wouldn't be attained. Deferring will also impact the ability to provide a safe, comfortable, and accessible campus for all that use it. As is the case with reduction of approved funding, the university will prioritize the highest needed project and defer other as required. In many cases it will be an additional burden on our operation budgets.

Constructing the necessary improvements would not only correct the deficiencies identified above but would also improve the learning environment to a degree that enhances the academic careers of our students and faculty. Taking no action places our degree programs at a disadvantage in the competition for highly sought-after students and qualified faculty, not to mention that it perpetuates a less-than-optimum learning environment. The primary goal of program projects is to improve the ability for student instruction and student activity support through renewal of those spaces. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The process for developing these projects requests is based on campus and program needs to have improved student outcomes. A variety of considerations are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternatives below are considered and we work through the problem-solving process.

Program projects primarily achieve a programmatic goal, such as changing or improving an existing space to meet program requirements or creating a new facility or asset through construction. In most cases the systems and equipment addressed in these requests are at the end or past the end of their lifecycle and need upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluates all alternatives including deferring the projects to a later date. The response is based upon review of many alternatives and proactively addressing the needs of the university and its academic and student-based programs to continue to succeed and meet the goal.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures is not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safety and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000140

SubProject Title: Minor Works Program - Teaching Laboratories

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction in instructional delivery, risk of catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associated with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

**Strategic Plan** – University core themes are listed above.

#### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make sense"

#### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### Is there additional information you would like decision makers to know when evaluating this request?

Minor Works Program projects allow for providing rapid response to programmatic changes and the dynamic needs of the university. While major projects are years in development, these smaller projects offer the opportunity to make changes that positively affect students and the college environment in a shorter time frame. These projects also put in place improvements that will bridge department and programs until major project funding is available.

Good planning, system renewal, and minor capital improvements allow for long term reduction of operating costs, emergency or catastrophic failures and extend the lifecycle of mission critical systems for the university. The university continues to capture and prioritize Minor Works so that when funds become available, we can assign them to projects that are most critical to our operation and complete them in a timely manner. Continual deferring of the critical projects could cause premature, catastrophic, and costly failures. Minor projects reduce the frequency of emergencies and cost less on a long-term basis.

Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### *We ignite change*

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 15

### Project Summary

Minor Works Program - Sports and Recreations Center - This preservation project is to correct energy management deficiencies in the Sport and Recreation Center on Eastern's Cheney Campus.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern Washington University includes an athletic facility known as the Sports and Recreation Center (SRC) as it was constructed in several phases in the late 1960's through the early 70's. The SCR consists of an Aquatics Facility, Jim Thorpe Fieldhouse, P.E. Activities building, P.E. Classroom building and the Pavilion (Reese Court), totaling approximately 305,000 square feet. A substantial portion of the Phase has never undergone any upgrades and still operates with 1960-70's HVAC equipment, electrical lighting, and electrical systems.

EWU's priority request is a significant opportunity to both programmatic space and improve energy performance and reduce both energy costs and emissions. Each building is unique, and only an energy audit can determine the most effective measures to save electricity and gas. EWU is currently performing the energy audit in support of this capital request and the energy modeling is to be completed summer of 2022. EWU is directing emphasis at implementing high performance HVAC, LED Lighting, lighting control systems, building automation, energy management system, utility metering and building envelopes, such as insulation, windows, doors, and roofs.

***EWU is requesting \$2,000,000 for the Programmatic and Energy Improvement for the Sports and Recreation Center. Bringing our buildings current conditions into compliance with the Washington state requirements in energy efficiency, natural gas preservation & reduction of GHG green-house gas emissions is a key strategic goal***

**Problem or opportunity** - This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

SubProject Title: Minor Works Program - Sports and Recreations Center

failure. This is an opportunity for EWU to move in the direction of the university's sustainability goals. Preservation projects maintain, preserve, and extend the life of existing state facilities and assets and do not significantly change the facility and building footprint to address current or anticipated program changes

These projects will significantly improve the spaces and their functionality. They also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

**Operation Budget Savings – Energy Savings.** EWU's priority request for the Phase Energy Savings Improvements project will provide, tenant comfort, HVAC and lighting control, LED lighting, utility and end use metering, energy & systems analytics, energy reporting, HVAC optimization, fault detection & diagnosis, predictive maintenance, reporting, measurement & verification of building efficiencies.

Once staff had captured the needs and budgetary costs to respond, we prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### **Eastern Washington University's Core Themes include:**

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000141

SubProject Title: Minor Works Program - Sports and Recreations Center

Although requested projects are programmatic, in nature, they are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will scope design and construction implementation of HVAC retrofit or replacement, high efficiency LED lighting, lighting controls, building automation systems, energy management systems, modernize buildings envelopes. There are no predesign studies required for this level of minor works projects as EWU is currently conducting an Energy Audit & Building Energy Modeling strategy of the Sports and Recreation facility.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

Not acting in the modernization and integration will affect the reliability of maintaining and monitoring older buildings that have not yet been upgraded and will hinder operations and energy management, moreover EWU's commitment to state regulations compliance, campus efficiency and sustainability goals will not have been met.

This is an opportunity for EWU to move nearer to sustainability commitments, reduce energy consumption and GHG green-house gases. The primary goal of program projects is to improve the ability for student instruction and student activity support through renewal of those spaces. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The process for developing these projects requests based upon building and program needs to have improved student outcomes. A variety of consideration are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternate below are considered and we work through the problem-solving process.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000119

Project Title: Minor Works - Program - 057

## SubProjects

SubProject Number: 40000141

SubProject Title: Minor Works Program - Sports and Recreations Center

extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction in instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

Minor works projects this size do not require a predesign study.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University core themes are listed above.

**Facilities Master Plan 2014 - Objectives**

## SubProjects

**SubProject Number: 40000141**

**SubProject Title: Minor Works Program - Sports and Recreations Center**

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their

effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > Americans with Disabilities Act (ADA) - 2010 Design Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

High quality facilities are "key" to positive student outcomes. These project are directly related to improving student outcomes for the university. Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## Description

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 16

### Project Summary

Minor Works - Program - 061 - Local Capital funds - Eastern Washington University is requesting the use of local capital funds to make improvement and renewals and academic and student support areas of the Cheney Campus.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Program projects primarily achieve academic and student support goals. This group of projects include updating and improving spaces that are needed to improve program delivery. Included are items that improve access to and the quality of the program spaces in which instruction takes place.

***Eastern Washington University is requesting \$6,000,000 in this category to address those areas that will increase the life of building system and invest in state facilities. Subprojects consist of Campus Americans with Disabilities Act (ADA) improvments, Classroom Technology Upgrades, Emergent needs and Program Remodels.***

These projects will significantly improve the spaces and their functionality. The also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. Projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

Once staff had captured the needs and budgetary costs to respond, we prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## Description

quality, student-centered education to a diverse population of almost 11,000 students. Almost 35% of the student population is first-generation university students and almost 32% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issues, and improve the operation conditions of the systems and therefore provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request will scope design and construction implementation for many projects that will improve campus facilities systems and buildings. There are no predesign studies required for this level of minor works program projects. These projects reflect the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction having authority requiring addition space.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so that if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design is undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

The primary goal of program projects is to improve student outcomes by improving instructional and student activity spaces by renewal. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority.

As is objectively the case, to not take actions will continue the degradation of systems and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university students and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negatively impact university offerings and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The process for developing these projects requests a based-up campus and program needs to have improved student outcomes. A variety of considerations are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternatives below are considered and we work through the problem-solving process.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## Description

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

### **Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

### **Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

### **Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University core themes are listed above.

### **Facilities Master Plan 2014 - Objectives**

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## Description

- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)

No.

### Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.

No.

### If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.

This project is not linked to the Puget Sound Action Agenda.

### Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > Americans with Disabilities Act (ADA) - 2010 Design Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems

### **How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### **Is there additional information you would like decision makers to know when evaluating this request?**

High quality facilities are "key" to positive student outcomes. Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

## SubProjects

SubProject Number: 40000202

SubProject Title: Minor Works Program - Classroom Improvements

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 16

### Project Summary

Minor Works Program - Classroom Renewal - High quality student outcomes are enhance by high quality instructional and programmatic spaces. This request is to renew and update program spaces provide the best "access" to our students to meet our strategic goals.

### Project Description

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

High quality instructional space are necessary for modern student instruction. Some of our auditorium style classrooms were upgraded in the late 1990s. Although they included many new electronic features, they have all fallen out of date because of the rapid evolution of the technology equipment industry. Other classroom issues also need improving and renovation such as lighting, sound attenuation, furnishings, flooring, and classroom specialties. To keep pace with the changes of our times, Eastern must constantly be changing the amenities offered in our classrooms. A great number of students come from high schools whose classrooms are better equipped than those at our university. The academic success of our students is, in many ways, tied to the facilities they are instructed in. This is never truer than in the area of technology.

***This request is to design, improve and remodel existing classroom technology on Eastern's Cheney campus. This request is for \$1,000,000.***

This request is a priority due to the significant percentage of our classrooms that still have antiquated technology such as old projectors, overhead projectors mounted on carts utilizing wall-mounted pulldown projector screens. Room lighting, lighting controls, acoustics, HVAC. This all factors into the equation when designing spaces for modern technology. These deficiencies are intended to be addressed as well as purchasing and installing new equipment. Other amenities such as surface finishes, flooring, acoustical treatment and window treatment would be addressed as the budget allows.

These projects will significantly improve the spaces and their functionality. The also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations.

Projects were identified through evaluation of our current systems by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

Once staff had captured the needs and budgetary costs to respond, we prioritized these projects to improve and extend the lifecycle of our systems and equipment and to reduce the maintenance and operating cost for the university.

# 370 - Eastern Washington University Capital Project Request

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000202

SubProject Title: Minor Works Program - Classroom Improvements

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### **Eastern Washington University's Core Themes include:**

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Following a survey of our existing facilities, we have gone through classrooms having the greatest priority for improvement and in the greatest need of deficiencies to correct. These spaces will be remodeled and retrofitted to utilize state-of-the-art instructional technology. Classroom equipment, infrastructure upgrades, and furnishings systems will comprise the majority of the project.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

SubProject Title: Minor Works Program - Classroom Improvements

Technology is a substantial component of the current higher education learning environment. The university must keep pace with the educational market to recruit and retain quality students for programs and degrees. Without implementing these improvements Eastern will lose the opportunity for high degree production, reduce time to degree completion and have impacts to our enrollment.

System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluates all alternatives including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goal of our strategic plans.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

The process for developing these projects requests a based up campus and program needs to have improved student outcomes. A variety of consideration are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternate below are considered and we work through the problem solving process.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. - > Americans with Disabilities Act (ADA) - 2010 Design Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

SubProject Title: Minor Works Program - Classroom Improvements

### Is there additional information you would like decision makers to know when evaluating this request?

High quality facilities are "key" to positive student outcomes. Eastern encourages student to explore their futures through experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 16

### Project Summary

Minor Work Program - Emergent Needs - These are projects that are emergency in nature or that surface with opportunities to be dynamic and flexible in supporting items that appear but that are not forecasted.

### Project Description

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000204

SubProject Title: Minor Work Program - Emergent Needs

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

This request addresses the situations where university needs arise that are unanticipated and unforeseen. Every biennium, careful planning and consideration goes into each request for funding but the dynamics of managing the entire campuses facilities cannot account for those needs that arise sometimes past the time of capital requests. Looking back at each of the past five biennia, Eastern Washington University has found itself in situations where needs arise that were not foreseen. Often the needs do not align with specific requested minor work funds, but the opportunity is critical to take advantage of. The other item is the fact that unforeseen catastrophic conditions impact the university and one or more of its facilities that needs to be addressed to continue normal operations. Those are the type of projects that fall under Emergent Need.

***This request is for Emergent and non-planned needs on Eastern's Cheney campus. This request is for \$1,500,000.***

In other instances, there have been shifts in instructional programs that require minor remodeling. In modern languages, for example, there was a recent change from audio cassette learning stations to computer-driven systems. Where the change was obviously beneficial to the programs initiating it, it placed an undue burden on our facilities infrastructure that required significant additions and alterations to accommodate.

Even though these issues are unplanned they still significantly improve the spaces and their functionality or respond to emergency situations. The also address compliance issues that are required due to the age of these facilities. The responses are priority based identification of on-going needs, review and prioritization of campus programs and the needs to support academic instruction and university operations. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces.

Once staff had captured the needs and budgetary costs to respond, we would assign emergent need resources to the project and move ahead to repair or construction implementation.

Eastern's facilities are complex and costly resources to maintain and operate. These program request enhance facilities and allow us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

### ***Eastern Washington University's Core Themes include:***

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000204

SubProject Title: Minor Work Program - Emergent Needs

college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature, once identified, they will be developed and a designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

Where these changes are unforeseen, specific details of what will be produced cannot be given. What can be anticipated is that these needs will arise and there will need to be funds in place to meet them. The projects that we would address sometimes surface in between the time of our request and the start of the biennium giving the University time to structure a plan for execution. Phasing will be a matter of the number and types of projects the University will undergo. It is not likely that the entire requested amount will go towards a single project (although there is always that potential). It is most likely that several projects will be addressed in this category and will be constructed across the entire time span of the 2023-2025 biennium.

This will request will scope design and construction implementation many subprojects that will improve campus facilities systems and building. There are no predesign studies required for this level of minor works program projects. These projects reflect the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction have authority requiring addition space.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction will be identified and prioritized and phased so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

By funding these types of program contingencies, the University is positioned to meet the changing needs of our educational and support departments. It enables us to keep pace with emerging technologies, pedagogical shifts, increasing enrollments, and successes in marketing. It would avoid the situation where opportunities to support the University's mission and to enhance the education experience would be missed or delayed due to lack of funding.

The results of not acting on these items increase emergency funding required for catastrophic system failures and continue to raise the cost of regular maintenance on critical systems and equipment. The primary goal of program projects is to improve the ability for student instruction and student activity support through renewal of those spaces. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000204

SubProject Title: Minor Work Program - Emergent Needs

leadership priority.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Emergent program needs are non-planned and unforeseen projects that occur after priorities are set and detailed project requests are already requested. Even so when these needs emerge the university still would review the alternates and make the best decision for use of the resources allowed.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

Alternative 4) Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

Although evaluated at the time alternative 5 would be the likely response to keep operations open and working and to balance high capital costs, potential reduction is instructional delivery, risking catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

**Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.**

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

**Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?**

There are not matching federal, state, local or private funds associate with this request.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000204

SubProject Title: Minor Work Program - Emergent Needs

**Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.**

**Strategic Plan** – University core themes are listed above.

### Facilities Master Plan 2014 - Objectives

- 1) Represent the “DNA of EWU”—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that “feels like home” for EWU student
- 5) Coordinate with funding— “the plan must make sense”

### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern’s commitment to reduction of the campus carbon footprint, reducing energy costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.
- 4) Improve the overall character of the campus with the implementation of each project.
- 5) Create and follow a framework that welcomes EWU’s neighbors and accommodates future campus expansion beyond existing boundaries.
- 6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

### **For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

### **Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

### **Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

### **If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

### **Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes,**

## SubProjects

SubProject Number: 40000204

SubProject Title: Minor Work Program - Emergent Needs

**please elaborate.**

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > Americans with Disabilities Act (ADA) - 2010 Design Standards
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both demographic and geographic communities. How are disparities in the communities impacted?**

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

**Is there additional information you would like decision makers to know when evaluating this request?**

Quality buildings and spaces are critical to provide positive outcomes for Eastern students. Emerging needs are a fact of operating a facility like Eastern Washington University. Having the ability to respond quickly to minor equipment and systems failures responds to the students needs to instruction and keeps the university from disruption their educational journey.

Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in preparing students, improving completion rate and building community.

Starting Fiscal Year: 2026

Project Class: Program

Agency Priority: 16

### **Project Summary**

Minor Work Program - Program Remodels - Academic spaces that support degree production and higher graduation rates are as critical. This request is for improvements to those programmatic spaces to support the university strategic plan.

### **Project Description**

**Identify the problem or opportunity addressed. Why is the request a priority? This narrative should identify unserved/underserved people or communities, operating budget savings, public safety improvements or other backup necessary to understand the need for the request. For preservation projects, it is helpful to include information about the current condition of the facility or system.**

Eastern Washington University runs over 50 academic related programs each year. Because of new pedagogical means, methods and technologies, changes are necessary in several programs. In the cases where the requirements for accreditation change due to new methods of instruction or new findings based on recent research, remodeling of program space is necessary to maintain our accreditations and certifications. Classroom (FICM 110) and Teaching Labs (FICM 210) are addressed on other requests. These area are related to student research, generals non-class and laboratory functions,

## SubProjects

SubProject Number: 40000205

SubProject Title: Minor Work Program - Program Remodels

meeting and offices spaces that provide access to university students.

***This request is to improve and renovate Programmatic Space on Eastern's Cheney campus. This request is for \$1,500,000.***

Keeping pace with peer institutions by offering programs that are on par with the higher education standards makes this request a high priority. In most cases, the students served are upperclassman close to achieving undergraduate degrees. In the programs involving engineering and technology, specialized equipment, and the infrastructure necessary to support it is ever-changing. These programs affect a large percentage of our student population pursuing degrees in those areas. In most cases these programmatic updates are in old buildings that are not slated for major upgrades for many years. Academic buildings identified are Kingston Hall, Showalter Hall, Isle Hall, Cheney Hall and Cadet Hall.

### Current Facilities Condition Assessment (FCA)

- 1 - Superior
- 2 - Adequate
- 3 - Fair; System approaching end of expected lifecycle
- 4 - Needs Improvement, Limited Functionality
- 5 - Needs Improvement, Marginal Functionality

### Buildings under consideration

Cadet Hall – Overall 2.7; Services 3.8; HVAC/Controls 4 ;Fire Protection 5; Electrical 4  
 Cheney Hall – Overall 2.6; Services 3.0; HVAC/controls 3.5 ;Fire Protection 5; Electrical 3  
 Isle Hall – Overall 3.4; Services 3.7; HVAC/controls 4; Fire Protection 4.5; Electrical 4  
 Kingston Hall – Overall 2.5; Services 3.1; HVAC/controls 3.75; Fire Protection 4; Electrical 3  
 Showalter Hall – Overall 2.6; Services 3.6; HVAC/controls 4; Fire Protection 3; Electrical 4

These projects will significantly improve the program spaces and their functionality. They also address compliance issues that are required due to the age of these facilities. The requests are priority based upon on-going assessment, review and prioritization of campus programs and the needs to support academic instruction and university operations. Projects were identified through evaluation of our current spaces by architectural engineering consultants, academic program departments and plant staff. From these assessments, we compiled a list of projects and budgetary estimated costs for review and approval. These projects are the highest priority to align facilities improvement with the current and future needs of departments and general campus spaces. In most cases, the evaluation of these requests shows the deteriorating condition of some of the spaces, systems, and equipment and how the backlog of accessibility requirements that need to be in place in our public facilities. We captured the costs to maintain and operate these facilities through our computerized maintenance management systems (CMMS) and identify those that have the highest need for improvements.

Eastern's facilities are complex and costly resources to maintain and operate. These program enhancing projects enable us to defer major capital expenditures through creative preservation measures that extend the lifecycle of our facilities and systems. We work continually to find innovative ways to maintain our facilities and manage the long-term costs of the university and state. We designed these projects to respond to the programs' student and staff needs and their ability to be maintained at a cost-effective level. These types of projects allow us to meet programmatic and current code need without major project resources.

***Eastern Washington University's Core Themes include:***

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000205

SubProject Title: Minor Work Program - Program Remodels

**Access** - EWU strives to provide the opportunity for traditional college-bound students, non-traditional students, and students from underserved populations in the Inland Northwest and beyond to obtain a high-quality education and earn a marketable degree.

**Learning** - EWU strives to equip students with the skills and knowledge needed for them to be informed citizens of the world and successful in their chosen careers.

**Completion** - EWU strives to support our students to earn undergraduate and graduate degrees. EWU provides a high quality, student-centered education to a diverse population of over 12,000 students. Almost half of the student population is first-generation university students and 31% of students are from historically underrepresented ethnic backgrounds.

Eastern enhances access to higher education in the Inland Northwest and beyond by recruiting and supporting traditional college-bound students, non-traditional students and those from underserved populations; Delivering high-quality academic programs that undergo regular, rigorous review informed by data and assessment of student learning; Delivering a high-quality co-curriculum designed to develop the intellectual, cultural, personal and practical aspects of students' lives; and Promoting student success by supporting student engagement and timely degree completion.

Although requested projects are programmatic, in nature they are additionally developed and designed to address reductions in energy and operation costs, bring systems to current building code compliance, reduce any pending safety and compliance issue, and improve the operation conditions of the systems and there provide high quality instructional, research and student engagement areas on the university campus.

**What will the request produce or construct (i.e., predesign or design of a building, construction of additional space, etc. When will the project start and be completed? Identify whether the project can be phased, and if so, which phase is included in the request. Be prepared to provide detailed cost backup.**

This request supports the design and construction of the renewal existing academic and program support spaces for new and renovated space intended to enhance specific academic programs. Where the individual projects have yet to be identified, in detail, each biennium department provide more requests than the funding levels can support. The amount of our request is the approximate average of several past biennium's requests.

This will request will scope design and construction implementation many subprojects that will improve campus facilities systems and building. There are no predesign studies required for this level of minor works program projects. These projects reflect the need of upgrading existing spaces, equipment, or systems to extend the useful lifecycle of portions of or the entire facility. In most cases the only new square feet added would be determined by local jurisdiction have authority requiring addition space.

The project will start as soon as the appropriations are approved (approximately July 2025) with the intent of completing the project prior to the end of the biennium (June 2027). The areas of construction listed in this request have been prioritized by areas and phase so the if approved funding is less than requested a portion or smaller scope can be accomplished with resources approved. All minor works projects are structured to be completed in this manner. Current estimates are based upon unit and historic square foot cost of design and construction. A detail budget for each area or project will be developed when design in undertaken and that information is available for review as necessary.

**How would the request address the problem or opportunity identified in question 1? What would be the result of not taking action?**

As needs arise, this request would enable the University to respond to those needs on a case-by-case basis, upholding our commitment to quality education through our course offerings and special programs. In some cases, it would result in

# 370 - Eastern Washington University Capital Project Request

SubProject Title: Minor Work Program - Program Remodels

remodeling space, in other cases providing the infrastructure necessary to support new equipment sometimes obtained through outside funding sources (i.e., grants, donations, etc.).

The primary goal of program projects is to improve the ability for student instruction and student activity support through renewal of those spaces. Better delivery methods and quality spaces result in better student outcomes. These outcomes are part of our strategic plan and university leadership priority.

As is objectively the case, to not take actions will continue the degradation system and building conditions and operations. The costs for operations, including energy costs will continue to increase. Systems that can exceed their designed lifecycle become prime candidates for catastrophic failures that can substantially impact university student and staff. Strategic planning for upgrades, improvements and replacements can avoid many problems that negative impact university offering and operating costs.

**What alternatives were explored? Why was the recommended alternative chosen? Be prepared to provide detailed cost backup. If this project has an associated predesign, please summarize the alternatives the predesign considered.**

Program projects achieve a programmatic goal, such as changing or improving an existing space to meet program requirements or creating a new facility or asset through construction. In most cases the systems and equipment addressed in these requests are at the end or past then end of their lifecycle and need upgrading or replacement. System and equipment failure is not a productive alternative. Continuing to apply restricted operating funds to failing equipment and systems is not good use of state resources. Other more cost-effective alternatives are always considered due to the lack of available resources. The university evaluate all alternative including deferring the projects to a later date. The analysis is based upon the needs of the university and its academic and student-based programs to continue to succeed and meet the goal of our strategic plan.

The process for developing these projects requests is based upon campus and program needs to have improved student outcomes. A variety of consideration are examined to develop the best return on the investment in these areas. Since funding is continually a challenge, the alternate below are considered and we work through the problem-solving process.

**Alternative 1)** Renovation of the entire facility- major project renovation. The goal of minor works projects like these are to extend building and systems lifecycles so that major project with major cost is not necessary now. Also, if systems in the facilities have lifecycle left it is more cost effective to preserve the system with value rather than demolish them in a major renovation. This is good stewardship of state assets and resources.

**Alternative 2)** Defer the work – Deferring the work can mitigate capital costs, but older less efficient system and facilities cost more to operate and maintain than newer more efficient facilities. There is also risk of catastrophic breakdowns or failures that could cause other high-cost damage.

**Alternative 3)** Taking the space or system off-line until funding is available. – The spaces/system listed in this request are high priority in nature to the safety, security, and operations of this institute of higher education. In most cases shutting down parts of structures in not an alternative to the university.

**Alternative 4)** Do nothing – This alternative is the worst-case scenario because it combines the downside of items 2 and 3. Space is not available, can become unusable, may be a safe and security issue or failure could cause more damage to other system and building operations.

**Alternative 5)** Renewal or replacement of a portion of the system or facility. This alternative is selected because it meets the short term needs of the students and the university, it will increase the life expectancy of systems and equipment in this facility, reduce cost of maintenance, reduce the cost of energy by replacing equipment with higher efficiency equipment. This alternative meets the needs and intent of minor works projects.

# 370 - Eastern Washington University Capital Project Request

2025-27 Biennium

\*

Version: 24 EWU Capital Budget

Report Number: CBS002

Date Run: 9/10/2024 12:46PM

Project Number: 40000201

Project Title: Minor Works: Program 061 2025-27

## SubProjects

SubProject Number: 40000205

SubProject Title: Minor Work Program - Program Remodels

Alternative number 5 has been considered and will proceed as the best-case scenario to balance high capital costs, potential reduction in instructional delivery, risk of catastrophic failure and increasing the value and lifecycle of university facilities.

At this point in the planning process the budgets have been established on historical cost per square foot analysis. More detailed programming and budget modeling will be completed when funding is approved. Those detail budgets will be available for review at that time.

### Which clientele would be impacted by the budget request? Where and how many units would be added, people or communities served, etc.

This budget request would most likely provide a positive impact to our upper-level courses that utilize special spaces and equipment in Kingston Hall, Communications, Art, Theatre, Digital Media, Music, Cadet and Cheney Hall.

Programs such as math, engineering, technology, fine arts, modern languages, and physical education are heavily dependent upon uniquely equipped facilities.

This project serves the university community. That include our customers, students, as well as the faculty and staff that serve the student on their scholastic career. Because Eastern is a public university our campus also supports the local and region community. As stated under the problem or opportunity to be addressed, the university core themes are improved, and we improve our facilities. Since these projects are improvements, replacement, and upgrades there would be no new units added but the opportunities for growth and increasing the access for people will increase.

### Will other funding be used to complete the project? How much, what fund source, and could the request result in matching federal, state, local or private funds?

There are not matching federal, state, local or private funds associated with this request.

### Describe how this project supports the agency's strategic master plan or would improve agency performance. Reference feasibility studies, master plans, space programming and other analyses as appropriate.

**Strategic Plan** – University core themes are listed above.

#### Facilities Master Plan 2014 - Objectives

- 1) Represent the "DNA of EWU"—supporting student access, opportunity, and personal transformation
- 2) Be flexible—able to respond to changes in technology, pedagogy, and student demographics
- 3) Align facilities with academic purpose and need
- 4) Promote a campus environment that "feels like home" for EWU student
- 5) Coordinate with funding—"the plan must make sense"

#### Facilities Planning Principles

The analysis of the campus, past planning studies, and input from EWU students, faculty, and staff identified the following principles to guide the master plan:

- 1) Carefully evaluate each project regarding renovation vs. replacement opportunities.
- 2) Plan and implement to optimize utilization and efficiency of buildings/facilities square footage.
- 3) All projects, major or minor reflect Eastern's commitment to reduction of the campus carbon footprint, reducing energy

costs, reducing maintenance and operations commitments, and increasing the lifecycle of related systems and of the facility in its entirety.

4) Improve the overall character of the campus with the implementation of each project.

5) Create and follow a framework that welcomes EWU's neighbors and accommodates future campus expansion beyond existing boundaries.

6) Reinforce and improve the overall cohesion of campus, specifically linkages across campus.

**For IT-related costs: Does this project fund the development or acquisition of a new or enhanced software or hardware system or service?**

This project does not fund the development or acquisition of new or enhanced software or hardware system or service. This facility will use already established software and hardware platforms on campus.

**Does this decision package (DP) fund the acquisition or enhancements of any agency data centers? (See OCIO Policy 184 for definition.)**

No.

**Does this DP fund the continuation of a project that is, or will be, under OCIO oversight? (See OCIO Policy 121.) If the answer to any of these questions is yes, continue to the IT Addendum and follow the directions to meet the requirement for OCIO review.**

No.

**If the project is linked to the Puget Sound Action Agenda, describe the impacts on the Action Agenda, including expenditure and FTE detail. See Chapter 12 (Puget Sound Recovery) in the 2011-21 Operating Budget Instructions.**

This project is not linked to the Puget Sound Action Agenda.

**Does this project contribute to statewide goals to reduce carbon pollution and/or improve energy efficiency? If yes, please elaborate.**

Yes, when systems or equipment is upgraded, Eastern addresses the efficiency of the new equipment or system upgrades to reduce carbon emissions, conserve energy, and reduce overall operating costs. Planning and design for these projects will meet or exceed current Washington State Energy Code WAC 51-11C. We also review design and implementation against our Climate Action Plan and Washington State requirements for reduction of greenhouse gas emissions RCW 70.235.

This project is designed to address the necessary replacement of infrastructure systems and components that are past their effective lifecycle, are costly to operate because of age and technology, and are at risk of failure. Completion of these projects will update compliance with a variety of state and local jurisdictional requirements including:

- > House Bill 1257 Clean Building Act
- > State of Washington Energy Code
- > RCW 39.35D High Performance Public Buildings – high efficiency components and systems
- > RCW 43.19.668; 669; 670; 682 Energy Conservation – high efficiency components and systems
- > EWU Energy Efficiency Sustainability Report
- > EWU Climate Action Plan
- > EWU Campus Infrastructure Renewal Plan
- > Americans with Disabilities Act (ADA) 2010 version

**How is your proposal impacting equity in the state? Which communities are impacted by this proposal? Include both**

### demographic and geographic communities. How are disparities in the communities impacted?

At Eastern Washington University, we are committed to a campus climate that welcomes and respects diversity. These efforts are championed by our campus leadership and the Office for Diversity and Inclusion. EWU is a microcosm of society reflecting diversity of people, ideas, beliefs, and philosophies.

Expanding opportunity for all students by providing critical access to first generation students, underserved populations, place-bound students, and other students who may not have the opportunity for higher education. We are especially committed to educating first-generation college students and those from underserved communities. One of our strategic planning initiatives is to work toward the federal designation of a Hispanic Serving Institution (HSI). For an institution to qualify as an HSI, it must have at least a 25% Latinx/Hispanic student population. Our strategic goal is to be designated an HSI by 2023.

### Is there additional information you would like decision makers to know when evaluating this request?

High quality program and support spaces are critical to exception outcomes for our students. Eastern encourages student to explore their futures though experimental, multidisciplinary, impact-oriented learning. Student outcomes are clearly a response to the strategy of:

#### ***We ignite change***

Eastern Washington University engages a diversity of students and ignites generational transformation. We inspire students through engaged learning experiences that encourage pathways to graduation. We collaborate with families, employers, and communities to solve complex issues and improve quality of life. Created as the public higher education institution for this region, EWU is committed to meeting current and emerging needs. We recognize the evolution of our communities, and we lead collaborative efforts for sustainable growth and development.

#### ***We embrace equity and social justice***

We are recognized as a model diversity-serving institution. We embrace changing demographics and changing societal needs. Through culturally responsive curricula and campus activities, we work tirelessly to promote understanding and reduce disparity and inequity. Communities flourish when multiple perspectives converge to create a powerful vision for all. EWU fosters a campus life that is vibrant, welcoming, and supportive of all. We provide opportunities for open thought and dialogue. As the state's premier public diversity-serving institution, we are committed to catalyzing an equitable and inclusive climate on our campuses and in our communities.

#### ***We drive innovation***

We invest in the faculty and staff—as well as the tools, resources, and opportunities—that promote interdisciplinary collaboration and innovative instruction. We celebrate faculty and staff who make extraordinary contributions to our students and our mission. EWU drives the change that promotes social and technological advancement, environmental and economic sustainability, and community health. Our curricula and our collaborations are designed strategically to create a prosperous future.

#### ***We transform our Region***

We develop curricula that meet changing needs of students, employers, and communities. We commit to applied research and community partnerships that engage and inspire while preparing students for success after graduation. We develop the professional workforce and strengthen our economy through strategic and creative programming.

Eastern's curricula and experiences inspire and engage. The facilities on the Cheney campus are a key component in

**January 08, 2024**

**FINAL REPORT**

# Background

## PURPOSE

This report provides the technical, economic, environmental and regulatory assessment of utilizing the existing Grande Ronde aquifer, present deep below the Eastern Washington University campus in Cheney, WA, for the feasibility and economic viability of converting the university’s district heating and cooling system to Ground-Source based Heat Pump systems (GSHPs).

## GOAL

The primary goal of this report is to provide EWU with information on one possible pathway to reducing fossil fuel use at the existing campus central heating (and cooling) plant, with the ultimate goal of achieving an Energy Efficient, Zero-Carbon campus.

## “HYDRO-GEOLOGICAL” vs “GEOTHERMAL” ASSESSMENT

### What’s the difference?

The primary distinction between the term “hydro-geological” and “geothermal” is mostly semantics, in that, even though more commonly used in these sorts of studies, the term “geothermal” suggests fairly warm, if not very hot, ground water is present and available. The term “thermal”, suggests abundant heat from the earth for direct heating of buildings (or electric generation) is possible. This, however, is not normally the case, except in certain special and isolated areas, such as Yellowstone Park, areas of California and some other select areas in the West, as well as certain parts of Iceland, Indonesia and the Philippines. Most of these readily available geothermal sources have already been identified and utilized to produce fossil fuel free heating or electrical generation, or both. In the case of EWU, there is really no geothermal, meaning very hot, ground water present or available, which, if it were, would make the transition away from traditional fossil fuel based heating, much more economically viable.

So, for the purposes of this report, the more appropriate term that will be used is “hydro-geological” assessment. As such it will be looking at the availability of, and characteristics of, the existing aquifer (hydro) ground (geological) water that is present in the earth beneath the EWU campus. The feasibility of using this ground water for the purpose of heating and/or cooling the EWU campus buildings, as this aquifer acts as a heat-source or heat-sink for efficient operation of ground-source heat pump systems, will be analyzed in detail.

# Background

## WHAT IS A GROUND-SOURCE HEAT PUMP SYSTEM?

A ground-source heat pump system is an electric energy based heating and cooling system, rather than a fossil fuel based system, that uses the earth as a source of stable “energy” for extracting or rejecting heat to (i.e. heat sink or heat source), for the purpose of heating or cooling buildings. Although there are other possible heat pump based systems that utilize the ambient outdoor air, rather than the earth, as the heat source or heat sink, using the earth is considered more efficient, since the thermal mass is much more dense than air, and the typical 50 to 60 deg. F ground temperatures are also more stable than the air, which can vary well over 100 deg. F throughout the seasons.

## WHY STUDY A GROUND-SOURCE HEAT PUMP SYSTEM?

Because ground-source heat pump systems are powered by electricity, and are considered highly efficient, more so than alternative air-source type heat pumps, they can greatly reduce or eliminate completely, the combustion of fossil fuels on site for the purpose of heating buildings. This, therefore, allows for a potential significant reduction in the emission of greenhouse gases (GHGs) at the campus level.

## WHAT IS THE DIFFERENCE BETWEEN OPEN-LOOP AND CLOSED-LOOP WELLS?

Closed-loop heat pump systems circulate water through buried piping to exchange heat with the ground, whereas open-loop type systems pump water directly in and out of the earth, from an available aquifer source. The nature of heat transfer requires closed-loop type systems to utilize a significant number of expensive vertical wells, or large open fields for shallow horizontal loops, whereas open-loop type systems, which use water directly, instead of relying on heat transfer to the earth, only required a few wells. This allows for an economy of both scale and space constraints, especially in the context of a college campus, where open space for multiple wells or heat transfer fields is extremely limited.

Horizontal configuration of a ground-coupled heat pump system

Configuration of a groundwater heat pump system

Vertical configuration of a ground-coupled heat pump system

# Process and Findings

---

## ASSESSMENT PROCESS

- The groundwater aquifer below the EWU campus, was investigated and characterized by the consulting firms of Landau Associates and WNR Group, Inc, with hydrogeologists having expertise and experience in the nature of Eastern Washington aquifers and water rights.
- Existing literature, available aquifer testing data, and well logs from the Cheney area were used to develop estimates of the aquifer properties, potential well yield, and preliminary well design.
- Based on three theoretical well water use scenarios for the campus GSHP systems, the viability of water extraction and reinjection was estimated, along with possible thermal degradation/migration impacts, in order to establish reasonable well sizes, depths, spacing and pumping requirements.
- The complete and detailed Hydro-Geological Assessment can be found in the Appendix of this report:
  - *Eastern Washington University Ground Source Heat Pump Evaluation, by Landau Associates and WNR Group, dated January 08, 2024.*
- Using the open-loop well design requirements from the above assessment, cost estimates for the three campus system scenarios were developed, in order to help quantify the environmental impact and economic viability of these systems.
- The various well costs were then coupled with cost estimates for installing and operating ground-source heat pump systems in the three campus scenarios that were analyzed. These were then compared against traditional district heating (fossil fuel based) and cooling systems, from the existing Rozell Energy Plant, in order to determine potential reductions greenhouse gas emissions and energy cost savings for GSHP systems.

## ASSESSMENT SUMMARY, FINDINGS and CHALLENGES

- The Grande Rhonde aquifer has sufficient capacity to support open-loop type ground source heat pumps for the purpose of heating and cooling the EWU campus.
- The campus footprint is large enough to accommodate the development of enough extraction and reinjection wells, to transition the entire campus to GSHP based systems.
- Carbon savings could be significant compared to the existing fossil fuel-based district steam heating systems.
- Energy savings for GSHP systems, compared to the existing central energy plant, are tempered by the added, parasitic pumping energy needed for the open-loop well operations.
- Well costs, interconnecting infrastructure costs, and building HVAC retrofit costs required to utilize GSHP systems, will be considerable.
- Transitioning away from a single centralized energy production energy plant to decentralized, multiple, micro-district plants, will have added management, operational and maintenance costs, that are not included in this study.
- Prior to the design and installation of such GSHP systems as discussed in this report, other alternative HVAC systems, such as air-source heat pumps (which have been discussed in other studies) may provide more economical solutions for reducing carbon emissions on the EWU campus, since the costs to develop expensive well fields can be avoided. It is therefore recommended that more detailed analysis of potential GHG reducing HVAC systems and technologies be further evaluated, which compare life cycle costs vs. energy and carbon savings, prior to a final solution being selected.

# Next Steps and Other Considerations

---

## RECOMMENDED NEXT STEPS

- Review and discuss findings presented in this evaluation.
- Review possible alternative approaches or opportunities for carbon reductions on campus.
- Determine if the findings are compelling enough to justify additional, more detailed study, economics evaluation and likely environmental benefits and trade-offs.
- Develop a roadmap/playbook for implementing carbon reduction opportunities, with timelines and cost/budget estimates.
- Identify funding opportunities, including State capital monies, grants, incentives, and rebates.
- Develop a test well in order to validate preliminary hydro-geology expectations and to help better understand costs and challenges for future scalability.
- Develop alternative energy models for the planned Martin-Williamson Complex upgrade, to better understand the cost-benefits of alternative HVAC systems, such as air-source heat pumps, hybrid systems, etc.

## GENERAL COMMENTARY ON GROUND SOURCE HEAT PUMP (GSHP) SYSTEMS

- The application of ground source heat pump (GSHP) systems for building HVAC applications, is attractive from both an energy efficiency and carbon reduction standpoint. Because it can eliminate the use of fossil fuel for building heating, it can achieve the ideal goal of zero-carbon operation.
- Although the costs to drill and develop the required water well networks are significant, the considerable social and environment benefits to such a system, in addition to the current regulatory requirements, make such GSHP systems attractive for further consideration, as a serious and viable option for a significant campus Greenhouse Gas (GHG) reduction strategy.

## OTHER POSSIBLE CARBON REDUCTION STRATEGIES TO STUDY

- Air-Source Heat Pumps: Similar efficiencies to GSHPs most of the time. May requires supplemental heat in extreme weather. Possibly a more economical option.
- Hybrid Systems: Consider adapting/leveraging existing Central Energy Steam and Chilled water systems with building heat pumps, to optimize energy efficiency and cover the extreme weather periods, without oversizing the heat pumps.
- Green Fuels – Bio-diesel, Renewable Natural Gas & Green Hydrogen: Although so-called “Green Fuels” are not commercially viable for EWU, it may be worthy to consider advances in the development of these fuels for future applications.
- Existing Chiller Plant Optimization: Continue ongoing efforts to optimize the performance of the existing central chilled water plant, due to the fact that it is already carbon zero for campus building cooling duty, and is similar in efficiency to the proposed GSHP systems for air conditioning purposes, but without the added costs of developing the expensive well network. Consider the installation of a Thermal Energy Storage Tank, for added efficiency, and to take advantage of likely future time-of-day electric rates.
- Future Zero-Carbon Steam Production Technologies: High Temperature Heat Pumps, tied into ground-source wells as discussed in this report, combined with new generation Steam Compressors, may make it possible in the future to generate high pressure steam, using zero-carbon electric heat pumps, instead of traditional fossil fuels. Europe is leading the way in these technologies, for heavy industries that are looking for carbon-free steam for process uses. Such technologies may provide a possible bridge, as the campus transitions away from district steam heating to distributed heat pumps, but at the present time, these technologies are not widely used or available in the U.S.

# GSHP System Case Studies

## CASE STUDY SELECTION CRITERIA

Three (3) discrete GSHP system options were chosen for this feasibility study. These varied from one facility, to a group of several buildings, to the entire campus. The several scenarios were selected based on the idea of scaling-up the assessment from an individual building and system, as a starting point to determine viability, to a somewhat larger system, comprising a network of several nearby buildings, to the theoretical eventual conversion of the entire campus to a GSHP system.

Proposed well locations were selected to allow for the general NW to SE ground water flow direction in the Grande Rhonde aquifer, so that the reinjection wells were located “down stream” from the extraction wells, so as to minimize thermal break-through (short circuiting) over time.

## CASE STUDY – 1: MARTIN-WILLIAMSON HALL GSHP SYSTEM

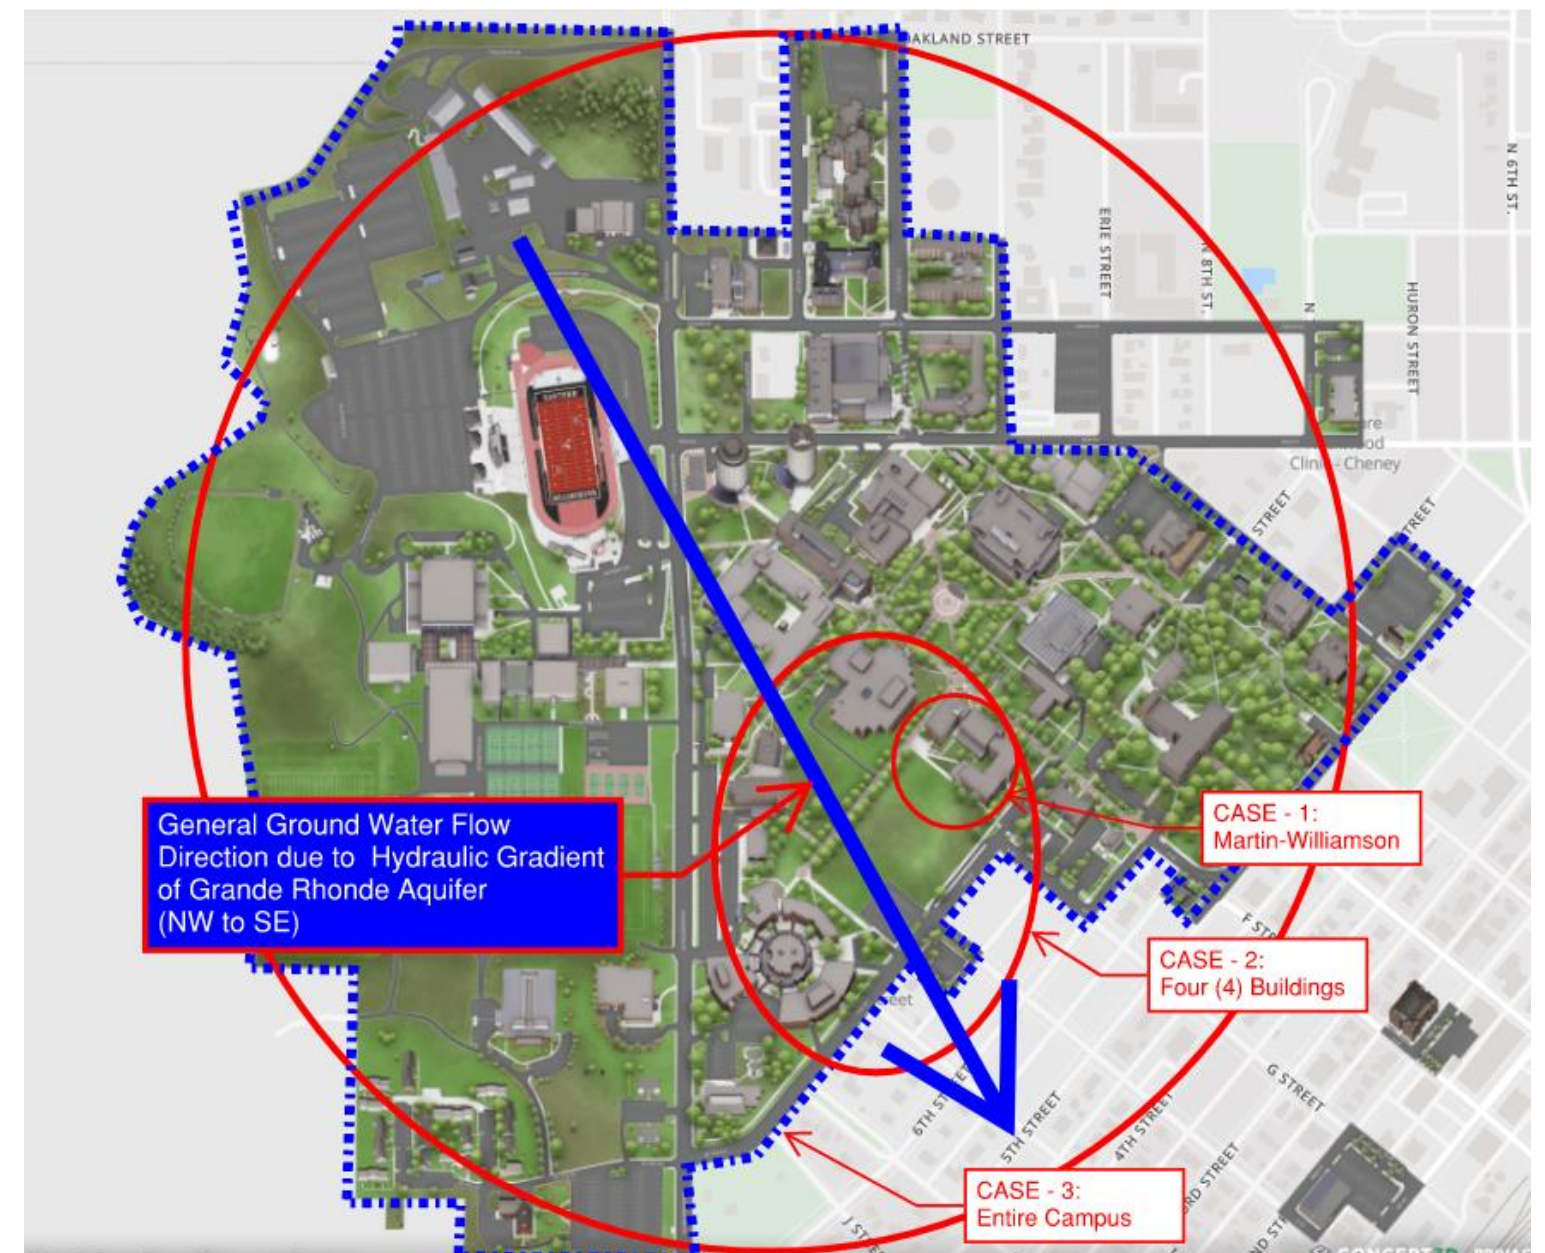

The first case to be study is based around the upcoming project involving the remodel and retrofit of the existing Martin-Williamson Hall facility. Because the existing, aging, HVAC system in Martin-Williamson Hall will be replaced with an entirely new, modern HVAC system, the application of a possible GSHP based system is a practical strategy.

## CASE STUDY – 2: FOUR (4) BUILDINGS – MICRO-DISTRICT GSHP SYSTEM

Then, considering the initial M-W case as a likely starting point for the campus transition to GSHP based systems, the nearby buildings that include the JFK Library, the Computing and Engineering Building (CEB) and the Art-Theater-Music (ART) complex, were chosen as part of a so-called Micro-District Heat Transfer Center, under the second case study. This would be a facility where the proposed several open-loop system source wells would deliver the ground water to heat exchangers for the building heat pump systems, before the ground water was returned to the ground via the reinjection wells.

## CASE STUDY – 3: ENTIRE CAMPUS – GSHP SYSTEMS

The third, and final, case study would provide a large network of source and reinjection wells, serving multiple micro-district heat transfer centers sprinkled around the campus, to support the entire campus using GSHP systems. This would be the upper boundary case in converting the whole campus to be conditioned by open-loop ground-source type heat pump systems.

# Hydro-Geological Assessment | Columbina River Basalt Group (CRBG)

## HYDRAULIC MODELING

## GRANDE RONDE AQUIFER | EXISTING CONDITIONS

Based on analysis by Landau Associates the CRBG aquifer below EWU campus consists of two units, the Wanapum basalt unit and the Grande Ronde basalt unit. The Grande Ronde is the more productive aquifer and is the focus of the hydrogeologic assessment. The following generalizations can be made.

- The CRBG aquifer is present at a depth of approximately 50 to at least 1,300 ft deep.
- It is one of the primary sources for EWU and the City of Cheney.
- The Grande Rhonde portion of the CRBG aquifer is assumed to be confined or semi-confined.
- General regional groundwater flow direction is south.
- Assumed hydraulic gradient: 0.001 to 0.01.
- Estimated transmissivity 9,900 to 1,400 SF/day (Grande Rhonde unit).
- The storage coefficient is assumed to be about 0.0002.

Water rights and impacts to neighboring water users has been reviewed by WNR group. Impairment does not appear to be a project constraint. New water rights for non-consumptive use are therefore likely to be approved.

## HYDRAULIC MODELING RESULTS | DESIGN FACTORS

- The aquifer can supply sufficient water to support each of the three case study scenarios proposed.
- Estimated source well pumping rates: 600 gpm to 1,500 gpm.
- Estimated pumping depths: 650 ft deep.
- Estimated draw-down: 16 ft to 87 ft.
- Recommended well spacing: 600 ft.
- Reinjection pressure: 9 to 41 psi.
- Case-1 can be supported by 1-extraction well and 1-injection well.
- Case-2 can be supported by 3-extraction wells and 3-injection wells.
- Case-3 can be supported by 10-extraction wells and 10-injection wells.

## THERMAL MODELING | THERMAL BREAKTHROUGH ANALYSIS

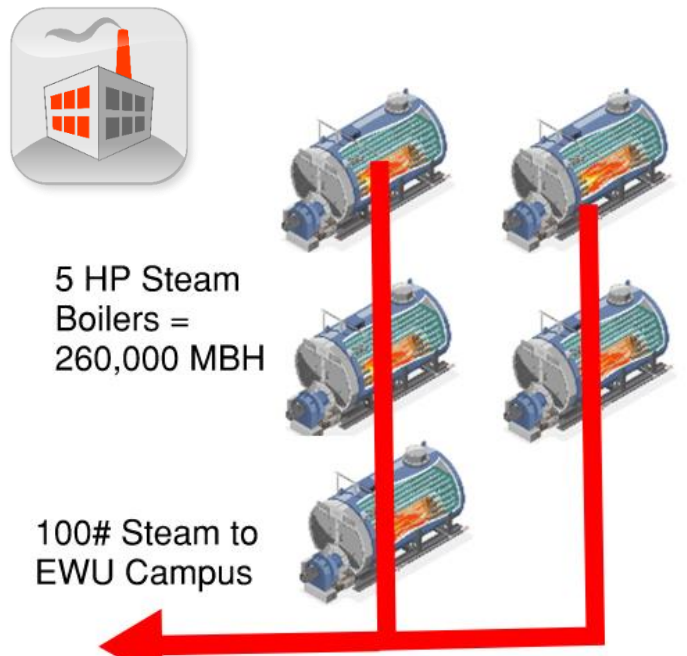

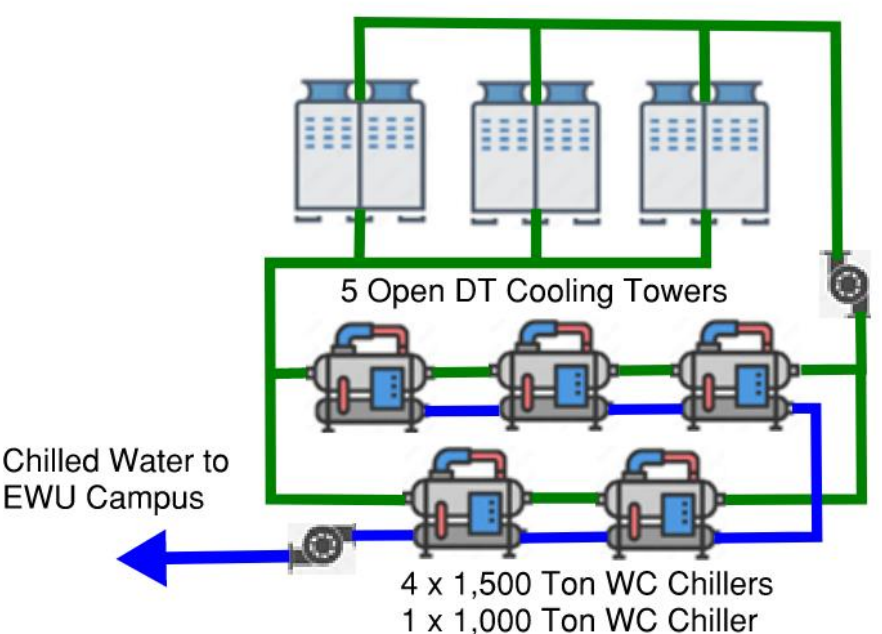

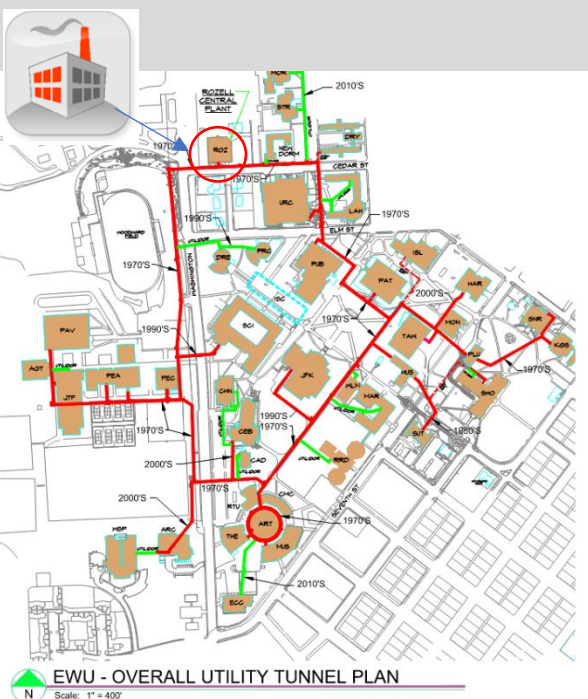

- Simulated well-field operation over time indicates no significant thermal breakthrough of waste heat for the proposed well head spacing and seasonal usages.

| <p><b>2022 EWU Utility Rates</b></p> <ul style="list-style-type: none"> <li>- Electricity (City of Cheney): Consumption Rate: \$0.064/kWh</li> <li>- Natural Gas (AVISTA): Consumption Rate: \$0.994/Therm</li> </ul> <p><b>E-GRID WA STATE CO<sub>2</sub>E FACTORS</b></p> <ul style="list-style-type: none"> <li>- Electricity CO<sub>2</sub>e = 0.44 lb/kWh</li> <li>- Natural Gas CO<sub>2</sub>e = 11.7 lb/Therm</li> </ul>   | <p><b>CAMPUS HEATING</b></p> <p>Heating for the EWU campus is provided by steam produced at the Central Rozell Energy Plant. High Pressure (100 psig) Steam is distributed through a campus-wide network of underground utility tunnels, which then feeds steam into each building. Steam pressure is typically reduced to about 15 psig, for space heating needs and domestic hot water production. Some buildings convert the steam to hot water, for hydronic heating, but most facilities use the steam directly. The steam condensate is pumped back to the central plant to be reused in the heating cycle.</p> <p>Campus heating, due to the cold winter months in eastern Washington, accounts for about 74% of the total central plant energy usage, and about 95% of the carbon emissions. As such the primary focus of this study is to explore opportunities to reduce carbon impacts from the heating plant.</p> | <p><b>CAMPUS COOLING</b></p> <p>Cooling for the EWU campus is provided by chilled water that is produced at the Central Rozell Energy Plant. Five water-cooled chillers and open-type cooling towers produce chilled water at approximately 45 deg. F, which is pumped around the campus through the utility tunnel network.</p> <p>The chiller plant is in the process of several modernization and energy upgrades, including water-side economizers and variable speed chillers and pumps. Winter cooling, when needed for process cooling needs, is provided by a separate dry-cooler unit, with glycol anti-freeze protection.</p> <p>The majority of the campus buildings are cooled (air-conditioned) from the chiller plant, except for most of the residence halls, which are not air conditioned. Chilled water from the plant is typically fed directly into the building's HVAC air handling units, without losses due to intervening heat exchangers.</p> | <p><b>EXISTING CENTRAL PLANT METRICS</b></p> <p><b>Fuel Costs:</b></p> <ul style="list-style-type: none"> <li>Natural Gas/Oil - \$1,988,000/yr</li> <li>Electricity - \$ 241,432/yr</li> </ul> <p><b>Emissions (GHG equivalents):</b></p> <ul style="list-style-type: none"> <li>Natural Gas/Oil – 2,340 Gas Cars/yr</li> <li>Electricity – 152 Gas Cars/yr</li> </ul> <p><b>Overall Campus Energy Density:</b></p> <ul style="list-style-type: none"> <li>Heating EUI – 77 kBtu/sf/yr</li> <li>Cooling EUI – 33 kBtu/sf/yr</li> </ul> |

# CASE STUDY-1 | Martin-Williamson Hall Complex GSHP System

## GROUND-SOURCE HEAT PUMP (GSHP) SYSTEM HVAC INFRASTRUCTURE:

- Water-to-Water Heat Recovery Chillers (Heat Pumps) – 2 Units
- Heat Exchanger
- Distribution Pumps (To GSHPs)
- Extraction Well Supply Pump
- Underground Piping to and from Well Heads.

### FIRST COSTS:

- Bldg HVAC Systems:  
 90K SF x \$35/sf = **\$3.1M**  
 (Costs for GSHP system components only, other HVAC costs are common to other systems)

## OPEN-LOOP TYPE EXTRACTION & REINJECTION WELL CHARACTERISTICS:

Target System Capacity:

**200 tons**

Ground Water Exchange Flow Rate:

**600 gpm**

Spacing Between Extraction and Reinjection Wells:

**600 ft**

|                   |                   |
|-------------------|-------------------|
| Total Well Depth: | No. of Wells:     |
| <b>1,075 ft</b>   | <b>2 (1-pair)</b> |

|               |                                   |
|---------------|-----------------------------------|
| Pump Depth:   | Average Reinjection Backpressure: |
| <b>650 ft</b> | <b>20 PSI</b>                     |

### FIRST COSTS:

- Wells, Pumps & Piping: **\$3.5M**  
 (\$1.5M per well – Typical)

## PROPOSED OPEN-LOOP WELL LOCATIONS:

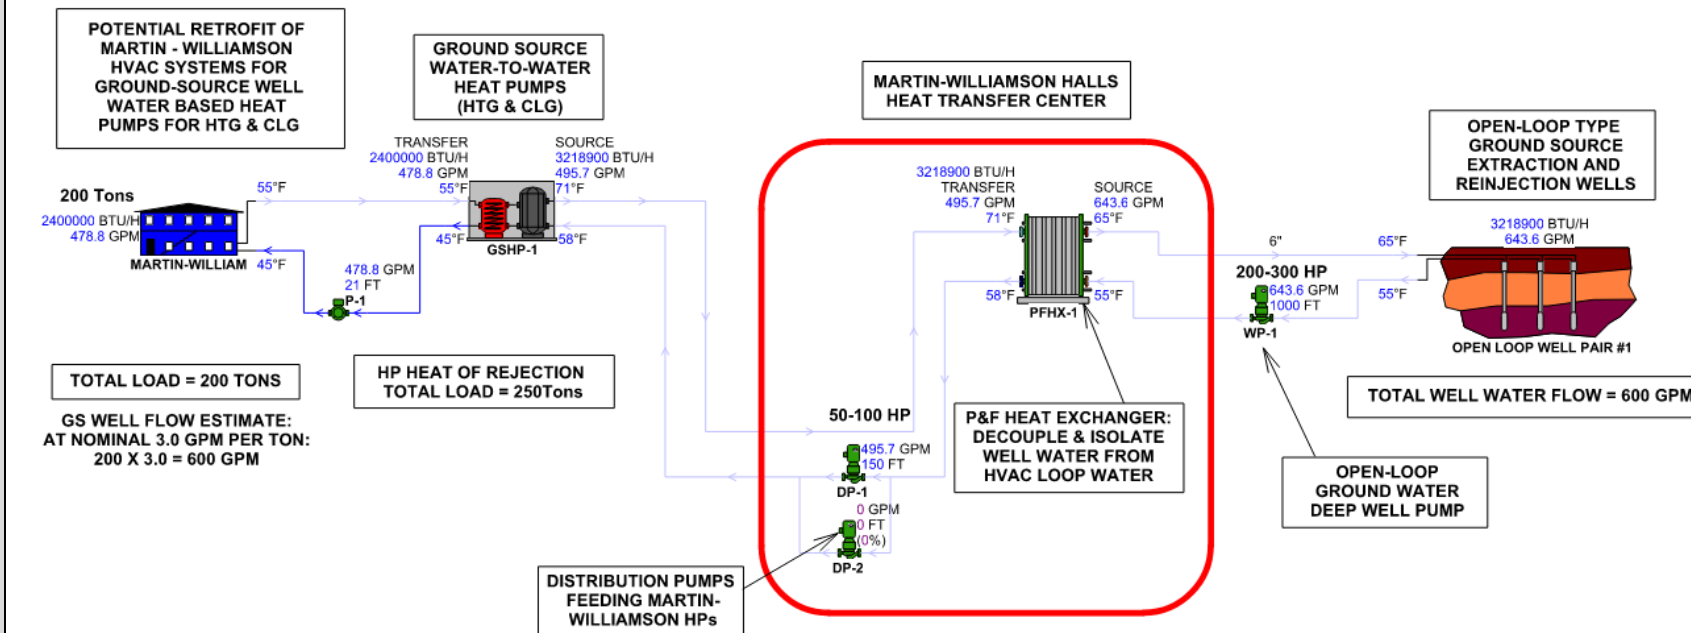

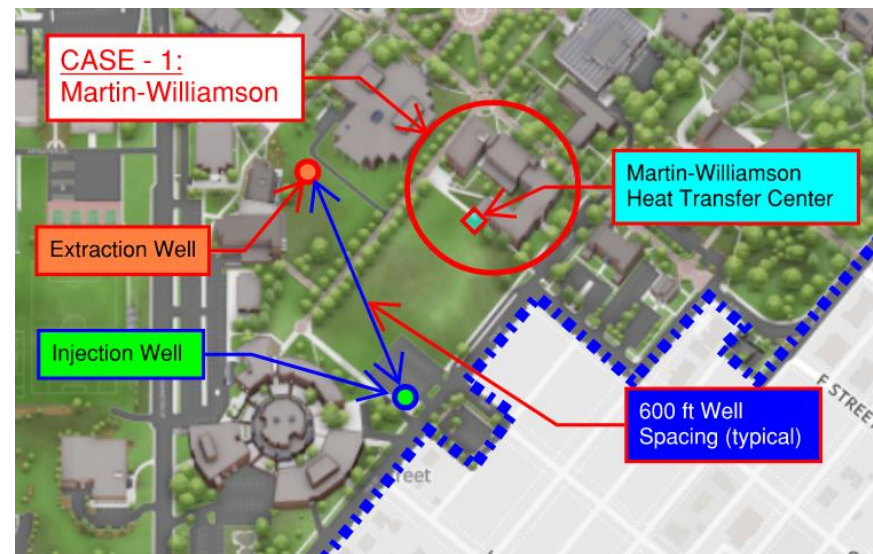

The proposed location of the extraction well, for the Martin-Williamson Complex, would be near the NE corner of the CEB building. The location of the injection well would be at the SE corner of the vacant lot, where the former Reid Elementary School was torn down. This well would be situated near the corner of the lot, to allow for future construction in the main vacant area, with piping running along the edges, to and from the well heads.

## PROPOSED SYSTEM DESIGN:

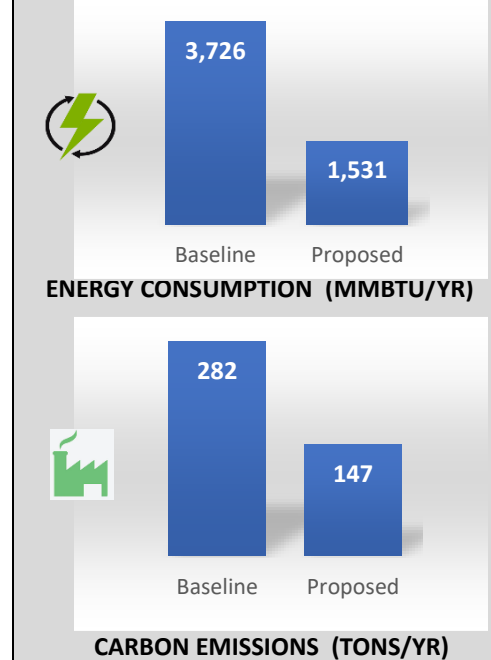

The existing Martin-Williamson Complex is in the process of being studied for a complete renovation and upgrade.

This provides an excellent opportunity to consider possible new, energy efficient, carbon-zero, HVAC system options.

For this study, the proposed HVAC system would be based on a ground-source heat pump (GSHP) system, utilizing open-loop wells for supply and reinjection of ground water, which acts as the source of the heat-sink & source for the central heat pump equipment. Utilizing a ground-source heat pump system for the building heating needs, which utilizes electricity, instead of fossil-fuel based steam from the Rozell Central Plant, allows the facility to be heated up to 400% more efficiently compared the existing steam system, thereby providing for significant reductions in greenhouse gas (GHG) emissions.

## ENERGY & CARBON ANALYSIS:

## PERFORMANCE ANALYSIS:

The open-loop ground source heat pump system is able to reduce heating energy by about 60% compared to heating from the existing central steam plant. Cooling energy is similar to the central chiller plant, since the GSHP's higher efficiency is tempered somewhat by the extraction well pumping energy needs.

## SAVINGS FROM BASELINE:

Heating EUI Savings: **25 btu/sf/yr**  
 Energy Cost Savings: **\$11,000/yr**  
 Carbon Emissions Reductions: **135 tons/yr**  
 (27 gas cars off the road)

## FIRST COST ANALYSIS:

The proposed GSHP system using open-loop wells, will have significantly higher first costs compared to a system that ties into the existing central plant steam and hot water systems.

# CASE STUDY-2 | Four (4) Building – Micro-District GSHP System

## GROUND-SOURCE HEAT PUMP (GSHP) SYSTEM HVAC INFRASTRUCTURE:

- Water-to-Water Heat Recovery Chillers (Heat Pumps) – 2 Units/Bldg
- Heat Exchangers
- Distribution Pumps (To GSHPs)
- Extraction Well Supply Pumps
- Underground Piping to and from Well Heads.

## FIRST COSTS:

- Bldg HVAC Systems: 515K SF x \$35/sf = **\$18.0M** (Costs for GSHP system components only). Also requires existing HVAC systems to be retrofit for GSHP duty.

## OPEN-LOOP TYPE EXTRACTION & REINJECTION WELL CHARACTERISTICS:

Target System Capacity:  
**1,600 tons**

Ground Water Exchange Flow Rate:  
**4,800 gpm**

Spacing Between Extraction and Reinjection Wells:  
**600 ft**

Total Well Depth:  
**1,075 ft**

No. of Wells:  
**6 (3-pairs)**

Pump Depth:  
**650 ft**

Average Reinjection Backpressure:  
**20 PSI**

## FIRST COSTS:

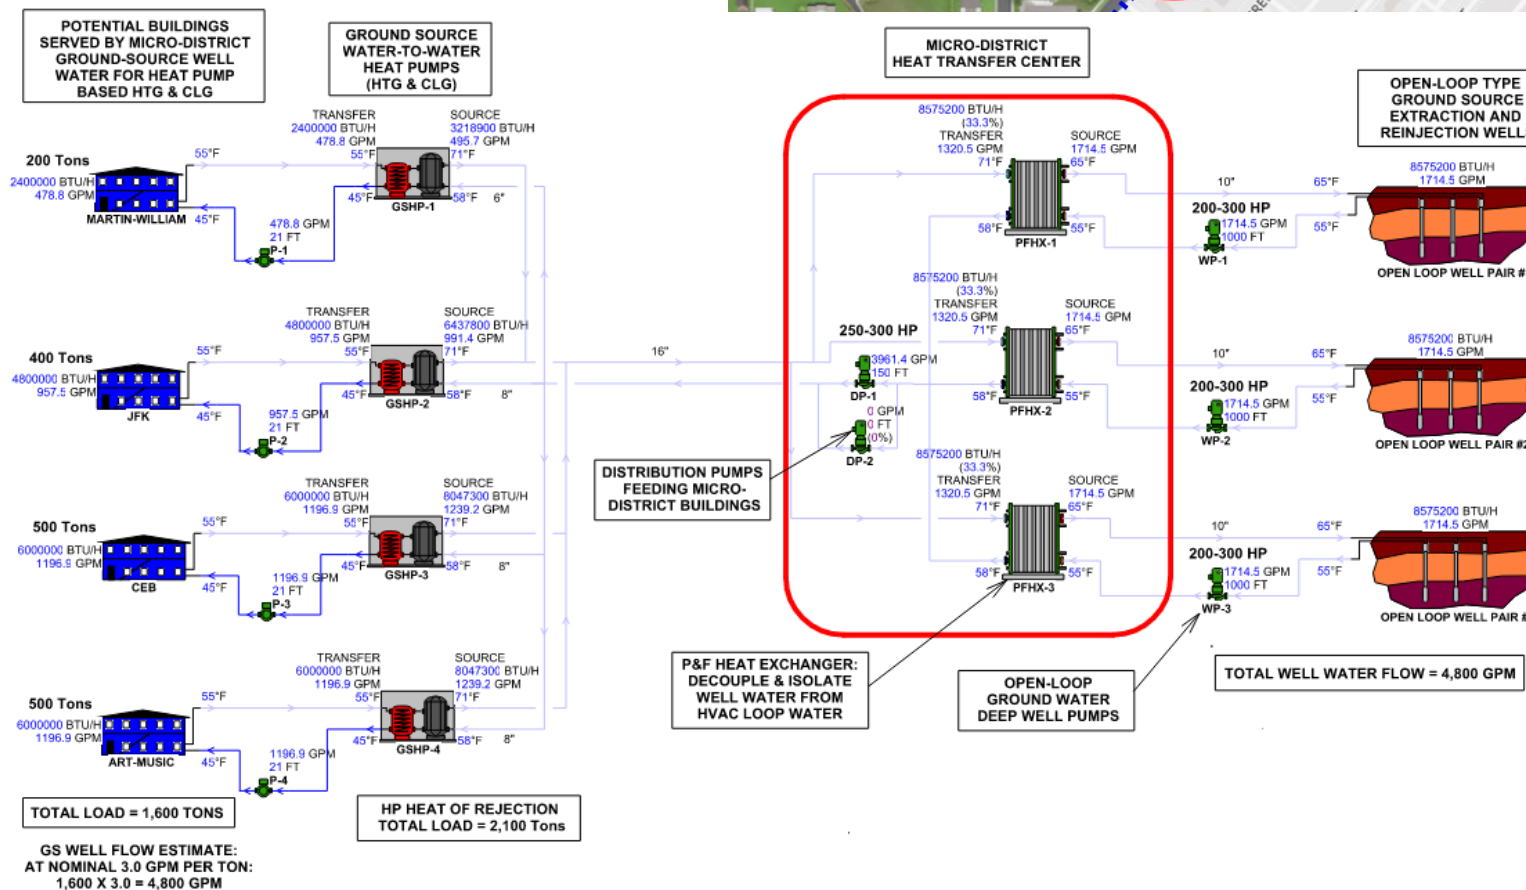

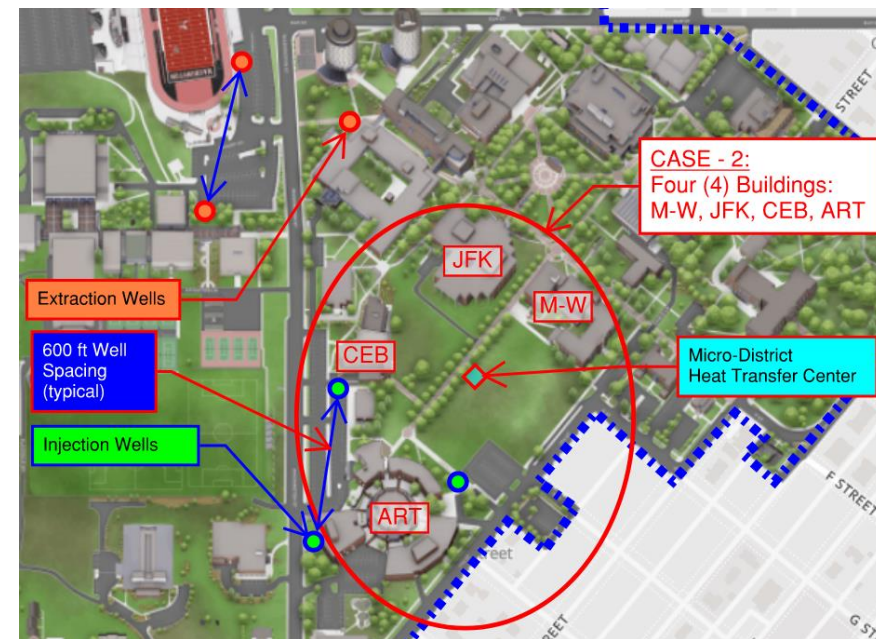

- Wells, Pumps & Piping: **\$10.5M** (\$1.5M per well – Typical)

## PROPOSED OPEN-LOOP WELL LOCATIONS:

Expanding on the well locations as proposed in Case Study-1, additional extraction wells would be added up-gradient, around the stadium parking areas, with matching reinjection wells located along Washington St, near the CEB and ART complexes.

## PROPOSED SYSTEM DESIGN:

In this scenario, the ground-source extraction wells would supply water to a central “Micro-District” Heat Transfer Center. Here the ground loops would be decoupled using heat exchangers, and secondary pumps would then distribute water to the various connected buildings in the network.

## ENERGY & CARBON ANALYSIS:

## ENERGY CONSUMPTION (MMBTU/YR)

## CARBON EMISSIONS (TONS/YR)

## PERFORMANCE ANALYSIS:

Similar to Case Study-1, The open-loop ground source heat pump system is able to reduce heating energy by about 60%, compared to heating from the existing central steam plant. There is some economy of scale in this scenario, with multiple wells that can be staged and optimized with load changes.

## SAVINGS FROM BASELINE:

- Heating EUI Savings: **30 btu/sf/yr**
- Energy Cost Savings: **\$65,000/yr**
- Carbon Emissions Reductions: **800 tons/yr** (160 gas cars off the road)

## FIRST COST ANALYSIS:

The proposed GSHP system using open-loop wells, will have significantly higher first costs compared to a system that ties into the existing central plant steam and hot water systems.

# CASE STUDY-3 | Entire Campus Conversion to GSHP Systems

## GROUND-SOURCE HEAT PUMP (GSHP) SYSTEM HVAC INFRASTRUCTURE:

- Micro-District Heat Transfer Buildings
- Water-to-Water Heat Recovery Chillers (Heat Pumps) – 2 Units/Bldg
- Heat Exchangers
- Distribution Pumps (To GSHPs)
- Extraction Well Supply Pumps
- Underground Piping to and from Well Heads.

## FIRST COSTS:

- Bldg HVAC Systems:  
2,600,000 SF x \$30/sf = \$78.0M  
(Costs for GSHP system components only). Also requires existing HVAC systems to be retrofit for GSHP duty.

## OPEN-LOOP TYPE EXTRACTION & REINJECTION WELL CHARACTERISTICS:

Target System Capacity:

**4,800 tons to 6,000 tons**

Ground Water Exchange Flow Rate:

**12,000 gpm to 15,000 gpm**

Spacing Between Extraction and Reinjection Wells:

**600 ft**

Total Well Depth:  
**1,075 ft**

No. of Wells:  
**20 (10 pairs)**

Pump Depth:  
**650 ft**

Average Reinjection Backpressure:  
**20 PSI**

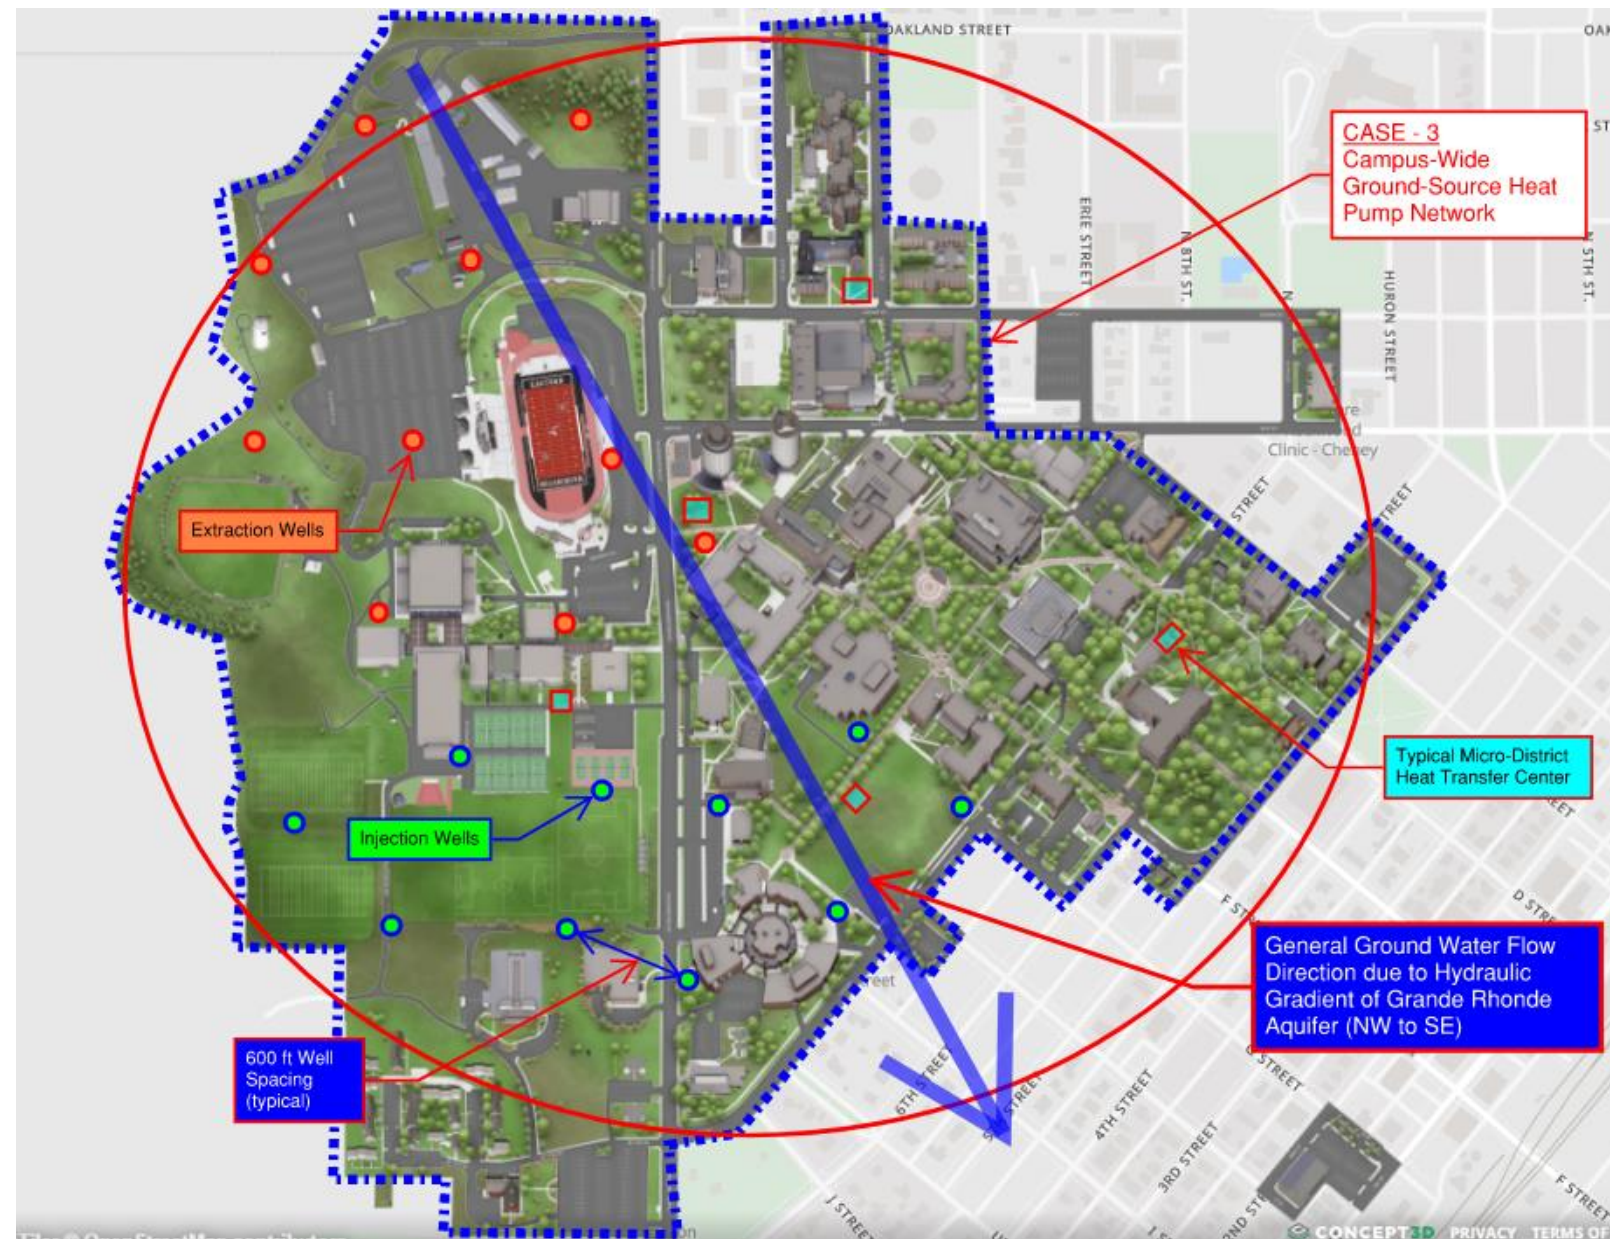

## FIRST COSTS:

- Wells, Pumps & Piping: \$32.0M  
(\$1.5M per well – Typical)

## PROPOSED OPEN-LOOP WELL LOCATIONS:

Converting the entire campus heating system to ground source heat pumps will require a considerable expansion of the well fields proposed in Case Studies 1 & 2. Under this scenario, it is envisioned that the extraction wells would be located up-gradient, mostly around the stadium and parking lots. The injection wells would be situated SE from the extraction wells, primarily along the perimeter of the playfields and central campus lawn areas.

Under this scenario, all of the campus buildings steam heating systems would need to be retrofit, in order to utilize the lower heating water temperatures produced by the ground-source heat pump systems. This will require a multi-year, phased approach, in order to transition away from the central energy plant, to the proposed distributed energy system.

## ENERGY & CARBON ANALYSIS:

## ENERGY CONSUMPTION (MMBTU/yr)

## CARBON EMISSIONS (TONS/YR)

## PERFORMANCE ANALYSIS:

Performance estimates for this scenario are simply extrapolations of the other case studies, scaled to the entire campus area. Due to the variations in building types, uses, operation, age, etc., detailed energy modeling estimates at this stage are not practical.

## SAVINGS FROM BASELINE:

- Heating EUI Savings: **48 btu/sf/yr**
- Energy Cost Savings: **\$620,000/yr**
- Carbon Emissions Reductions: **7,700 Tons/yr**  
 (1,540 gas cars off the road)

## FIRST COST ANALYSIS:

The costs of the proposed campus-wide GSHP system, to convert from central plant steam and chilled water, will be significant. Numbers presented here are simply rough-order-of-magnitude values, for conceptual planning purposes.

## EXECUTIVE SUMMARY

This report documents a preliminary hydrogeologic evaluation by Landau Associates, Inc. (Landau) of open-loop ground source heat pump (GSHP) well field alternatives for the Eastern Washington University (EWU) campus in Cheney, Washington. Landau has prepared the evaluation in partnership with Water and Natural Resources Group, Inc. (WNR) in support of MSI Engineers' (MSI) assessment of the feasibility and economic viability of converting EWU's heating and cooling system to GSHPs. Landau and WNR's scope of work is to develop a hydrogeologic conceptual model, including hydraulic and thermal modeling, and conduct a water rights and permitting evaluation. Landau and WNR completed assessment of three well field operation case study scenarios provided by MSI. Each case study consists of an injection well(s) and a pumping well(s) at various well spacing and pumping rates. A project vicinity map is presented on Figure 1. The scope of the evaluation was limited to a desktop study of the existing literature and available aquifer testing data for the area.

The hydrogeologic evaluation addressed three primary questions: 1) what are the permitting and water rights requirements for GSHP well field installation, 2) is aquifer yield sufficient to meet system capacity, and 3) can the aquifer provide sufficient thermal capacity while maintaining groundwater temperatures within practically operable ranges for GSHP on a long-term sustainable basis?

Three GSHP system options were evaluated:

1. Case Study 1 – Martin-Williamson Hall GSHP System: GSHP system to supply heating and cooling to Martin-Williamson Hall
2. Case Study 2 – Four Buildings, Micro-District GSHP System: GSHP system to supply heating and cooling to Martin-Williamson Hall, JFK Library, the Computing and Engineering Building, and the Art-Theater-Music Complex
3. Case Study 3 – Entire Campus GSHP System: GSHP system to supply heating and cooling to the entire EWU campus.

Implementation of a GSHP will require a new non-consumptive water right authorization from the Washington State Department of Ecology (Ecology). WNR completed a draft water right application, which is presented in Appendix D.

## SUMMARY OF FINDINGS

The following findings are supported by the hydrogeologic evaluation and modeling efforts described in the report:

- GSHP wellfield permitting requirements include obtaining a new water right and registration of all injection wells with Ecology's Underground Injection Control Program. Permitting requirements are unlikely to constrain project implementation.
- The EWU campus is underlain by a productive aquifer within the Grande Ronde Basalt Formation (Grande Ronde Basalt) of the Columbia River Basalt Group (CRBG). Landau's preliminary hydrogeologic evaluation suggests aquifer yield is sufficient to meet system capacity

for all three case study scenarios. Additional aquifer testing is recommended for the next phase of feasibility analysis to confirm aquifer yield in the campus area.

- Thermal modeling completed with the computer programs MODFLOW and MT3DMS suggests that, with proper placement of extraction and injection wells, groundwater temperatures at the point of extraction will fluctuate within a range of acceptable temperatures for operation of the GSHP system. Steady-state thermal conditions were simulated by running the thermal model for each case study for a period of 5 years, cycling between heating and cooling periods.

## 1.0 PROJECT BACKGROUND

This report documents a preliminary hydrogeologic evaluation by Landau Associates, Inc. (Landau) of open-loop ground source heat pump (GSHP) well field alternatives (project) for the Eastern Washington University (EWU) campus in Cheney, Washington. Landau has prepared the evaluation in partnership with Water and Natural Resources Group, Inc. (WNR) in support of MSI Engineers' (MSI) assessment of the feasibility and economic viability of converting EWU's heating and cooling system to GSHPs.

The ground source heat pump (GSHP) system proposed by MSI is an open-loop type system, where groundwater is pumped out of the aquifer, circulated through a heat exchanger, and reinjected back into the aquifer. Hydraulic and thermal modeling was completed to evaluate hydraulic and thermal capacity of the local aquifer to meet the GSHP demands for each case study. Aquifer extraction requires a water right from the Washington State Department of Ecology (Ecology) and reinjection requires registration with Ecology's Underground Injection Control (UIC) program. Permitting considerations are discussed in the following section, followed by a discussion of the hydrogeologic assessment, modeling results, well design, and recommendations.

## 2.0 PERMITTING CONSIDERATIONS

The project will first require a water right permit for the GSHP. Typically, new water right applications are acted upon in the order in which they are received by Ecology, which assigns the application's priority date. Certain new water right applications are granted priority processing dependent upon certain proposed project requirements and conditions. Under Washington Administrative Code (WAC) 173-152-050(2), an application may receive priority processing if Ecology determines that, "the proposed water use is non-consumptive and if approved would substantially enhance or protect the quality of the natural environment (WAC 173-152-050[2][b]). Ecology also has Policy 2020 – Priority Processing of Heat Pump Applications." This policy also states that a withdrawal for heat exchange purposes may be afforded priority processing if the conditions under WAC 173-152-050(2)(b) are met. The proposed EWU GSHP open-loop heat exchange system meets the criteria set forth in WAC 173-152-050(2)(b) and as such, Ecology should afford it a priority processing status.

Ecology Policy 2020 governs the determination of consumptive versus non-consumptive water use. The policy defines groundwater use as non-consumptive when, "there is no diminishment of the source." As proposed with this project, the groundwater withdrawn for the GSHP will immediately be injected back to the source "in the same quantity and quality (excluding temperature change) at a point in close proximity to the withdrawal wells." Assuming the proposed project meets these standards, a non-consumptive water right has a relatively high probability of being approved by Ecology.

The proposed water right application (Appendix D) exceeds the 2,250 gallons per minute (gpm) exemption limit, and as such will require submittal of a State Environmental Policy Act (SEPA) checklist. The SEPA process will be conducted upon submittal of the water right application.

The project will also be required to register as a Class V Underground Injection Control well with Ecology. Owners or operators of proposed—or existing—underground injection control wells must register their wells online using the SecureAccess Washington website. All injection wells must either receive a program rule authorization or a state discharge permit in order to operate.

Ecology's Underground Injection Control rule, Chapter 173-218 WAC, authorizes open-loop heat pump/air conditioning (HAC) system wells when a well is registered, and the environmental protection requirements of the rule are met. The following conditions are required to authorize HAC systems in the form of an injection well:

- No chemicals are added to the HAC system
- The HAC system meets water right permitting requirements
- Discharges from wells do not affect the water quality in nearby waters on the 303(d) polluted waters list
- Discharges from wells do not affect the water in nearby waters with a Total Maximum Daily Load (water quality cleanup) plan
- Discharges from wells do not affect groundwater quality by concentrating or redirecting existing contaminant plumes

- Groundwater used in the HAC system must be discharged back to the source aquifer.

EWU will coordinate with Ecology upon water right permit authorization to assure all injection well requirements are met.

## 3.0 HYDROGEOLOGIC ASSESSMENT

Eastern Washington University lies within the Columbia Plateau. Local geology and hydrogeology are dominated by the presence of the CRBG. The CRBG is generally the most consistent source of large groundwater yields required by local water purveyors (Kahle 2011 and GeoEngineers 2015). A site plan that includes surficial geology is presented on Figure 2. A geologic cross section of the EWU campus is presented on Figure 3.

### 3.1 Geologic Setting

The city of Cheney, Washington (Cheney) is located on the northeast margin of the Columbia Plateau, a structural and topographic basin within the drainage of the Columbia River infilled by the CRBG. The CRBG consists of a series of flows, which erupted during the Miocene Epoch about 17 million to 6 million years ago. In the northeast region of the plateau the basalts are relatively undeformed with a gentle southwest slope. In the project area, the CRBG is divided into two basalt units—the Wanapum, and Grande Ronde Formations—and their sedimentary interbeds. Each formation consists of multiple individual flows. The presence of sedimentary interbeds reflect deposition in streams and lakes during periods between the eruption of basalt flows. The CRBG stratigraphically overlays basement rocks that consist of meta-sedimentary rocks of the Precambrian age Belt Supergroup that have undergone low-grade metamorphism during Mesozoic and Tertiary periods. Surface topography is characterized by channeled bedrock, carved by catastrophic glacial floods of the last ice age (Pleistocene time), sediments deposited by glacial flood waters, and wind deposited silts.

The stratigraphic sequence beneath EWU can be generalized as follows:

- Zero to 50 feet below ground surface (ft bgs) of unconsolidated surficial deposits, sand and gravel, and wind-deposited silts
- 50 to 1,300 ft bgs of CRBG
  - 50 to 300 ft bgs, Wanapum Basalt and sedimentary interbeds
  - 300 to 1,000 ft bgs, Grand Ronde Basalt and sedimentary interbeds
- 1,300 ft bgs and below, pre-CRBG basement rock (Kahle 2011, Buchanan 2007, and well log interpretation).<sup>1</sup>

### 3.2 Hydrogeologic Units

All three locally present stratigraphic units described above store water in the project area; however, surficial deposits and the basement rock are not anticipated to produce sufficient yield for a GSHP system. Unconsolidated surficial deposits typically have a saturated thickness of less than 10 ft and are not considered reliable for long term supplies of large quantities of groundwater. The basement rock generally has much lower permeability than the basalts and in most areas of the Columbia Plateau are considered the base of the groundwater flow system (Kahle 2011); however, the basement rock beneath Cheney may be an exception. Cheney Wells 4 and 5 are developed in basement rock aquifer

---

<sup>1</sup> Nearby well logs are presented in Attachment A. Well locations are presented on Figure 2.

with total depths of 2,136 ft and 2,134 ft, respectively, and maximum reported yields of 250 gpm and 750 gpm, respectively (Parametrix 2019).

The CRBG is generally the most consistent source of large groundwater yields in the area and is the focus of this assessment. A more detailed description of the surficial aquifer unit and the basement aquifer unit can be found in Kahle 2011, Buchanan 2007, and GeoEngineers 2015.

### **3.2.1 Columbia River Basalt Group Aquifer**

The CRBG aquifer system is a series of vertically stacked confined or semi-confined basalt aquifers with water yield concentrated at interflow zones (i.e., the zone between two individual basalt flows). Interflow zones include a flow top, a flow bottom, and a sedimentary interbed if present. Interflow structures can include vesicular and/or brecciated flow tops, flow bottom pillow complexes and/or brecciated zones; these features create permeability and storage (Kahle 2011). Water reaches the interflow zones and recharges the aquifers by downward percolation or by lateral groundwater inflow (Luzier and Burt 1974). Movement of groundwater vertically along joints in the basalt is estimated to be several orders of magnitude lower than the horizontal range of movement. Cheney wells 1, 2, 3, 6, and 7 are developed in the CRBG aquifer, as are EWU wells 1 and 2R (Parametrix 2019).

The Grande Ronde Basalt aquifer is considered the most productive basalt aquifer in the project area. The Grande Ronde Basalt aquifer is mostly confined and is recharged to a large degree by lateral groundwater inflow. The overlying Wanapum Basalt aquifer is partially recharged by precipitation and infiltration and is the source of water for many springs and lakes in the Cheney area (Buchanan 2007).

Well logs in and around the EWU campus record a substantial (75- to 100-ft-thick) sedimentary interbed at depths of 500 to 600 ft bgs. Previous hydrogeologic studies have interpreted this layer to be the Latah formation, which is broadly understood to have been deposited between the Wanapum Basalt and the Grande Ronde Basalt (Kahle 2011 and Cheney wellhead protection plan). However, recent geochemical analysis of samples collected from Cheney Well 5 identified the contact between the Wanapum and Grande Ronde Basalts at about elevation 2,200 ft (200 to 300 ft bgs; Buchanan 2007 and GeoEngineers 2015). This depth correlates to an approximate Wanapum Basalt thickness of 220 ft to 280 ft in the EWU campus area.

## **3.3 Aquifer Hydraulic Parameters**

Well testing and hydrogeologic reports were reviewed to estimate hydraulic parameters for the Grande Ronde Basalt aquifer in the vicinity of the EWU campus. Aquifer parameter estimates are summarized in Table 1.

**Table 1. Hydraulic Parameters**

| Model Parameter                                | Value      |
|--|------------|
| Aquifer Transmissivity (square feet per day)   | 9,900      |
| Aquifer Storativity (unitless)                 | 0.0002     |
| Static Water Level (feet below ground surface) | 300 to 400 |
| Hydraulic Gradient                             | 0.01       |

### 3.3.1 Aquifer Transmissivity

Aquifer transmissivity (T) describes the ability of the aquifer to transmit groundwater throughout its entire saturated thickness. Transmissivity is the product of hydraulic conductivity (i.e., the capacity of the aquifer material to transmit water) and aquifer thickness:

$$T = Kb$$

Where K is transmissivity and b is aquifer thickness

Transmissivity can be determined via pumping tests, analysis of aquifer material, or calculations based on laboratory tests. Of these methods, transmissivity values established during pumping tests are typically considered the most accurate. Due to the heterogeneity of hydraulic conductivity in the Grande Ronde Basalt aquifer and variability in saturated aquifer thickness, pumping test data from onsite EWU Well 2R is anticipated to be most representative of local conditions (versus pumping test data from wells at greater distances from campus).

In 2015, pumping tests were completed on a new water supply well (Well 2R) installed on EWU campus. Analysis of the constant-rate pumping test data estimated an aquifer transmissivity range of 9,900 square feet per day (ft<sup>2</sup>/day) to 14,000 ft<sup>2</sup>/day, using the Cooper-Jacob graphical method and the Theis recovery method, respectively (GeoEngineers 2015). For conservatism, the lower transmissivity value was selected for modeling purposes.

The pumping well screen was open to 225 ft of the aquifer, and approximately 100 ft of that interval was estimated to be water-bearing interflow zones. Therefore, for modeling purposes, an aquifer thickness of 100 ft was assumed.

### 3.3.2 Aquifer Storativity

Aquifer storativity (S) is a measure of an aquifer’s ability to store and release water and is defined as the volume of water that a unit will absorb or release from storage per unit surface area per unit change in hydraulic head. Storativity is also known as the storage coefficient; it is dimensionless and is expressed as a decimal. Storativity cannot be estimated from a pumping test without observation well data (testing of Well 2R did not include an observation well[s]), therefore a representative value was selected from

available literature. The estimated median storage coefficient for the Grande Ronde Basalt aquifer is 0.0002 (Kahle 2011).

### 3.3.3 Static Water Level and Hydraulic Gradient

Groundwater levels in the Grande Ronde Basalt aquifer are between about 2,100 and 2,200 ft elevation in the Cheney area (Whiteman 1986) (i.e., between 300 and 400 ft bgs in the EWU campus area). The groundwater flow direction is interpreted to be to the south-southeast with a gradient of 0.01.

During the production well evaluation at Well 2R, completed in 2015, the static groundwater level in the Grande Ronde Basalt aquifer was approximately 350 ft bgs (GeoEngineers 2015). The groundwater level was monitored for a 7-day period under non-pumping conditions. A cyclic fluctuation of 1½ ft was recorded and interpreted to be interference associated with the pumping cycle at Well 1. On a larger timescale, existing historical data indicate that groundwater mining is occurring in the aquifer system beneath the city of Cheney and modeling efforts predict that the rate of water level decline will increase as pumping demands grow with anticipated increases in city population (Buchanan 2007).

Groundwater flow in the CRBG near the Cheney area is generally to the south and southwest, towards the center of the Columbia Basin. However, flow in the Grande Ronde Basalt aquifer in the area of the EWU campus appears to be to the south-southeast due to the presence of a groundwater trough to the southeast of Cheney. Grande Ronde Basalt aquifer groundwater elevation contours are presented in Figure 4 (Whiteman 1986). Groundwater flow direction should be confirmed in the next phase of project design; it is an important design variable for sustaining groundwater temperature targets at the source well.

## 4.0 MODELING

Hydraulic modeling was completed using estimated aquifer parameters discussed above. Three GSHP system options were evaluated:

1. Case Study 1 – Martin-Williamson Hall GSHP System: GSHP system to supply heating and cooling to Martin-Williamson Hall. Consists of one injection well and one extraction well. Preliminary well locations for Case Study 1 are shown on Figure 5A.
2. Case Study 2 – Four Buildings, Micro-District GSHP System: GSHP system to supply heating and cooling to Martin-Williamson Hall, JFK Library, the Computing and Engineering Building and the Art-Theater-Music Complex. Consists of three injection wells and three extraction wells. Preliminary well locations for Case Study 2 are shown on Figure 5B.
3. Case Study 3 – Entire Campus GSHP System: GSHP system to supply heating and cooling to the entire EWU campus. Consists of ten injection wells and ten extraction wells. Preliminary well locations for Case Study 3 are shown on Figure 5C.

Case Study scenarios were presented to Landau by MSI, including associated target system capacity in units of gpm and preliminary design assumptions (e.g., number of wells required, well depth, and well spacing). Hydraulic and thermal modeling was completed to evaluate the feasibility of achieving the necessary well yields to meet system capacity demands and maintain sustainable groundwater temperatures for effective operation of the GSHP system.

### 4.1 Hydraulic Modeling

Drawdown at the extraction well and mounding at the injection well were simulated using the modified nonequilibrium equation (Driscoll 1986) and estimated aquifer parameters presented above.

$$s = \frac{264Q}{T} \log \frac{0.3Tt}{r^2S}$$

Where: s = drawdown, in ft

Q = pumping rate, in gallons per minute

T = transmissivity, in gallons per day per foot (9,900 ft<sup>2</sup>/day)

t = time since pumping started, in days (1,825 days = 5 years)

r = distance from pumping well, in ft (i.e., well spacing)

S = coefficient of storage (dimensionless; 0.0002)

The drawdown (or mounding) value (s) at each well location was calculated for each case study, simulating the effects of combined extraction and injection on the water level in the aquifer. Drawdown in the extraction wells is offset by the return of groundwater through the injections well, which has the opposite effect on the water level than pumping (i.e., raises rather than lowers water levels). Drawdown or mounding analysis does not take into account well efficiency. Well efficiency (drawdown in the well divided by drawdown in the aquifer directly outside the well) is less than 100 percent due to the effect of well loss as water enters or exits the well screen. For the purposes of this evaluation, it may be

assumed that well efficiency would cause drawdown in the wells to be roughly 10 to 20 ft lower (or higher in the case of injection). Model inputs and results are summarized below:

**Table 2. Hydraulic Modeling Results Summary**

|  | Case Study 1 | Case Study 2 | Case Study 3 |
|--|--------------|--------------|--------------|
| Q (gpm)  | 600          | 1,200        | 1,500        |
| r (ft)   | 600          | 500 – 1,600  | 340 – 3,010  |
| Maximum drawdown (s, ft)                                   | 16           | 43           | 87           |
| Maximum mounding (-s, ft)                                  | 16 (7 psi)   | 43 (19 psi)  | 87 (38 psi)  |
| Available water column above pump at maximum drawdown (ft) | 284          | 257          | 213          |

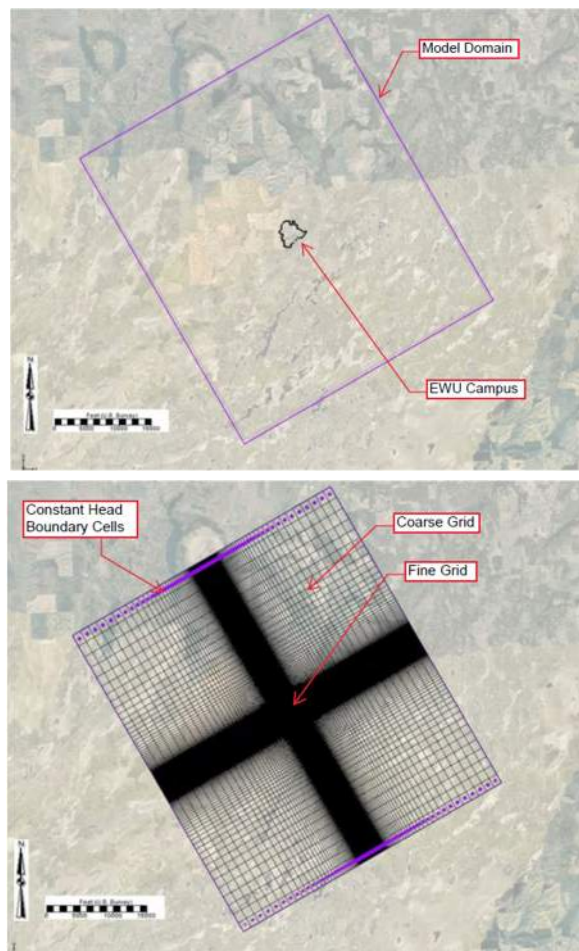

- a. **Note:** Hydraulic head in the Grande Ronde Basalt aquifer in the vicinity of the EWU campus is estimated to be around 350 ft bgs. Available water column is calculated as follows: pump depth minus static water level minus drawdown. Drawdown and mounding values presented do not take into account well efficiency, see discussion in text.

Hydraulic modeling details are included in Appendix B.

## 4.2 Thermal Modeling

Overall anticipated GSHP system performance within the constraints of the site hydrogeologic setting, as described above, was evaluated with numerical groundwater flow and heat transport modeling (thermal modeling). Thermal modeling was completed using a simple 1-layer groundwater transport model using the US Geological Survey (USGS) numerical MODFLOW (for groundwater flow) and MT3DMS (for heat transport) model codes, as accessed via Aquaveo’s Groundwater Modeling System (GMS) software. GMS allows for convenient GIS-based conceptual model setup, conversion to numerical model grid space, and high-quality output graphics to visualize modeling results. The thermal model was set up as a simplified single layer to represent the Grande Ronde Basalt aquifer, with the following key parameters:

- Model grid dimensions (i.e., model domain): approximately 50,000 ft by 45,000 ft—with the EWU campus in the approximate center—or approximately 10 times the general dimensions of the campus (see adjacent graphic), in order to reduce the effect of model boundary conditions on simulated results at the campus location. Model grid cells were set to be 50 ft by 50 ft in the vicinity of campus (i.e., refined to allow for flexibility in extraction and injection well placement as well as to allow for the resulting steeper hydraulic gradients around the wells). The grid was expanded to 1,300 ft by 1,300 ft toward the model boundaries (i.e., expanded to reduce computational needs of the simulations). The model grid was rotated approximately 30 degrees counter-clockwise to allow for convenient assignment of up-gradient and down-gradient hydraulic boundary conditions to represent the general North-Northwest to South-Southeast hydraulic gradient assumed for the campus vicinity.
- The top and bottom of the model were set to a uniform elevation of 2,000 ft and 1,900 ft, respectively; therefore, the model thickness is roughly 100 ft, representing the combined thickness of the basalt interflow zones encountered in Well 2R.
- A uniform hydraulic conductivity of 99 ft per day and a specific storage value of  $2.0 \times 10^{-6} \text{ ft}^{-1}$  (which relates to a storage coefficient value of 0.0002, given an aquifer thickness of 100 ft) were assigned to the model.<sup>2</sup>
- Boundary conditions—both hydraulic and temperature—were assigned to the northwest and southeast edge of the model to simulate background aquifer conditions. The hydraulic boundary conditions were assigned using the specified head (CHD) package in MODFLOW. The resulting background simulated hydraulic conditions in the vicinity of the campus included a simulated head ranging from 2,130 to 2,160 ft with a hydraulic gradient of 0.01 ft per foot. Extraction and injection wells were assigned to the model, in accordance with well layout and pumping rates described for each GSHP case, using the WEL package in MODFLOW.<sup>3</sup> The temperature boundary conditions were assigned to the same up-gradient and down-gradient model boundary cells and assigned to be 286 Kelvin (or about 55 degrees Fahrenheit). Aerial recharge (i.e., from precipitation infiltration) was not applied to the top of the model, with the assumption that vertical percolation of precipitation to the Grande Ronde Basalt aquifer is

<sup>2</sup> Note that, because the flow model was run in steady state (not transient, or time-varying) conditions, the aquifer storage term is not important for model results.

<sup>3</sup> Case 1, with one extraction well and one injection well, extraction and injection rates were assigned 600 gpm for each well; Case 2, with three extraction wells and three injection wells, extraction and injection rates were assigned 1,200 gpm for each well (or 3,600 gpm total extraction and injection); Case 3, with ten extraction wells and ten injection wells, extraction and injection rates were assigned 1,350 gpm for each well (or 13,500 gpm total extraction and injection).

limited. Rather, up-gradient groundwater recharge to the aquifer is implicitly represented by the CHD boundary conditions.

- As described above, background groundwater temperature was assigned 286 Kelvin (or about 55 degrees Fahrenheit). GSHP injection water (with temperature depending on the operational period of the GSHP system) was applied to the injection well(s). Wintertime relatively cool injection water from the GSHP system was assigned a temperature of 279 Kelvin (or about 42.5 degrees Fahrenheit). Summertime relatively warm injection water from the GSHP system was assigned a temperature of 293 Kelvin (or about 67.7 degrees Fahrenheit). Advection, dispersion, conduction, and thermal retardation are the primary heat transport mechanisms represented in MT3DMS. Heat advection was simulated with a third-order total variation diminishing scheme (the default option in GMS). Dispersion was represented in both longitudinal (parallel to groundwater flow, with a dispersivity value of 0.5) and transverse (perpendicular to groundwater flow, with a dispersivity value of 0.1). Conduction was simulated in MT3DMS with the molecular diffusion coefficient of  $2.15 \times 10^{-11}$ . Thermal retardation was calculated using bulk density ( $1,961 \text{ kg/m}^3$ ), sorption coefficient ( $0.00021 \text{ m}^3/\text{kg}$ ), and porosity (0.25) values such that the resulting retardation factor applied to the model was 2.6.
- The MODFLOW groundwater flow model, including simulated hydraulic effect of pumping from the extraction wells and injecting to the injection wells, was set up in steady-state (not time-varying) mode to represent long-term sustained pumping/injecting conditions. The MT3DMS heat transport model, however, was set up in transient mode with daily timesteps, including 10 stress periods representing five repeated annual cycles of cooling/heating operational periods of the GSHP system. Each cycle of cooling/heating periods included 212 days (from October 1 to April 30) of GSHP heating (during which injected water is relatively cool) and 153 days (from May 1 to September 30) of GSHP cooling (during which injected water is relatively warm). Therefore, the thermal model was set up to simulate the heat transport effect on the aquifer from the anticipated operations of the GSHP system over a 5-year period.

Each GSHP case was then evaluated by simulating the extraction and injection wells (via MODFLOW) and heat transport of injected GSHP system water (via MT3DMS) in general accordance with the pumping (extraction/injection) rates and injected water temperatures described above and with well layouts for each case. The results were evaluated by tracking simulated heat in the aquifer over time, both in plan view (i.e., thermal contours across the campus) and in time series (from a representative model cell) formats. The thermal modeling results of each simulated case are presented in Appendix C.

Thermal modeling indicates that a likely temperature effect from the injection wells would be observed at the extraction wells in less than 5 years for all three case studies. This effect consists of an annual fluctuation from warmer than ambient (ambient equal to 286 degrees Kelvin) to cooler than ambient. However, it is likely that the temperature impact would stabilize (reach a maximum impact) in less than 5 years. The maximum temperature impact that was observed was for Case Study 3. At an arbitrary monitoring point within the extraction well array, temperatures fluctuated between about 291 and 280 degrees Kelvin annually. This seasonal pattern stabilized after about 2 years.

## 5.0 WELL DESIGN

For the purposes of cost estimation, MSI requested that Landau establish preliminary well design parameters. Well design parameters are largely based on production well testing of EWU Well 2R and proven well yield. Landau assumes Ecology will require injection wells to reinject into the same aquifer interval as the extraction wells, therefore preliminary injection well design recommendations and preliminary extraction well design recommendations are the same. Design parameters are presented in Table 3 and discussed in the following subsections.

**Table 3. Preliminary Well Design Recommendations (Based on Well 2R construction)**

| Diameter        | 16-inches  |
|-----------------|--|
| Well Depth      | 1,075 ft bgs   |
| Screen interval | 225 ft of screen installed between 677 and 1,075 bgs |
| Depth to Pump   | 650 ft bgs   |

**Note:** Screened interval is within the Grande Ronde Basalt aquifer.

### 5.1 Well Diameter

The recommended extraction and injection well diameter is 16 inches. A 16-inch-diameter well can accommodate a well yield of 800 to 1,800 gpm (Driscoll 1986).

### 5.2 Well Depth and Screen Interval

The recommended well depth and screen interval is 1,145 ft bgs with a 225 ft screen installed between 677 and 1,075 ft bgs.

As a matter of policy, Ecology considers the Wanapum and the Grande Ronde Basalt Formations to be two distinct aquifers. Per WAC Chapters 173-160-181(3) and 173-160-450, water wells may not interconnect aquifers. Ecology typically requires that wells are cased and sealed at least 200 ft into the Grande Ronde Basalt to minimize aquifer interconnection. In the project area, 200 ft into the Grande Ronde Basalt is estimated to be approximately 430 ft bgs. If the well screen interval is 225 ft (approximately the same length as at Well 2R), the minimum well depth would be 665 ft bgs. The maximum well depth would be the estimated depth of the bottom of the Grande Ronde Basalt in this area, which is 1,370 ft. Ultimately, extraction and injection wells would be installed within this range of well depths to intersect sufficient basalt interflow zones to accommodate the design pumping and injection rates. For the purposes of cost estimation, it is recommended the wells target the same depth and screened interval as Well 2R (see Table 3), which discharged 1,300 gpm with only 28 ft of drawdown during a 24-hour constant-rate pumping test.

## 5.3 Pump Depth

Based on the recommended screen placement, the recommended pump depth is approximately 650 ft bgs. The intake of a pump should be placed above the well screen to minimize the risk of distorted flow patterns occurring in the vicinity of the screen, which can result in well fouling and pump damage (Driscoll 1986, Gjengedal et al. 2019). Also, enough water must be present above the pump suction port (i.e., intake) so that the pump remains submerged during groundwater extraction (i.e., anticipated drawdown does not expose the pump). A pump submergence of 20 ft during pumping is typically sufficient for safe operation; however, the pump specification sheet should be reviewed to confirm the pump net positive suction head required (NPSHr). The NPSHr is the minimum pressure at the suction port of the pump required to keep the pump from cavitating.

## 6.0 SUMMARY AND RECOMMENDATIONS

The local Grande Ronde Basalt aquifer appears to have the hydraulic characteristics to support a high yield open-loop GSHP system. Landau's and WNR's analysis of the regulatory environment, hydrogeology and aquifer properties, and thermal modeling efforts indicate that the local aquifer could support system capacity demands for all three case study scenarios presented by MSI. For the next step of project feasibility assessment, well installation and pumping tests should be considered to verify aquifer yields and refine well design and well field configuration.

## 7.0 USE OF THIS REPORT

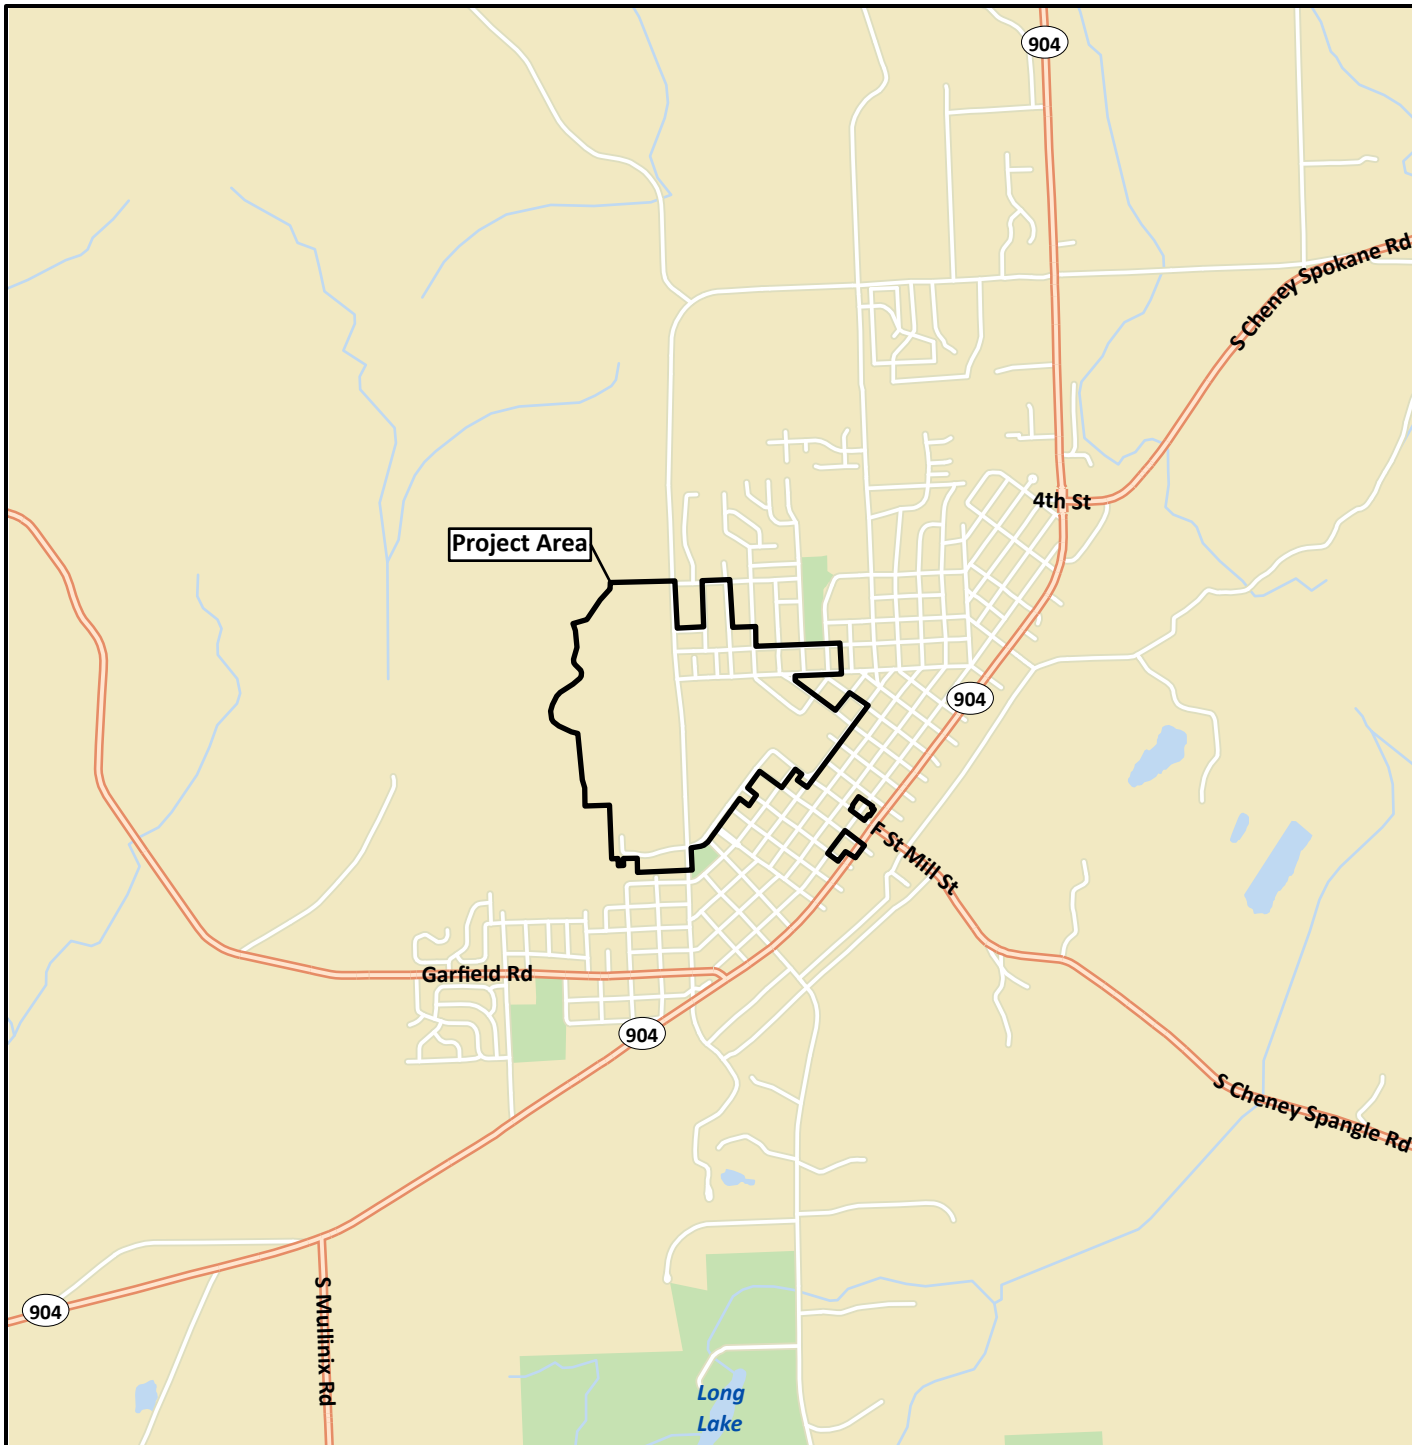

This report has been prepared for the exclusive use of MSI Engineers for specific application to the Eastern Washington University Ground Source Heat Pump Evaluation project. No other party is entitled to rely on the information, conclusions, and recommendations included in this document without the express written consent of Landau. Further, the reuse of information, conclusions, and recommendations provided herein for extensions of the project or for any other project, without review and authorization by Landau, shall be at the user's sole risk. Landau warrants that within the limitations of scope, schedule, and budget, our services have been provided in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions as this project. Landau makes no other warranty, either express or implied.
