Map shows colored Census Block Groups within labeled Census Tracts

2020 Census Hard to Count Areas: Benton County

The Low Response Score is a guide for identifying hard to count geographies. It is generated by a model using 25 influential variables (e.g., age, marital status, ethnicity) that are expected to be associated with low self response. Examining individual characteristics (see OFM online maps) may help in developing an outreach strategy. Keep in mind, the LRS was developed to predict low self response via the mail rather than the internet. Characteristics, such as internet access, and housing change, are not factored into the LRS.

Below is a sample of information available on OFM's '2020 Census Hard to Count resources' webpage: <http://bit.ly/OFM2020htc>

OFM hard-to-count population maps. Maps are available for 19 separate variables at the tract and block group levels: <http://bit.ly/OFM2020Maps>

The full set of variables is available on the OFM and Census Bureau websites in the 'Planning Database': https://www.census.gov/research/data/planning_database/2018

OFM 2020 Census Website: <http://www.ofm.wa.gov/census2020>
